

R-Car Proactive Partner Solution

Ubiquitous QuickBoot

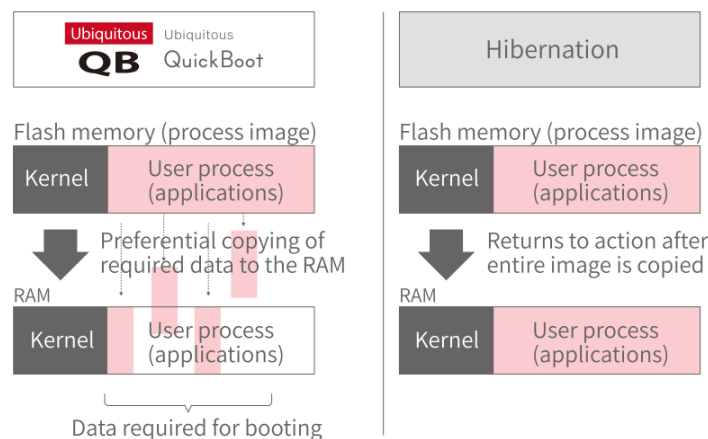

Solution Summary

Ubiquitous QuickBoot can boot any device based on Linux/Android in seconds - no more waiting. QuickBoot utilizes advanced hibernation technology to nearly instantaneously bring your device back to life from a complete power down state. QuickBoot analyzes system memory and determines the most efficient way to restore the system to a fully booted state.

Features/Benefits

- Secure Boot Compatibility
- Increased Performance
- Optimization for application
- Open Source
- Android support

Diagrams/Graphics

Target Markets and Applications

- Automotive
- Consumer electronics
- Home appliance
- Industrial
- MFP/Printer
- Smart home
- IoT devices
- Healthcare

Ubiquitous AI

Company Overview

Ubiquitous AI is a company that provides technologies and services required by manufacturing industry customers. Drawing on its results over many years in the embedded software industry, the company has been successful in the sale of its own proprietary products as well as software products from foreign sources and of related services. While making use of the superior leading-edge technologies and a broad and solid customer base that are its strengths, the company is building a business platform in cooperation with venture firms, startups, and academic entities, and by continuing to deploy throughout the world technologies and services that are needed by its manufacturing industry clients, Ubiquitous AI will contribute to further growth of its customers, its business partners, and society.
