

### GENERAL DESCRIPTION

This document describes the specifications for the IDTF1102 Zero-Distortion™ RF to IF Downconverting Mixer. This device is part of a series of downconverting mixers covering all UTRA bands. See the Part# Matrix for the details of all devices in the series.

The F1102 dual channel device operates with a single 5V supply. It is optimized for operation in a Multi-carrier BaseStation Receiver for RF bands from 698 to 915 MHz with High or Low Side Injection. IF frequencies from 50 to 300 MHz are supported. The F1102 also supports the 400 MHz RF bands with some simple external matching modifications (see page 25). Nominally, the device offers +43 dBm Output IP3 with 330 mA of I<sub>CC</sub>. Alternately one can adjust 4 resistor values and a toggle pin to run the devices in low current mode (LC mode) with +36 dBm Output IP3 and 235 mA of I<sub>CC</sub>.

### COMPETITIVE ADVANTAGE

In typical basestation receivers the mixer limits the linearity performance for the entire receive system. The F1102 with Zero-Distortion technology dramatically improves the maximum IM<sub>3</sub> interference that the BTS can withstand at a desired Signal to Noise Ratio (SNR.) Alternately, one can run the device in LC Mode to reduce Power consumption significantly.

- ✓ IP<sub>3O</sub>: ↑ **7 dB** STD Mode, ↑ **3 dB** LC Mode
- ✓ Dissipation: ↓ **40%** LC Mode, ↓ **12%** STD Mode
- ✓ Allows for higher RF gain improving **Sensitivity**

### FEATURES

- Dual Path for Diversity Systems
- Ideal for Multi-Carrier Systems
- 9.0 dB Gain
- Ultra linear:
  - **+43 dBm IP<sub>3O</sub> (STD Mode)**
  - +36 dBm IP<sub>3O</sub> (LC Mode)
- Low NF < 10 dB
- Extended LO level range for MIMO (-6 dBm)
- 200 Ω output impedance
- Ultra high +13 dBm P1dB<sub>I</sub>
- **Pin Compatible** with existing solutions
- 6x6 36 pin package
- **Power Down mode**
- < 200 nsec settling from Power Down
- Minimizes Synth pulling in Standby Mode
- Low Current Mode : **I<sub>CC</sub> = 235 mA**
- Standard Mode: I<sub>CC</sub> = 330 mA

### DEVICE BLOCK DIAGRAM

### PART# MATRIX

Part#	RF freq range	UTRA bands	IF freq range	Typ. Gain	Injection
F1100	698 - 915	5,6,8,12,13,14,17,19,20	150 - 450	8.3	High Side
<b>F1102</b>	<b>400 - 1000</b>	<b>5,6,8,12,13,14,17,19,20</b>	<b>50 - 300</b>	<b>9.0</b>	<b>Both</b>
F1150 <sup>2</sup>	1700 - 2200	1,2,3,4,9,10, 33, 34,35, 36, 37,39	50 - 450	8.5	High Side
F1152	1400 - 2200	1,2,3,4,9,10, 21 <sup>1</sup> , 24 <sup>1</sup> , 33, 34,35, 36, 37,39	50 - 350	8.5	Low Side
F1162	2300 – 2700	7,38,40,41 <sup>2</sup>	50 – 500	8.8	Low Side

1 - with High side injection  
2 - With High side or Low side injection

### ORDERING INFORMATION

**ABSOLUTE MAXIMUM RATINGS**

VCC to GND	-0.3V to +5.5V
STBY, LC <sub>MODE</sub>	-0.3V to (VCC <sub>-</sub> + 0.3V)
IF_A+, IF_B+, IF_A-, IF_B-, LO1_ADJ, LO2_ADJ	-0.3V to (VCC <sub>-</sub> + 0.3V)
LO_IN, LO_IN_ALT, RF_A, RF_B	-0.3V to +0.3V
IF_BiasA, IF_BiasB to GND	-0.3V to +0.3V
RF Input Power (RF_A, RF_B)	+20dBm
Continuous Power Dissipation	2.2W
$\theta_{JA}$ (Junction – Ambient)	+35°C/W
$\theta_{JC}$ (Junction – Case) The Case is defined as the exposed paddle	+2.5°C/W
Operating Temperature Range (Case Temperature)	T <sub>C</sub> = -40°C to +100°C
Maximum Junction Temperature	150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s) .	+260°C

