RENESAS 32-Bit MCU
RX Family / RX600 Series

All information contained in these materials, including products and product specifications, represents information on the product at the time of publication and is subject to change by Renesas Electronics Corp. without notice. Please review the latest information published by Renesas Electronics Corp. through various means, including the Renesas Electronics Corp. website (<http://www.renesas.com>).

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.
Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Precaution against Electrostatic Discharge (ESD)

A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity.

Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

2. Processing at power-on

The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

3. Input of signal during power-off state

Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

4. Handling of unused pins

Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

5. Clock signals

After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

6. Voltage application waveform at input pin

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (Max.) and V_{IH} (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (Max.) and V_{IH} (Min.).

7. Prohibition of access to reserved addresses

Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

8. Differences between products

Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems.

The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Disclaimer

By using this Renesas Starter Kit+ (RSK+), the user accepts the following terms:

The RSK+ is not guaranteed to be error free, and the entire risk as to the results and performance of the RSK+ is assumed by the User. The RSK+ is provided by Renesas on an "as is" basis without warranty of any kind whether express or implied, including but not limited to the implied warranties of satisfactory quality, fitness for a particular purpose, title and non-infringement of intellectual property rights with regard to the RSK+. Renesas expressly disclaims all such warranties. Renesas or its affiliates shall in no event be liable for any loss of profit, loss of data, loss of contract, loss of business, damage to reputation or goodwill, any economic loss, any reprogramming or recall costs (whether the foregoing losses are direct or indirect) nor shall Renesas or its affiliates be liable for any other direct or indirect special, incidental or consequential damages arising out of or in relation to the use of this RSK+, even if Renesas or its affiliates have been advised of the possibility of such damages.

Precautions

The following precautions should be observed when operating any RSK+ product:

This Renesas Starter Kit+ is only intended for use in a laboratory environment under ambient temperature and humidity conditions. A safe separation distance should be used between this and any sensitive equipment. Its use outside the laboratory, classroom, study area or similar such area invalidates conformity with the protection requirements of the Electromagnetic Compatibility Directive and could lead to prosecution.

The product generates, uses, and can radiate radio frequency energy and may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment causes harmful interference to radio or television reception, which can be determined by turning the equipment off or on, you are encouraged to try to correct the interference by one or more of the following measures;

- ensure attached cables do not lie across the equipment
- reorient the receiving antenna
- increase the distance between the equipment and the receiver
- connect the equipment into an outlet on a circuit different from that which the receiver is connected
- power down the equipment when not in use
- consult the dealer or an experienced radio/TV technician for help NOTE: It is recommended that wherever possible shielded interface cables are used.

The product is potentially susceptible to certain EMC phenomena. To mitigate against them it is recommended that the following measures be undertaken;

- The user is advised that mobile phones should not be used within 10m of the product when in use.
- The user is advised to take ESD precautions when handling the equipment.

The Renesas Starter Kit does not represent an ideal reference design for an end product and does not fulfil the regulatory standards for an end product.

How to Use This Manual

1. Purpose and Target Readers

This manual is designed to provide the user with an understanding of the CPU Board hardware functionality, and electrical characteristics. It is intended for users designing sample code on the CPU Board platform, using the many different incorporated peripheral devices.

The manual comprises of an overview of the capabilities of the RSK+ product, but does not intend to be a guide to embedded programming or hardware design.

Particular attention should be paid to the precautionary notes when using the manual. These notes occur within the body of the text, at the end of each section, and in the Usage Notes section.

The revision history summarizes the locations of revisions and additions. It does not list all revisions. Refer to the text of the manual for details.

The following documents apply to the RX671 Group. Make sure to refer to the latest versions of these documents. The newest versions of the documents listed may be obtained from the Renesas Electronics Web site.

Document Type	Description	Document Title	Document No.
User's Manual	Describes the technical details of the RSK+ hardware.	Renesas Starter Kit+ for RX671 User's Manual	R20UT4879EG

Renesas Starter Kit+ for RX671

User's Manual

1. Overview

1.1 Purpose

This CPU Board is an evaluation tool for Renesas microcontrollers. This manual describes the technical details of the CPU Board hardware.

1.2 Features

This RSK+ provides an evaluation of the following features:

- Renesas microcontroller programming
- User code debugging
- User circuitry such as switches, LEDs and a potentiometer
- Sample applications
- Sample peripheral device initialisation code

The RSK+ board contains all the circuitry required for microcontroller operation.

1.3 Board specification

Board specification was shown in **Table 1-1** below.

Table 1-1: Board Specification

Item	Specification
Microcontroller	Part No : R5F5671EHDFB ^{*3}
	Package : 144-pin PLQP0144KA-B
	On-Chip Memory : ROM 2MB, RAM 384KB
On-Board Memory	SDRAM: 128Mbit (Data width 16bit)
	I ² C EEPROM: 2Kbit
	SPI Serial Flash: 32Mbit x 2
Input Clock	RX671 Main : 24MHz
	RX671 Sub : 32.768kHz
	RL78/G1C Main: 12MHz
Power Supply	DC Power Jack : 5 V Input
	Power Supply IC : 5V Input, 3.3V Output
	Power Supply IC : 3.3V Input, 3.3V Output(For SDHI)
	Power Supply IC : 5V Input, 5V Output(For USB Host)
Debug Interface	E2 Lite 14-pin box header
DIP Switch	MCU Mode Configuration & Pin Function Selection : 4-pole x 1
Push Switch	Reset Switch x 1
	User Switch x 3
Potentiometer(for ADC)	Single-turn, 10kΩ
LED	5V Power indicator: green x 1
	3.3V Power Indicator : green x 1
	User : green x 1, orange x 1, red x 2
SDHI ^{*1}	SD Card Slot (4-bit) x 1
CAN	Connector : 2.54mm pitch, 3-pin x 1
	CAN Driver x 1
USB	USB0-Function : USB-MiniB
	USB0-Host : USB-TypeA
USB to Serial Converter Interface	Connector : USB-MiniB
	Driver : RL78/G1C Microcontroller (Part No R5F10JBCANA)
Pmod™	PMOD1 : Angle type, 12-pin Connector
	PMOD2 : Angle type, 12-pin Connector
Touch Interface	Slider x 1, Key x 2
SSIE & Audio Interface	Audio codec
	Terminal Block for passive speaker (4-pin)
	Headphone Jack
	Microphone x 2
Battery backup	Coin Cell Holder ^{*4}
Application Board Interface ^{*2}	2.54 mm pitch, 26-pin x 2 (JA1, JA2), 50-pin x 1 (JA3), 24-pin x 2 (JA5, JA6)

