To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.

   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.

   "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

To all our customers

Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.) Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

M37735MHLXXXHP

SINGLE-CHIP 16-BIT CMOS MICROCOMPUTER

DESCRIPTION

The M37735MHLXXXHP is a single-chip microcomputer using the 7700 Family core. This single-chip microcomputer has a CPU and a bus interface unit. The CPU is a 16-bit parallel processor that can be an 8-bit parallel processor, and the bus interface unit enhances the memory access efficiency to execute instructions fast. This microcomputer also includes a 32 kHz oscillation circuit, in addition to the ROM, RAM, multiple-function timers, serial I/O, A-D converter, and so on.

Its strong points are the low power dissipation, the low supply voltage and the small package.

FEATURES

- Number of basic instructions 103
- Memory size ROM ..... 124 Kbytes
  RAM ..... 3968 bytes
- Instruction execution time
  The fastest instruction at 12 MHz frequency ..... 333 ns
- Single power supply ..... 2.7–5.5 V
- Low power dissipation (At 3 V supply voltage, 12 MHz frequency)
  ..... 9 mW (Typ.)
- Interrupts ..... 19 types, 7 levels
- Multiple-function 16-bit timer ..... 5 + 3
- Serial I/O (UART or clock synchronous) 3
- 10-bit A-D converter ..... 8-channel inputs
- 12-bit watchdog timer
- Programmable input/output
  (ports P0, P1, P2, P3, P4, P5, P6, P7, P8) 68
- Clock generating circuit ..... 2 circuits built-in
- Small package ..... 80-pin plastic molded fine-pitch QFP
  (80P6D-A;0.5 mm lead pitch)

APPLICATION

Control devices for general commercial equipment such as office automation, office equipment, personal information equipment, and so on.

Control devices for general industrial equipment such as communication equipment, and so on.

FUNCTIONS OF M37735MHLXXXHP

Parameter		Functions
Number of basic instructions		103
Instruction execution time		333 ns (the fastest instruction at external clock 12 MHz frequency)
Memory size	ROM	124 Kbytes
	RAM	3968 bytes
Input/Output ports	P0 – P2, P4 – P8	8-bit × 8
	P3	4-bit × 1
Multi-function timers	TA0, TA1, TA2, TA3, TA4	16-bit × 5
	TB0, TB1, TB2	16-bit × 3
Serial I/O		(UART or clock synchronous serial I/O) × 3
A-D converter		10-bit × 1 (8 channels)
Watchdog timer		12-bit × 1
Interrupts		3 external types, 16 internal types Each interrupt can be set to the priority level (0 – 7.)
Clock generating circuit		2 circuits built-in (externally connected to a ceramic resonator or a quartz-crystal oscillator)
Supply voltage		2.7 – 5.5 V
Power dissipation		9 mW (at 3 V supply voltage, external clock 12 MHz frequency)
		22.5 mW (at 5 V supply voltage, external clock 12 MHz frequency)
Input/Output characteristic	Input/Output voltage	5 V
	Output current	5 mA
Memory expansion		Maximum 1 Mbytes
Operating temperature range		–40 to 85 °C
Device structure		CMOS high-performance silicon gate process
Package		80-pin plastic molded fine-pitch QFP (80P6D-A;0.5 mm lead pitch)