*Stresses above those listed above may cause permanent damage to the device. Functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.*

**IDTF1102 SPECIFICATION (400 – 1000 MHz MIXER w/HIGH OR LOW SIDE INJECTION)**

Specifications apply at  $V_{CC} = +5.0V$ ,  $F_{RF} = 850 \text{ MHz}$ ,  $F_{IF} = 200 \text{ MHz}$ , Hi-Side,  $P_{LO} = 0 \text{ dBm}$ ,  $T_C = +25^\circ\text{C}$ ,  $STBY = GND$ ,  $LC_{MODE} = V_{IH}$  (STD Mode), EVKit BOM = Standard Mode, Transformer Loss included (not de-embedded) unless otherwise noted.

Parameter	Comment	Symbol	min	typ	max	units
Logic Input High	For Standby, $LC_{MODE}$ Pins	$V_{IH}$	<b>2</b>			V
Logic Input Low	For Standby, $LC_{MODE}$ Pins	$V_{IL}$			<b>0.8</b>	V
Logic Current	For Standby Pin	$I_{IH}, I_{IL}$	<b>-30</b>		<b>+30</b>	$\mu\text{A}$

**Notes:**

- 1 – Items in min/max columns in **bold italics** are Guaranteed by Test
- 2 – All other Items in min/max columns are Guaranteed by Design Characterization
- 3 – Normal RF range is 698 – 915 MHz. See Page 25 for modifications for 400 – 500 MHz operation

**TYPICAL OPERATING CONDITIONS**

Unless otherwise Noted, the following Apply to the Typ Ops Graphs

- 800 KHz Tone Spacing
- High Side injection graphs with 200MHz IF (pages 6 – 10)
- Low Side injection graphs with 150MHz IF (pages 11 – 14)
- Average of Channel A & Channel B
- Pin = – 10 dBm per Tone
- LO port = Pin 19 (Main Port)
- Listed Temperatures are Case Temperature ( $T_C$  or  $T_{CASE}$  = Case Temperature)
- Where noted,  $T_A$  or  $T_{AMB}$  = Ambient Temperature
- Transformer losses are de-embedded

Gain Distribution (F<sub>RF</sub> = 915 MHz, LC mode, N = 1598)