^{*1}: The RX671 Group incorporate an SD Host Interface (SDHI) which is compliant with the SD Specifications. When developing host devices that are compliant with the SD Specifications, the user must enter into the SD Host/Ancillary Product License Agreement (SD HALA).

^{*2}: The connector is not included in the product.

^{*3}: R5F5671EHDFB has a built-in security function.

^{*4}: Not fitted.

2. Power Supply

2.1 Requirements

This board has an optional centre positive supply connector using a 2.0mm barrel power jack (PWR). The main power supply connected to PWR should supply a minimum of 10W to ensure full functionality. When the board is connected to another system then that system should supply power to the board.

This CPU board supports one external voltage input. Details of the external power supply connection are shown in **Table 2-1** and **Table 2-2** below. The default power configuration is shown in **bold, blue text**.

Table 2-1: PWR connector Requirements

Connector	Supply voltage
PWR	Input 5VDC

There are RSK+ products which supports the 12V voltage input. Since this board is supporting the 5V voltage input, be careful not to connect the power supply of a high-voltage output accidentally. Moreover, the main power supply connected to PWR should supply a minimum of 10W to ensure full functionality.

Table 2-2: Main Power Supply Requirements

J25 ^{*1} Setting	Supply Source	Board_5V	UC_VCC
Open	PWR connector/JA1-5V/Unregulated_VCC	5V	3.3V
Shorted	VBUS0	5V	3.3V

*1: The connector is not included to a product.

2.2 Power-Up Behaviour

When the RSK+ is purchased, the RSK+ board has the 'Release' build of the example tutorial software pre-programmed into the Renesas microcontroller. Please consult the 'Renesas Starter Kit+ Smart Configurator Tutorial Manual' for further information of this example.

3. Board Layout

3.1 Component Layout

Figure 3-1 below shows the top component layout of the board.