PIN DESCRIPTION

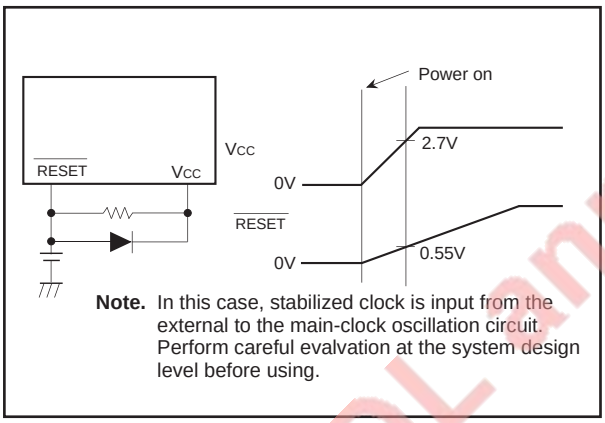
Pin	Name	Input/Output	Functions
Vcc, Vss	Power source		Apply 2.7 – 5.5 V to Vcc and 0 V to Vss.
CNVss	CNVss input	Input	This pin controls the processor mode. Connect to Vss for the single-chip mode and the memory expansion mode, and to Vcc for the microprocessor mode.
$\overline{RESET}$	Reset input	Input	When "L" level is applied to this pin, the microcomputer enters the reset state.
X_{IN}	Clock input	Input	These are pins of main-clock generating circuit. Connect a ceramic resonator or a quartz-crystal oscillator between X_{IN} and X_{OUT}. When an external clock is used, the clock source should be connected to the X_{IN} pin, and the X_{OUT} pin should be left open.
X_{OUT}	Clock output	Output	
$\overline{E}$	Enable output	Output	In the single-chip mode, this pin functions as the enable signal output pin which indicates the access status in the internal bus. In the memory expansion mode or the microprocessor mode, this pin functions as the $\overline{RDE}$ signal output pin.
BYTE	External data bus width selection input	Input	In the memory expansion mode or the microprocessor mode, this pin determines whether the external data bus has an 8-bit width or a 16-bit width. The data bus has a 16-bit width when "L" signal is input and an 8-bit width when "H" signal is input.
AVcc, AVss	Analog power source input		Power source input pin for the A-D converter. Externally connect AVcc to Vcc and AVss to Vss.
V_{REF}	Reference voltage input	Input	This is reference voltage input pin for the A-D converter.
$P0_0$ – $P0_7$	I/O port P0	I/O	In the single-chip mode, port P0 becomes an 8-bit I/O port. An I/O direction register is available so that each pin can be programmed for input or output. These ports are in the input mode when reset. In the memory expansion mode or the microprocessor mode, these pins output $\overline{CS_0}$ – $\overline{CS_4}$, $\overline{RSMP}$ signals, and address (A_{16}, A_{17}).
$P1_0$ – $P1_7$	I/O port P1	I/O	In the single-chip mode, these pins have the same functions as port P0. When the BYTE pin is set to "L" in the memory expansion mode or the microprocessor mode and external data bus has a 16-bit width, high-order data (D_8 – D_{15}) is input/output or an address (A_8 – A_{15}) is output. When the BYTE pin is "H" and an external data bus has an 8-bit width, only address (A_8 – A_{15}) is output.
$P2_0$ – $P2_7$	I/O port P2	I/O	In the single-chip mode, these pins have the same functions as port P0. In the memory expansion mode or the microprocessor mode, low-order data (D_0 – D_7) is input/output or an address (A_0 – A_7) is output.
$P3_0$ – $P3_3$	I/O port P3	I/O	In the single-chip mode, these pins have the same function as port P0. In the memory expansion mode or the microprocessor mode, $\overline{WEL}$, $\overline{WEH}$, ALE, and $\overline{HLDA}$ signals are output.
$P4_0$ – $P4_7$	I/O port P4	I/O	In the single-chip mode, these pins have the same functions as port P0. In the memory expansion mode or the microprocessor mode, $P4_0$, $P4_1$, and $P4_2$ become $\overline{HOLD}$ and $\overline{RDY}$ input pins, and clock ϕ_1 output pin, respectively. Functions of the other pins are the same as in the single-chip mode. However, in the memory expansion mode, $P4_2$ also functions as an I/O port.
$P5_0$ – $P5_7$	I/O port P5	I/O	In addition to having the same functions as port P0 in the single-chip mode, these pins also function as I/O pins for timers A0 to A3 and input pins for key input interrupt input ($\overline{KI_0}$ – $\overline{KI_3}$).
$P6_0$ – $P6_7$	I/O port P6	I/O	In addition to having the same functions as port P0 in the single-chip mode, these pins also function as I/O pins for timer A4, input pins for external interrupt input ($\overline{INT_0}$ – $\overline{INT_2}$) and input pins for timers B0 to B2. $P6_7$ also functions as sub-clock ϕ_{SUB} output pin.
$P7_0$ – $P7_7$	I/O port P7	I/O	In addition to having the same functions as port P0 in the single-chip mode, these pins function as input pins for A-D converter. $P7_2$ to $P7_5$ also function as I/O pins for UART2. Additionally, $P7_6$ and $P7_7$ have the function as the output pin (X_{COUT}) and the input pin (X_{CIN}) of the sub-clock (32 kHz) oscillation circuit, respectively. When $P7_6$ and $P7_7$ are used as the X_{COUT} and X_{CIN} pins, connect a resonator or an oscillator between the both.
$P8_0$ – $P8_7$	I/O port P8	I/O	In addition to having the same functions as port P0 in the single-chip mode, these pins also function as I/O pins for UART 0 and UART 1.

BASIC FUNCTION BLOCKS

The M37735MHLXXXHP has the same functions as the M37735MHBXXXFP except for the package and the reset circuit. Refer to the section on the M37735MHBXXXFP.

RESET CIRCUIT

The microcomputer is released from the reset state when the $\overline{\text{RESET}}$ pin is returned to "H" level after holding it at "L" level with the power source voltage at 2.7 – 5.5 V. Program execution starts at the address formed by setting address A_{23} – A_{16} to 00_{16}, A_{15} – A_8 to the contents of address $FFFF_{16}$, and A_7 – A_0 to the contents of address $FFFE_{16}$.
Figure 1 shows an example of a reset circuit. When the stabilized clock is input from the external to the main-clock oscillation circuit, the reset input voltage must be 0.55 V or less when the power source voltage reaches 2.7 V. When a resonator/oscillator is connected to the main-clock oscillation circuit, change the reset input voltage from "L" to "H" after the main-clock oscillation is fully stabilized.
The status of the internal registers during reset is the same as the M37735MHBXXXFP's.