**PINOUTS**

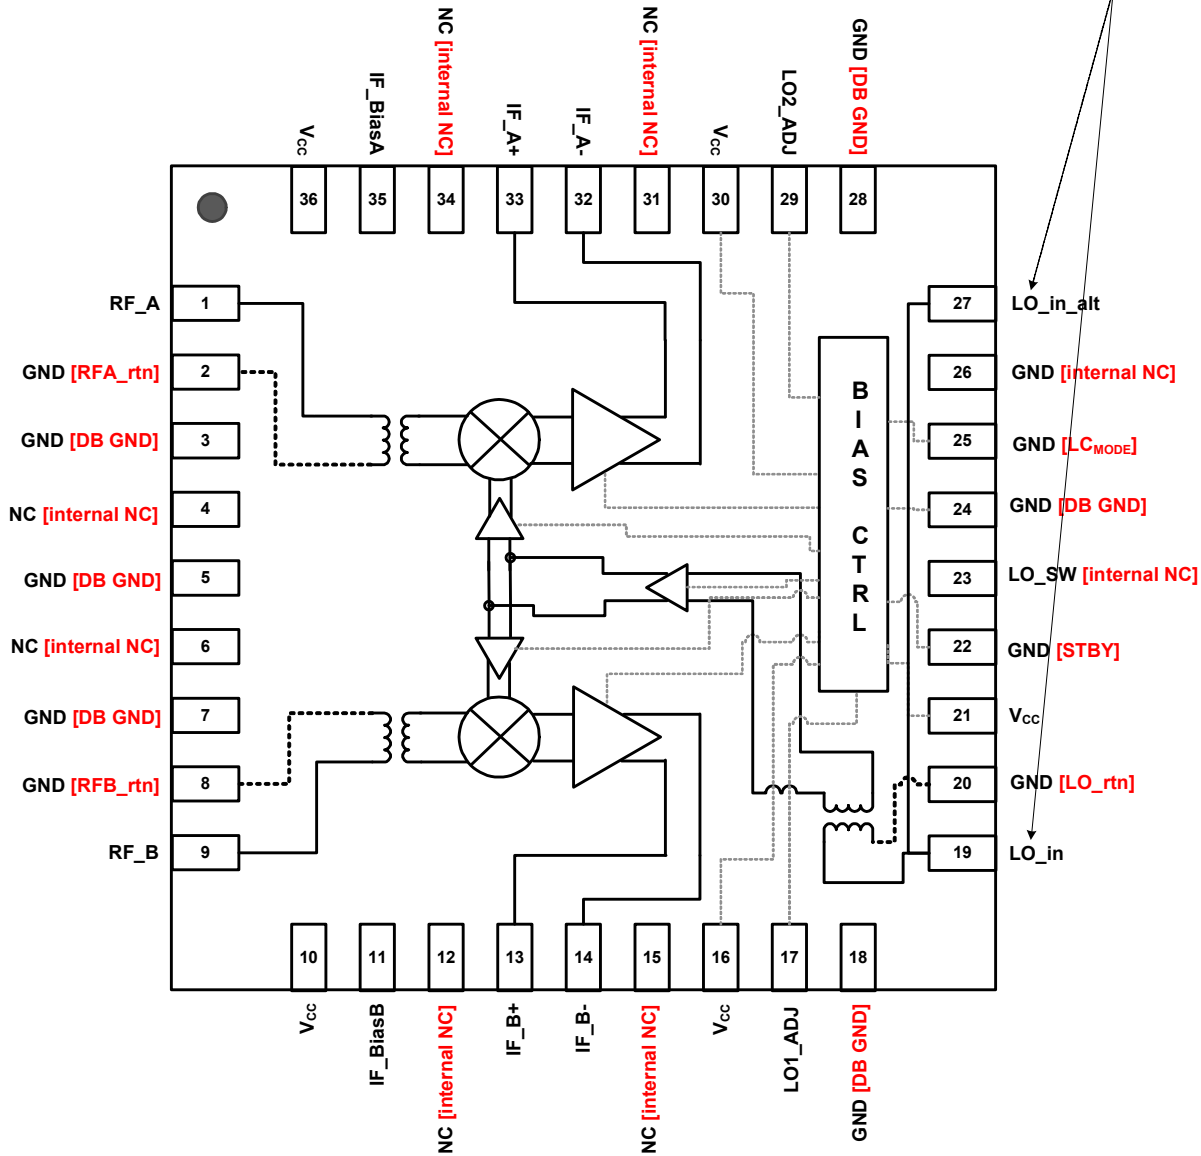

Black Text denotes recommended external connection

Red Text denotes internal Function or Connection

- DB GND = Downbonded to Paddle
- Internal NC = Pin not connected

**Please Note!**

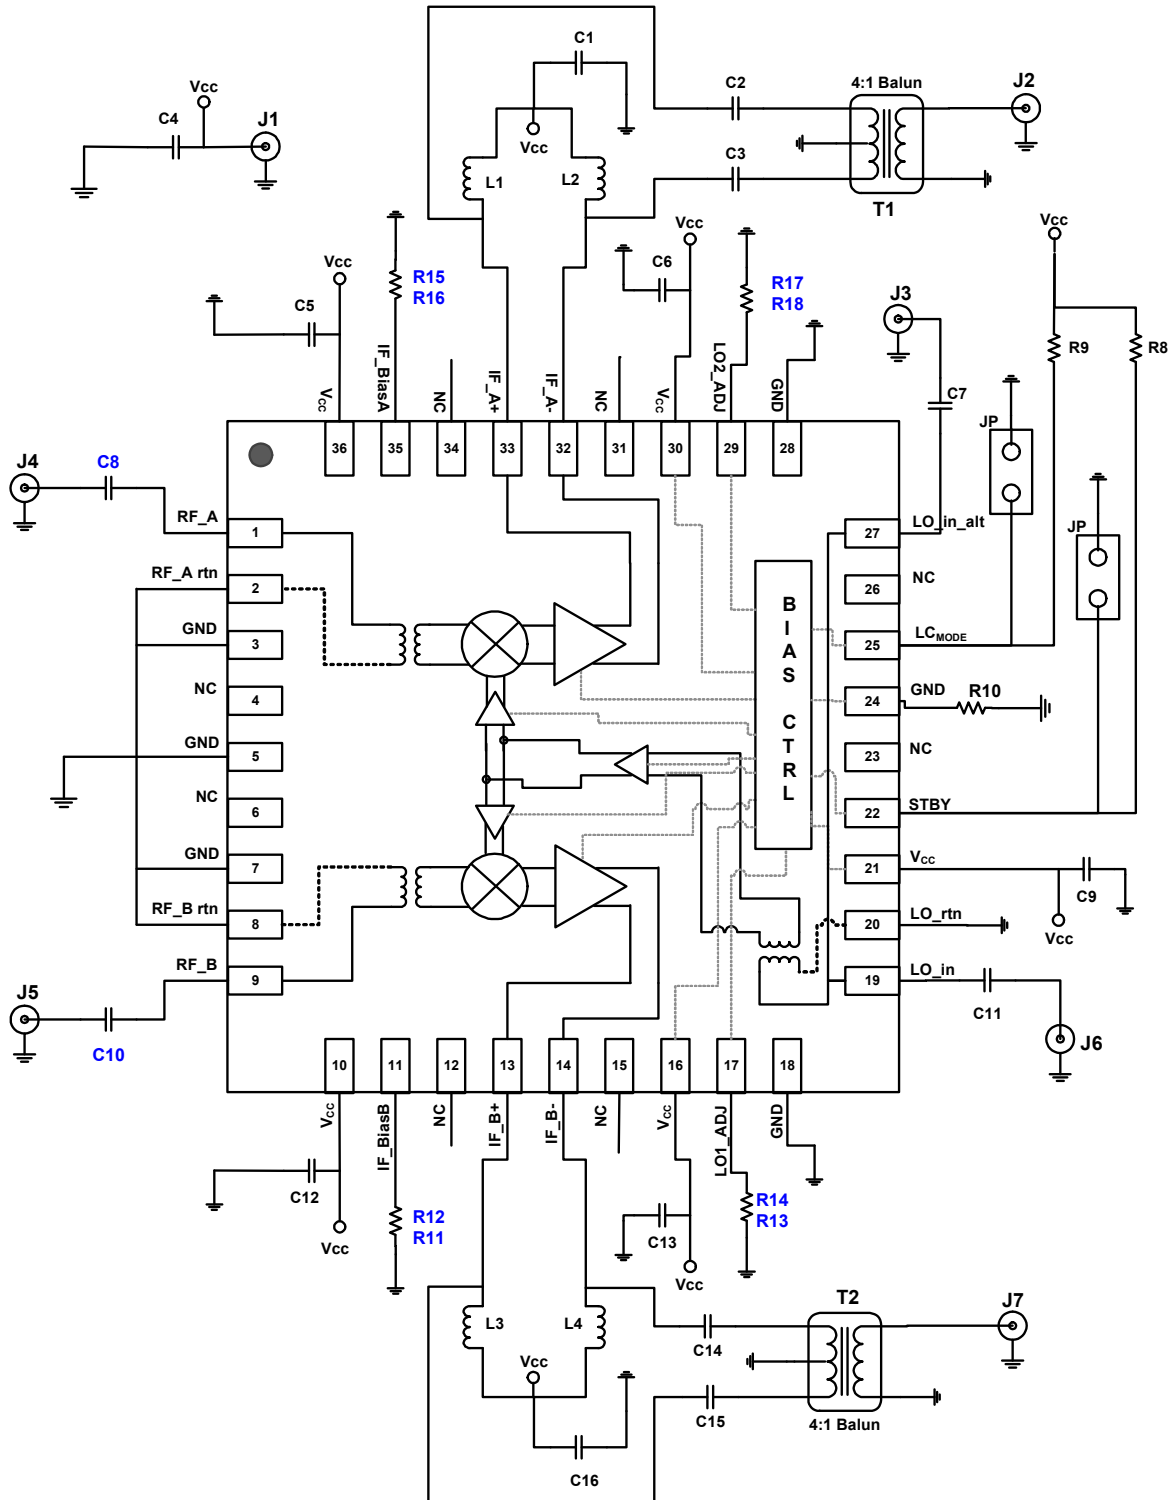

- Only connect to one LO feed
- Choose Either Pin 19 or Pin 27
- Do not connect the unused LO pin to ensure good LO return loss

**PIN DESCRIPTIONS**

Pin	Name	Function
1	RF_A	Main Channel RF Input. Internally matched to 50Ω. DO NOT apply DC to these pins
2, 8, 20	RF_Artn, RF_Brtn, LO_rtn	Transformer Ground Returns. Ground these pins.
3, 5, 7, 18, 24, 28	GND	Ground these pins.
4, 6, 12, 15, 31, 23, 26, 34	N.C.	No Connection. Not internally connected. OK to connect to Vcc. OK to connect to GND
10, 16, 21, 30, 36	VCC	Power Supply. Bypass to GND with capacitors shown in the Typical Application Circuit as close as possible to pin.