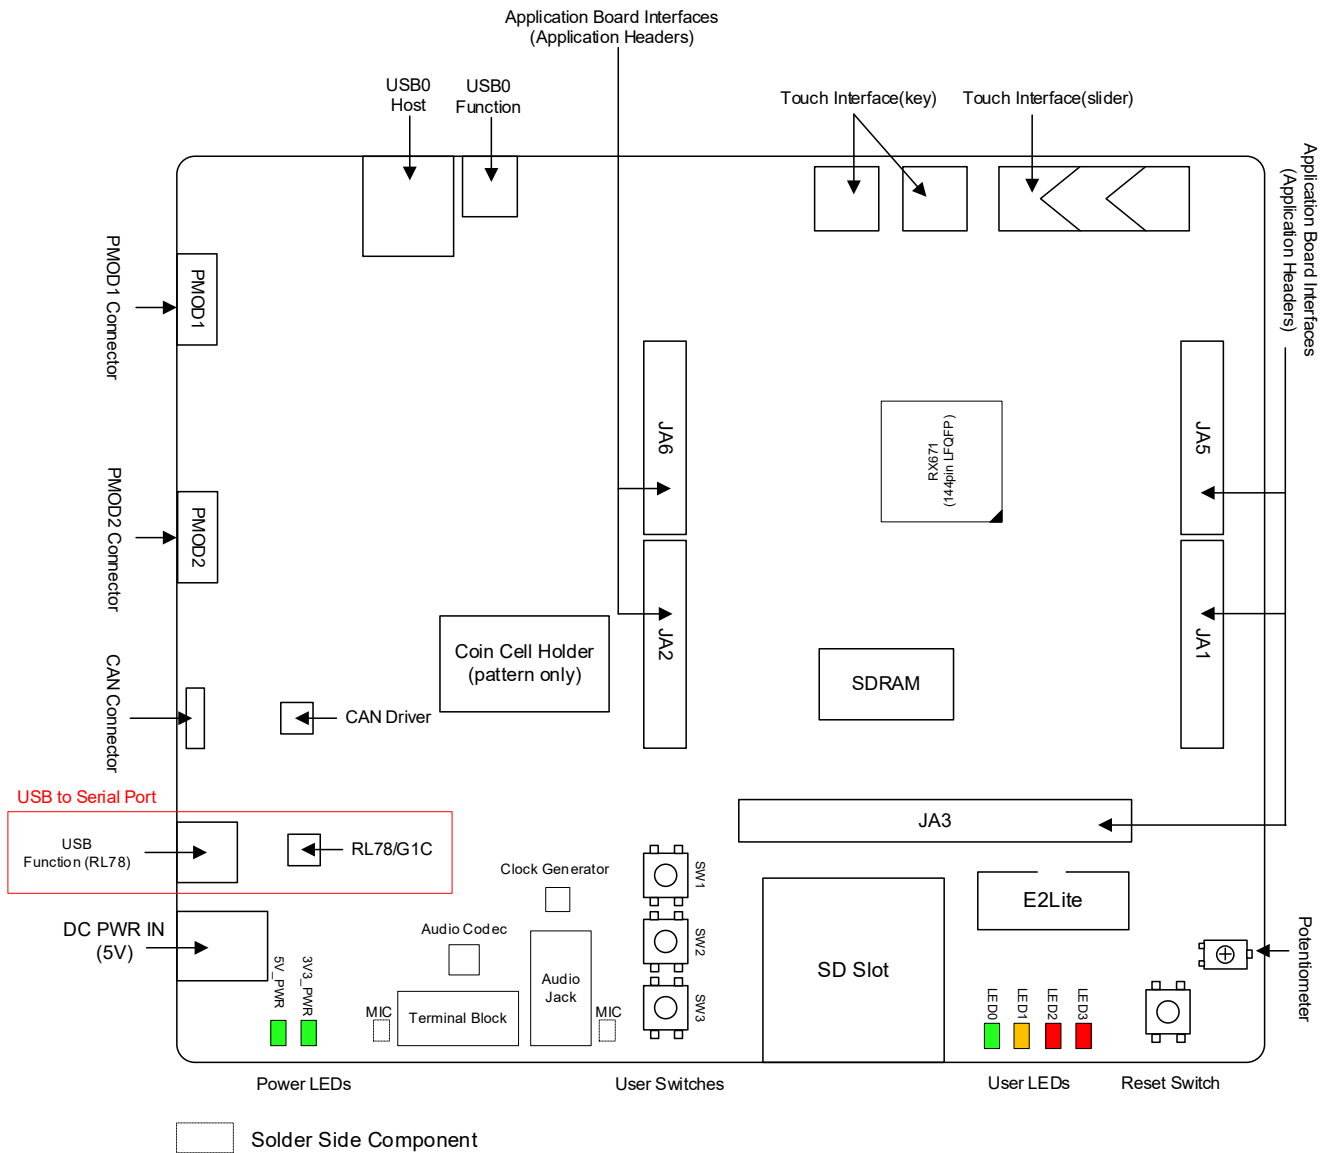

Figure 3-1: Board Layout

3.2 Board Dimensions

Figure 3-2 below gives the board dimensions and connector positions. All the through-hole connectors are on a common 2.54mm pitch grid for easy interfacing.