Note. In this case, stabilized clock is input from the external to the main-clock oscillation circuit. Perform careful evalvation at the system design level before using.

ADDRESSING MODES

The M37735MHLXXXHP has 28 powerful addressing modes. Refer to the "7700 Family Software Manual" for the details.

MACHINE INSTRUCTION LIST

The M37735MHLXXXHP has 103 machine instructions. Refer to the "7700 Family Software Manual" for the details.

ELECTRICAL CHARACTERISTICS (V_{CC} = 5 V, V_{SS} = 0 V, Ta = –40 to +85 °C, unless otherwise noted)

Symbol	Parameter	Test conditions		Limits			Unit
				Min.	Typ.	Max.	
I_{CC}	Power source current	When single-chip mode, output pins are open, and other pins are V_{SS}.	V_{CC} = 5 V, $f(X_{IN})$ = 12 MHz (square waveform), ($f(f_2)$ = 6 MHz), $f(X_{CIN})$ = 32.768 kHz, in operating (Note 1)		4.5	9	mA
			V_{CC} = 3 V, $f(X_{IN})$ = 12 MHz (square waveform), ($f(f_2)$ = 6 MHz), $f(X_{CIN})$ = 32.768 kHz, in operating (Note 1)		3	6	mA
			V_{CC} = 3 V, $f(X_{IN})$ = 12 MHz (square waveform), ($f(f_2)$ = 0.75 MHz), $f(X_{CIN})$: Stopped, in operating		0.4	0.8	mA
			V_{CC} = 3 V, $f(X_{IN})$ = 12 MHz (square waveform), $f(X_{CIN})$ = 32.768 kHz, when a WIT instruction is executed (Note 2)		6	12	µA
			V_{CC} = 3 V, $f(X_{IN})$: Stopped, $f(X_{CIN})$ = 32.768 kHz, in operating (Note 3)		30	60	µA
			V_{CC} = 3 V, $f(X_{IN})$: Stopped, $f(X_{CIN})$ = 32.768 kHz, when a WIT instruction is executed (Note 4)		3	6	µA
			Ta = 25 °C, when clock is stopped			1	µA
			Ta = 85 °C, when clock is stopped			20	µA

Notes 1. This applies when the main clock external input selection bit = “1”, the main clock division selection bit = “0”, and the signal output stop bit = “1”.
2. This applies when the main clock external input selection bit = “1” and the system clock stop bit at wait state = “1”.
3. This applies when CPU and the clock timer are operating with the sub clock (32.768 kHz) selected as the system clock.
4. This applies when the X_{COUT} drivability selection bit = “0” and the system clock stop bit at wait state = “1”.

A–D CONVERTER CHARACTERISTICS

(V_{CC} = AV_{CC} = 5 V, V_{SS} = AV_{SS} = 0 V, Ta = –40 to +85 °C, $f(X_{IN})$ = 12 MHz, unless otherwise noted (Note))

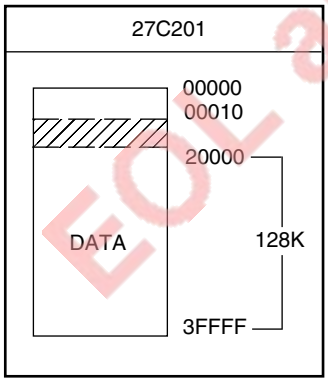
※1. Confirmation

Specify the name of the product being ordered.
Three sets of EPROMs are required for each pattern (Check @ in the appropriate box).
If at least two of the three sets of EPROMs submitted contain the identical data, we will produce masks based on this data.
We shall assume the responsibility for errors only if the mask ROM data on the products we produce differ from this data.
Thus, the customer must be especially careful in verifying the data contained in the EPROMs submitted.

Checksum code for entire EPROM areas [ ][ ][ ][ ] (hexadecimal notation)

EPROM Type :



(1) Set "FF16" in the shaded area.
(2) Address 016 to 1016 are the area for storing the data on model designation and options.This area must be written with the data shown below.
Details for option data are given next in the section describing the STP instruction option.
Address and data are written in hexadecimal notation.

Address		Address		Address
4D	0	4C	8	Option data 10
33	1	FF	9	
37	2	FF	A	
37	3	FF	B

48	7	FF	F	

※2. STP instruction option

One of the following sets of data should be written to the option data address (1016) of the EPROM you have ordered.
Check @ in the appropriate box.

☐ STP instruction enable 0116 Address 1016
☐ STP instruction disable 0016 Address 1016

※3. Mark specification

Mark specification must be submitted using the correct form for the type of package being ordered fill out the appropriate 80P6D Mark Specification Form (for M37735MHLXXXHP) and attach to the Mask ROM Order Confirmation Form.