9	RF_B	Diversity Channel RF Input. Internally matched to 50Ω
11	IF_BiasB	Connect the specified resistor from this pin to ground to set the bias for the Diversity IF amplifier. This is NOT a current set resistor
13, 14	IFB+, IFB-	Diversity Mixer Differential IF Output. Connect pullup inductors from each of these pins to VCC (see the Typical Application Circuit).
17	LO1_ADJ	Connect the specified resistor for either Standard or LC mode from this pin to ground to set the LO common buffer Icc
19, 27	LO_in LO_in_alt	Local Oscillator Input. Connect the LO to this port through the recommended coupling capacitor. <b>Note that you can only drive one LO port at a time. Remove the series capacitor from the unused port.</b>
25	LC_MODE	Low_Current Mode. Set this pin to low or ground for LC mode. Set to high or No-Connect for Standard mode. There is an internal pull-up resistor.
22	STBY	STBY Mode. Pull this pin high for Standby mode (~20 mA). Pull low or Ground for normal Operation
29	LO2_ADJ	Connect the specified resistor for either Standard or LC mode from this pin to ground to set the LO drive buffers Icc
32, 33	IFA-, IFA+	Main Mixer Differential IF Output. Connect pullup inductors from each of these pins to VCC (see the Typical Application Circuit).
35	IF_BiasA	Connect the specified resistor from this pin to ground to set the bias for the Main IF amplifier. This is NOT a current set resistor
	— EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the noted RF performance.

EVKIT SCHEMATIC

**EVKIT PICTURE/LAYOUT/OPERATION**

**EVKIT BOM**
**Default BOM:**

For Standard Mode, Open the LC<sub>MODE</sub> jumper in conjunction with positioning the 4 dual jumpers to select the resistors in **red**.

For Low Current Mode close the LC<sub>MODE</sub> jumper in conjunction with positioning the 4 dual jumpers to select the resistors in **blue**.