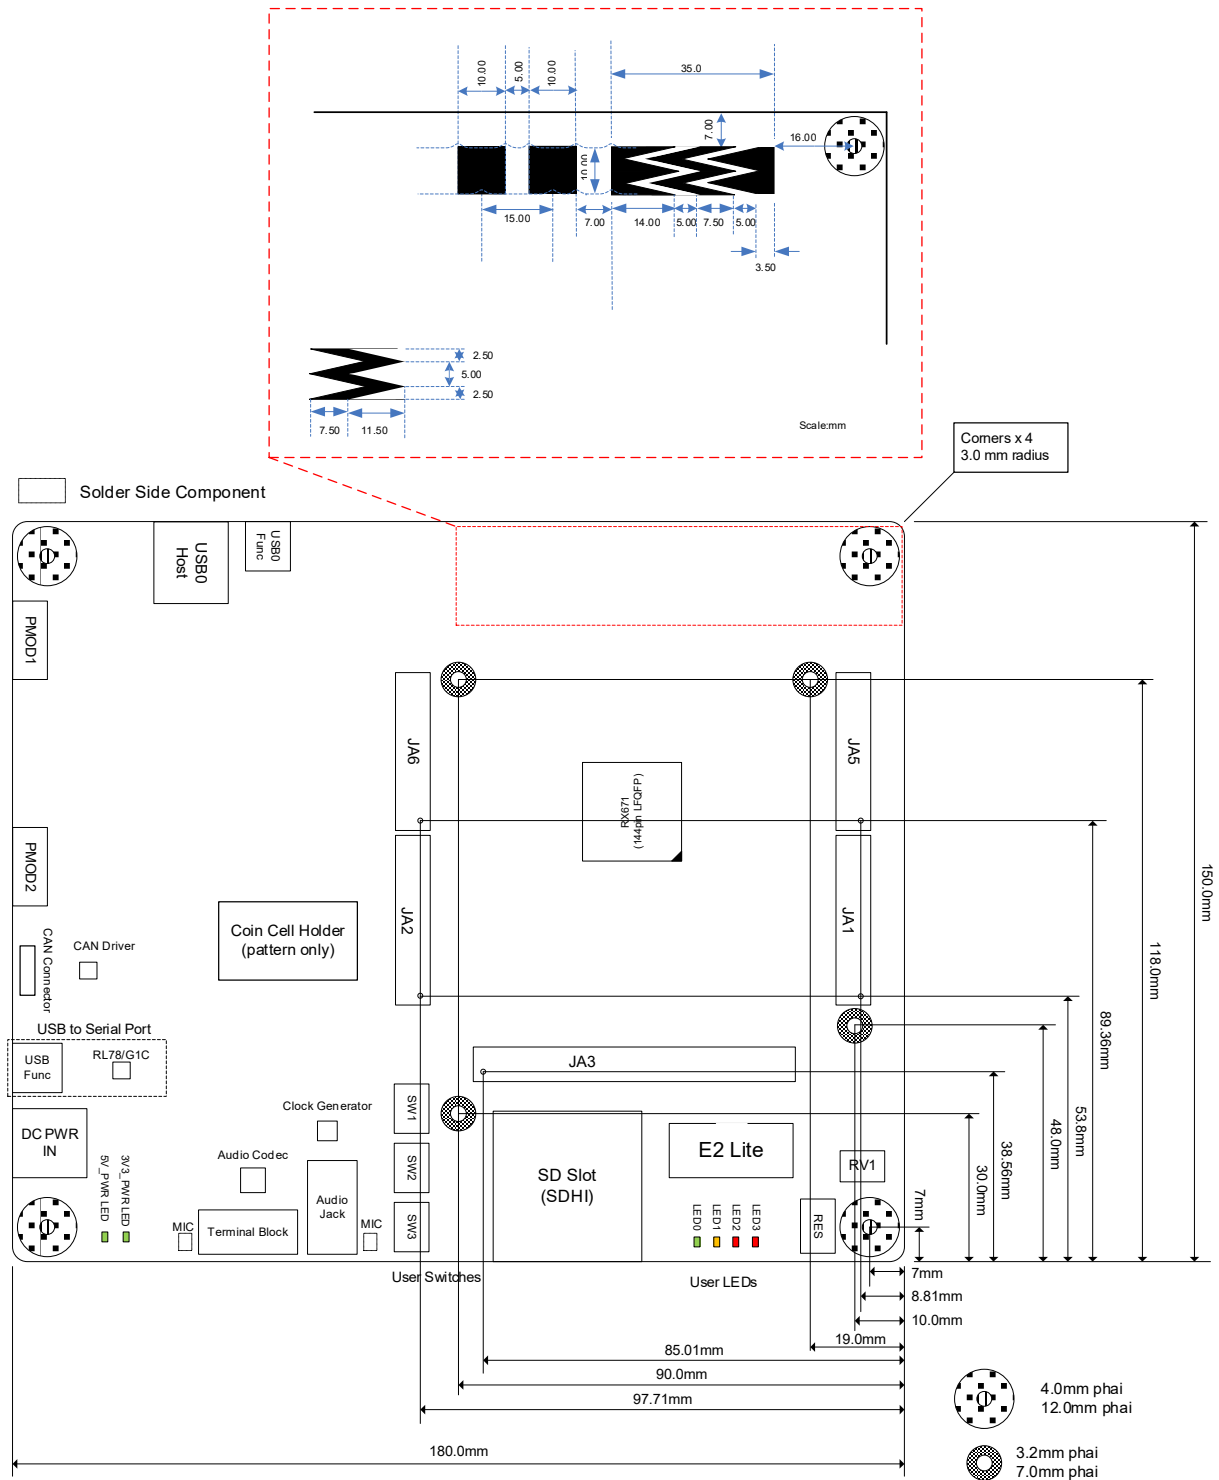

Figure 3-2: Board Dimensions

3.3 Component Placement

Figure 3-3 below shows placement of individual components on the top-side PCB – bottom-side component placement can be seen in Figure 3-4. Component types and values are shown on the board schematics.

Figure 3-3: Top-Side Component Placement

Figure 3-4: Bottom-Side Component Placement

4. Connectivity

4.1 Internal Board Connections

The diagram below shows the CPU board components and their connectivity to the MCU.

Figure 4-1: Internal Board Block Diagram

4.2 Debugger Connections

Figure 4-2 below shows the connections between the CPU board, E2 Lite debugger and the host PC.

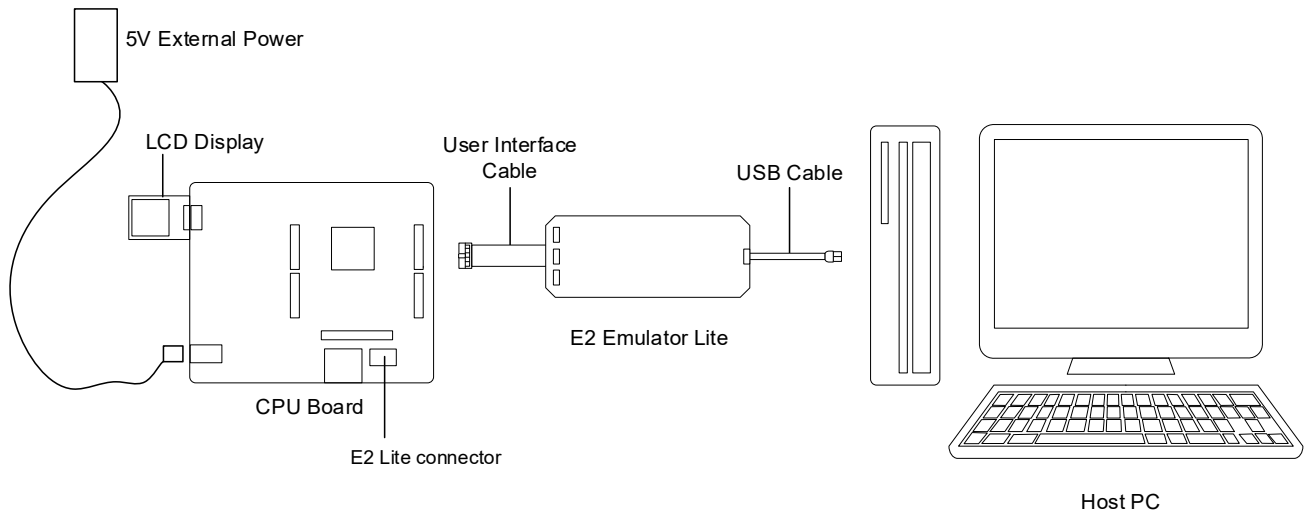

Figure 4-2: Debugger Connection Diagram

5. User Circuitry

5.1 Reset Circuit

A reset control circuit is fitted to the CPU board to generate the required reset signal, and is triggered from the RES switch. Refer to the RX671 Group User's Manual: Hardware for details regarding the reset signal timing requirements, and the CPU board schematics for information regarding the reset circuitry in use on the board.

5.2 Clock Circuit

A clock circuit is fitted to the CPU board to generate the required clock signal to drive the MCU, and associated peripherals. Refer to the RX671 Group Hardware Manual and the RL78/G1C hardware manual for details regarding the clock signal requirements, and the CPU board schematics for information regarding the clock circuitry in use on the CPU board. Details of the oscillators and clock generator fitted to the board are listed in **Table 5-1** and **Table 5-2** below.

Table 5-1: Crystal

Crystal	Function	Default Placement	Frequency	Device Package
X1	Main MCU crystal for RX671	Fitted	24MHz	Encapsulated, SMT
X2	Real time Clock for RX671	Fitted	32.768kHz	Encapsulated, SMT
X3	Main MCU crystal for RL78/G1C	Fitted	12MHz	Encapsulated, SMT

Table 5-2: Clock Generator

Clock Generator	Function	Default Placement	Frequency
U19	Audio clock for RX671 and audio codec	Fitted	24.576MHz

5.3 Switches

There are four switches located on the CPU board. The function of each switch and its connection is shown in **Table 5-3** and **Table 5-4**. For further information regarding switch connectivity, refer to the CPU board schematics.

Table 5-3: Push Switch Connections

Switch	Function	MCU	
		Signal (Port)	Pin
RES	When pressed, the microcontroller is reset.	RES#	19
SW1	Connects to an IRQ9 input for user controls.	P91	129
SW2	Connects to an IRQ10 input for user controls.	P92	128
SW3	Connects to an IRQ15 input for user controls. Connects to an ADTRG0 input for ADC controls.	P07	144

Table 5-4: DIP Switch Connections

Switch		Function	MCU	
			Signal (Port)	Pin
SW4	Pin 1	Refer to section 6.2 for the setting contents.	MD/FINED	16
SW4	Pin 2	Refer to section 6.2 for the setting contents.	PC7	60
SW4	Pin 3	Refer to section 6.3 for the setting contents.	NC	NC
SW4	Pin 4	Refer to section 6.3 for the setting contents.	NC	NC

5.4 LEDs

There are 6 LEDs on the RSK+ board. The function of each LED, its colour, and its connections are shown in **Table 5-5**.

Table 5-5: LED Connections

LED	Colour	Function	MCU	
			Port	Pin
3V3_PWR	Green	Indicates the status of the Board_3V3 power rail.	NC	NC
5V_PWR	Green	Indicates the status of the Board_5V power rail.	NC	NC
LED0	Green	User operated LED.	P17	38
LED1	Orange	User operated LED.	PF5	9
LED2	Red	User operated LED.	P03	4
LED3	Red	User operated LED.	P05	2

5.5 Potentiometer

A single-turn potentiometer is connected as a potential divider to analog input AN000, pin 141. The potentiometer can be used to create a voltage between Board_3V3 and AVSS0.

Refer to the maker site for specification of the potentiometer (VISHAY with part number TS53 series).

The potentiometer offers an easy method of supplying a variable analog input to the microcontroller. It does not necessarily reflect the accuracy of the controller's ADC. Refer to the RX671 Group User's Manual: Hardware for further details.

5.6 Pmod™

The RSK+ board is equipped with connectors for Digilent Pmod™ interface. Please connect the provided LCD module to the PMOD1 connector.

Care should be taken when installing the LCD module to ensure pins are not bent or damaged. The LCD module is vulnerable to electrostatic discharge (ESD); therefore appropriate ESD protection should be used.

The Digilent Pmod™ Compatible headers use an SPI interface. **Figure 5-1** below shows Digilent Pmod™ Compatible Header Pin Numbering. Connection information for the Digilent Pmod™ Compatible header is provided in **Table 5-6** and **Table 5-7** below.

Please note that the connector numbering adheres to the Digilent Pmod™ standard and is different from all other connectors on the RSK designs. Details can be found in the Digilent Pmod™ Interface Specification Revision: November 20, 2011.

Figure 5-1: Digilent Pmod™ Compatible Header Pin Numbering

Table 5-6: Pmod™1 Header Connections

Pin	Pmod™ Interface			MCU	
	Type 2A (SPI)	Type 3A (UART)	Type 6A (I2C)	Port	Pin No.
1	CS	CTS/GPIO	INT	PJ3/CTS6#/IRQ11	13
2	MOSI	TXD	RESET	P00/TXD6/SMOSI6	8
				P02*2	6

11	GND	GND	GND	-	-
12	3V3*1	3V3*1	3V3/5V*1	-	-

*1: This board allows you to choose between 3V3 and 5V, and the default RSK+ configuration is 3V3. Also, 5V can be used only when used as I2C, but signals other than I2C signals must be separated from RX671.

*2: This connection is not available in the default RSK+ configuration - refer to §6 for the required modifications.

*3: TXD0 and RXD0 are special assignments for connecting with Renesas Silex WiFi Pmod.

5.7 USB Serial Port

A USB serial port is implemented in a Renesas low power microcontroller (RL78/G1C) and is connected to the RX671 Serial Communications Interface (SCI) module. Multiple options are provided to allow the selection of the connected SCI6 port. Connections between the USB to Serial converter and the microcontroller are listed in **Table 5-8** below.

Table 5-8: Serial Port Connections

Signal Name	Function	MCU	
		Port	Pin
SERIAL-TXD	SCI1 Transmit Signal. *1	P26	31
	SCI10 Transmit Signal.	P87	39
	External RS232 Transmit Signal. *1	-	-
SERIAL-RXD	SCI1 Receive Signal. *1	P30	29
	SCI10 Receive Signal.	P86	41
	External RS232 Receive Signal. *1	-	-
SERIAL-CTS *2	Clear To Send.	P15	42
SERIAL-RTS *2	Request To Send.	P55	51

*1: This connection is a not available in the default RSK+ configuration - refer to §6 for the required modifications.

*2: Flow control is a signal provided for expansion and is not currently supported. There is no schedule of function expansion at present.

When the CPU board is first connected to a PC running Windows™ with the USB/Serial connection, the PC will look for a driver. This driver is installed during the installation process, so the PC should be able to find it. The PC will report that it is installing a driver and then report that a driver has been installed successfully, as shown in **Figure 5-2**. The exact messages may vary depending upon operating system.

Figure 5-2: USB-Serial Windows™ Installation message

If you do not have the driver, please download the driver installer from the following URL.

<https://www.renesas.com/document/rsk-usb-serial-driver?language=en>

5.8 Controller Area Network (CAN)

A CAN transceiver IC is fitted to the RSK+ board, and connected to the CAN MCU peripheral. For further details regarding the CAN protocol and supported modes of operation, please refer to the RX671 Group User’s Manual: Hardware. The connections for the CAN microcontroller signals are listed in **Table 5-9** below.

Table 5-9: CAN Connections

CAN Signal	Function	MCU	
		Port	Pin
CAN-TX	CAN Data Transmission.	P32	27
JA5-CAN1TX *1			
CAN-RX	CAN Data Reception.	P33	26
JA5-CAN1RX *1			

*1: This connection is a not available in the default RSK+ configuration - refer to §6 for the required modifications.

5.9 Universal Serial Bus (USB)

This CPU board is fitted with a USB Host socket (type A) and a Function socket (type Mini B). USB module USB0 is connected to the Host and Function socket, and can operate as either a Host or Function device. The connection for the USB0 module is shown in **Table 5-10** below.

Table 5-10: USB0 Module Connections

USB Signal	Function	MCU	
		Port	Pin
USB0-DP	D+ I/O pin of the USB on-chip transceiver	PH1	48
USB0-DM	D- I/O pin of the USB on-chip transceiver	PH2	47
USB0-VBUS	USB cable connection monitor pin	P16	40
USB0-VBUSEN *1	VBUS (5V) supply enable signal for external power supply chip		
USB0-OVRCURA	External overcurrent detection signals A	P14	43

*1: This connection is not available in the default RSK+ configuration - refer to §6 for the required modifications.

5.10 External Bus

The RX671 features an external data bus, which is connected to various devices on the CPU board. Details of the devices connected to the external data bus are listed in **Table 5-11** below. Further details of the devices connected to the external bus can be found in the board schematics.

Table 5-11: External Bus Address Space

Chip Select	Device Name	Device Description	Address Space
CS0	JA3	Application Header	FF000000h – FFFFFFFFh (16Mbyte)
SDCS(SDRAM-SDCSn)	U10	128Mbit SDRAM	08000000h – 0FFFFFFFh (128Mbyte)
SDCS(JA3-CSb)	JA3	Application Header	08000000h – 0FFFFFFFh (128Mbyte)
CS1 – CS2	-	Unused	06000000h – 07FFFFFFh (2 x 16Mbyte)
CS3(JA3-CSc)	JA3	Application Header	05000000h – 05FFFFFFh (16Mbyte)
CS4 – CS7	-	Unused	01000000h – 04FFFFFFh (4 x 16Mbyte)

5.11 SDRAM

The RX671 features an SDRAM controller. It is connected to SDRAM on the CPU board with a 16-bit width. **Table 5-12** gives an Overview of the onboard SDRAM.

Table 5-12: Overview of the onboard SDRAM

Specification	Contents
Type name	MT48LC8M16A2P-6A
Constitution	2Meg x 16 x 4 bank
Capacity	128Mbit
Row address	12bit
Column address	9bit
Number of banks	4
Auto refresh period (tRFC)	Min. 60ns
Initialization auto refresh count	2
Precharge command period (tRP)	Min. 18ns
Auto refresh request interval	15.625us (64ms/4096)
CAS latency (CL)	2 or 3
Write recovery period (tWR)	Min. 12ns
ACTIVE-to-PRECHARGE command period (tRAS)	Min. 42ns
ACTIVE-to-READ or WRITE delay (tRCD)	Min. 18ns

When accessing SDRAM on the CPU board, make the following settings regardless of the operating frequency of the SDRAM clock. **Table 5-13** shows the On-board SDRAM settings.

Table 5-13: On-board SDRAM settings

Register name	Setting values	Setting details
Drive Capacity Control Register (PORTA.DSCR)	0b00000000	Normal drive output
Drive Capacity Control Register (PORTB.DSCR)		
Drive Capacity Control Register (PORTD.DSCR)		
Drive Capacity Control Register (PORTE.DSCR)		

5.12 RSPI

The RX671 features Serial Peripheral Interface (RSPI_D and RSPI_A). RSPI₀/RSPI_A is connected to a 64Mbit Serial Flash. **Table 5-14** below details the connected devices, and their connections to the MCU.

Table 5-14: RSPI Connections

RSPI Signal	Function	MCU	
		Port	Pin
RSPI-CS ^{*1}	Chip Select	PA4	92
RSPI-CLK ^{*1}	Clock	PA5	90
RSPI-MOSI ^{*1}	Master out slave in data	PA6	89
RSPI-MISO ^{*1}	Master in slave out data	PA7	88

^{*1}: This connection is a not available in the default RSK+ configuration - refer to §6 for the required modifications.

5.13 QSPIX

The RX671 features one Quad Serial Peripheral Interface (QSPIX). **Table 5-15** below details the connected device, and its connection to the MCU.

Table 5-15: QSPI Connections

QSPI signal	Function	MCU	
		Port	Pin
QSPI-CS ^{*1}	Chip Select	PD4	122
QSPI-CLK ^{*1}	Clock	PD5	121
QSPI-IO0 ^{*1}	I/O Data0	PD6	120
QSPI-IO1 ^{*1}	I/O Data1	PD7	119
QSPI-IO2 ^{*1}	I/O Data2	PD2	124
QSPI-IO3 ^{*1}	I/O Data3	PD3	123

^{*1}: This connection is a not available in the default RSK+ configuration - refer to §6 for the required modifications.

5.14 Inter-IC Bus (I²C Bus)

The RX671 features I²C (Inter-IC Bus) interface (RIIC_A) and High-Speed I²C (Inter-IC Bus) Interface (RIICH_S). RIIC₀/RIICH_S is connected to a 2Kbit EEPROM. When using RIICH_S high speed mode, add 2KΩ pull-up resistors to each of the SCL and SDA lines. **Table 5-16** below details the connected device, and their connection to the MCU.

Table 5-16: I²C Bus Connections

I ² C Bus signal	Function	MCU	
		Port	Pin
E2P-SDA	Data	P13	44
E2P-SCL	Clock	P12	45

5.15 SD Host Interface (SDHI)

A SD Card Slot is fitted to the CPU board, and connected to the SD Host Interface (SDHI) MCU peripheral. For further details regarding the SDHI operation, please refer to the RX671 Group User's Manual: Hardware. The connections for the SDHI signals are listed in **Table 5-17** and **Table 5-18** below.

Table 5-17: SDHI Connections (1)

SD Card Slot (SDHI)							
Pin	Circuit Net Name	MCU		Pin	Circuit Net Name	MCU	
		Port	Pin			Port	Pin
1	SDHI-D3 ^{*1}	PD3	123	2	SDHI-CMD ^{*1}	PD4	122
3	GROUND	-	-	4	SDHI-VCC	-	-
5	SDHI-CLK ^{*1}	PD5	121	6	GROUND	-	-
7	SDHI-D0 ^{*1}	PD6	120	8	SDHI-D1 ^{*1}	PD7	119
9	SDHI-D2 ^{*1}	PD2	124	10	SDHI-CD ^{*1}	PE6	102
11	GROUND	-	-	12	SDHI-WP ^{*1}	PE7	101

*1: This connection is not available in the default RSK+ configuration - refer to §6 for the required modifications.

Table 5-18: SDHI Connections (2)

SDHI signal	Function	MCU	
		Port	Pin
SDHI-PE	SDHI-VCC enable control	P73	77
SDHI-POWFLT	Fault monitor of SDHI-VCC	P60	117

5.16 Serial Sound Interface (SSIE) & Audio Interface

The RX671 features an Serial Sound Interface (SSIE) module. The SSIE is connected to an audio interface. The connections for the SSIE signals are listed in **Table 5-19**, **Table 5-20** and **Table 5-21** below.

Table 5-19: SSIE Connections (Clock Generator)

SSIE Signal	Function	MCU	
		Port	Port
SSI-AUDIOCLK	Audio Clock	P22	35

Table 5-20: SSIE Connection (Audio Codec)

SSIE Signal and Miscellaneous	Function	MCU	
		Port	Port
SSI-LRCK	LR Clock	PC6	61
SSI-SCK	Bit Clock	PC5	62
SSI-TXD	Data Output	PC7	60
AUDIO-SCL	Control Interface Clock	P76	69
AUDIO-SDA	Control Interface Data	P77	68

Table 5-21: SSIE Connection (Microphone)

SSIE Signal	Function	MCU	
		Port	Port
SSI-LRCK	LR Clock	PC6	61
SSI-SCK	Bit Clock	PC5	62
SSI-RXD	Data Input	P20	37

5.17 Touch Interface

The RSK+ Board is fitted with a Touch Interface (slider x 1, key x2). The connections for the Touch Interface signals are listed in **Table 5-22** below.

Table 5-22: Touch Interface Connections

Touch Interface signal	Function	MCU	
		Port	Pin
TS6	Electrostatic capacitive measurement pin (touch slider)	P23	34
TS5	Electrostatic capacitive measurement pin (touch slider)	P24	33
TS4	Electrostatic capacitive measurement pin (touch slider)	P25	32
TS9	Electrostatic capacitive measurement pin (touch key)	P20	37
TS8	Electrostatic capacitive measurement pin (touch key)	P21	36
TSCAP	LPF (Low-pass filter) connection pin	PC4	66

6. Configuration

6.1 Modifying the RSK+

This section lists the option links that are used to modify the way CPU board operates in order to access different configurations. Configurations are made by modifying link resistors or headers with movable jumpers or by configuration DIP switches

A link resistor is a 0Ω surface mount resistor, which is used to short or isolate parts of a circuit. Option links are listed in the following sections, detailing their function when fitted or removed. **Bold, blue text** indicates the default configuration that the CPU board is supplied with. Refer to the component placement diagram (§3) to locate the option links, jumpers and DIP switches.

When removing soldered components, always ensure that the CPU board is not exposed to a soldering iron for intervals greater than 5 seconds. This is to avoid damage to nearby components mounted on the board.

When modifying a link resistor, always check the related option links to ensure there is no possible signal contention or short circuits. Because many of the MCU's pins are multiplexed, some of the peripherals must be used exclusively. Refer to the RX671 Group User's Manual: Hardware and CPU board schematics for further information.

6.2 MCU Operating Modes

Table 6-1 below details the option links associated with configuring the MCU Operating Modes.

Table 6-1: MCU Operating Modes Switch Settings

SW4 Pin1	SW4 Pin2	J24 *1	Explanation	Related Ref.
OFF	OFF(don't care)	OFF(don't care)	Single Chip Mode	R256, R255
OFF	OFF(don't care)	OFF(don't care)	FINE Boot Mode *2	R256, R255
ON	OFF	OFF(don't care)	SCI Boot Mode	R256, R255
ON	ON	Open	USB Boot Mode (Bus-powered)	R256, R255
		Shorted	USB Boot Mode (Self-powered)	R256, R255

*1: Jumper J24 are not mounted on the board at the time of product shipment.

*2: To use the FINE interface, mode control by the E2 Lite debugger is required.

6.3 BUS Switch Configuration

Table 6-2 below details the option links associated with configuring the BUS Switch Configuration.

Table 6-2: BUS Switch Configuration

SW4 Pin3	SW4 Pin4	Available Feature
OFF	OFF	SDRAM
OFF	OFF	RSPI, QSPI
OFF	ON	N/A (Do not select)
ON	ON	RSPI, SDHI

6.4 E2 Lite Debugger Configuration

Table 6-3 below details the function of the option links associated with E2 Lite Debugger Configuration.

Table 6-3: E2 Lite Debugger Configuration Option Links

Signal name	MCU		MCU Peripheral Selection			Destination Selection		
	Pin	Port	Signal	Fit	DNF	Interface /Function	Fit	DNF
PC7	60	PC7	UB	R256	-	SW4.2	-	-

						J27.2	-	-
MD_FINED	16	-	MD_FINED	-	-	E2Lite.7	-	-
						SW4.1	-	-

Table 6-4 below details the function of the jumpers associated with the E2 Lite Debugger.

Table 6-4: E2 Lite Debugger Configuration Jumper Settings

Reference	Jumper Position	Explanation	Related Ref.
J27(DNF) *1	Shorted Pin1-2	Enable E2 Lite debugging with Hot plug-in function.	-
	Shorted Pin2-3	Enable E2 Lite normal debugging and MCU single operation (without E2 Lite).	R259
	All open	DO NOT SET.	-

*1: Jumper J27 is not fitted on the default CPU board. Same as Jumper Position "shorted pin2-3" setting by resistor R259.

6.5 Power Supply Configuration

Table 6-5 below details the function of the option links associated with Power Supply Configuration.

Table 6-5: Power Supply Configuration Option Links

Reference	Explanation	Fit	DNF	Related Ref.
VBUS0	Connect 5V Power rail to VBUS0.	J25.Short, J8.Pin1-2	-	U8.1, U8.2
Unregulated_VCC	Connect 5V power rail to Unregulated_VCC.	R251	-	U8.1, U8.2
JA1-5V	Connect 5V power rail to JA1-5V.	R250	-	U8.1, U8.2
USB_5V	Connect 5V power rail to USB_5V.	R252	-	U15.2, U15.3
Board_5V	Connect 5V power rail to Board_5V.	-	-	J14, J16, R156
SD_3V3	Connect 3.3V power rail to SD_3V3.	R267	-	U11.2, U11.3
JA1-3V3	Connect 3.3V power rail to JA1-3V3.	R266	-	JA1.3
Board_3V3	Connect 3.3V power rail to Board_3V3.	-	-	J14, J16, R159
UC_VCC	Connect 3.3V power rail to UC_VCC.	J28.Short or R268	-	U1, R83, R176, R180, R269, J29
	Enable current probe for measurement MCU current consumption.	-	J28.Open, R268	U1, R83, R176, R180, R269, J29
VBATT	Connect UC_VCC power rail to VBATT.	R269 or J29.Pin1-2	-	U1
	J30 connected to VBATT of MCU	J29.Pin2-3	R269	U1

Table 6-6 below details the function of the jumpers associated with the Power Supply Configuration.

Table 6-6: Power Supply Configuration Jumper Settings

Reference	Jumper Position	Explanation	Related Ref.
J28(DNF) *1	Shorted	Connect 3.3V power rail to UC_VCC.	R268
	All open	Enable current probe for measurement MCU current consumption.	
J25(DNF) *2	Shorted	Enable VBUS0.	J8
	All open	Disable VBUS0	J8

*1: Jumper J28 is not fitted on the default CPU board. Fitting resistor R268 has the same effect as "shorting" jumper J28.

*2: Jumper J25 is not fitted on the default CPU board.

6.6 Clock Configuration

Table 6-7 below details the function of the option links associated with Clock Configuration.

Table 6-7: Clock Configuration Option Links

8. Code Development

8.1 Overview

For all code debugging using Renesas software tools, the RSK+ board must be connected to a PC via an E2 Lite debugger. An E2 Lite debugger is supplied with this RSK+ product.

For further information regarding the debugging capabilities of the E2 Lite debuggers, refer to E1/E20 Emulator, E2 Emulator Lite Additional Document for User's Manual (R20UT0399EJ).

8.2 Compiler Restrictions

The compiler supplied with this RSK+ is fully functional for a period of 60 days from first use. After the first 60 days of use have expired, the compiler will default to a maximum of 128k code and data. To use the compiler with programs greater than this size you need to purchase the full tools from your distributor.

The protection software for the compiler will detect changes to the system clock. Changes to the system clock back in time may cause the trial period to expire prematurely.

8.3 Mode Support

The MCU supports Single Chip and Boot Modes (SCI and USB and FINE), which are configured on the RSK+ board. Details of the modifications required can be found in §6.2. All other MCU operating modes are configured within the MCU's registers, which are listed in the RX671 Group User's Manual: Hardware.

Only ever change the MCU operating mode whilst the RSK+ is in reset, or turned off; otherwise the MCU may become damaged as a result.

8.4 Debugging Support

The E2 Emulator Lite (as supplied with this RSK+) supports break points, event points (including mid-execution insertion) and basic trace functionality. It is limited to a maximum of 8 on-chip event points, 256 software breaks and 256 branch/cycle trace. For further details, refer E2 Emulator Lite User's Manual (R20UT3240EJ).

8.5 Address Space

For the MCU address space details, refer to the 'Address Space' section of RX671 Group User's Manual: Hardware.

8.6 Note of Flash Access Window Setting Register

This register is used to set the write protection flag and start-up area select flag for setting the flash access window start address, flash access window end address, and access window.

Once 0 is written to this bit, the bit can never be restored to 1.

Therefore, the access window and the BTFLG bit will never be set again. If set the TM function will never be disabled, once enabled. Exercise extra caution when handling the FSPR bit.

For details, refer to Section 7.2.9 in the RX671 Group User's Manual: Hardware.

9. Additional Information

Technical Support

For information about the RX671 Group microcontrollers refer to the 'RX671 Group Manual: Hardware'.

For information about the RX assembly language, refer to the 'RX Family User's Manual: Software'.

Technical Contact Details

Please refer to the contact details listed in section 8 of the "Quick Start Guide"

General information on Renesas microcontrollers can be found on the Renesas website at:
