Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics.

The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

- “Standard”:
- Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
- “High Quality”:
- Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
- “Specific”:
- Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.

8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.

 13. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

- Notes**
1. "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.
 2. "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

Regional Information

Some information contained in this document may vary from country to country. Before using any Renesas Electronics product in your application, please contact the Renesas Electronics office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

Notes for CMOS Devices

(1) Precaution against ESD for semiconductors

Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

(2) Handling of unused input pins for CMOS

No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to VDD or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

(3) Status before initialization of MOS devices

Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

Chapter 1 Overview

1.1 Naming

1.1.1 Alternative function pins

Peripheral	Prefix	Function name	Suffix
Short-cut of macro name	Consecutive number for same peripheral module ^a	Peripheral Macro pin naming	Consecutive number for same pin names ^a

^{a)} This is an option that can be omitted if meaning is obvious

Example:

- CSIG0SO, CSIG0SI, CSIG0SC, CSIG0RYI, CSIG0RYO

1.1.2 Power supply pins

Function	Prefix	Kind of supply	Suffix
Symbol	Consecutive number for different functions ^a	VDD or VSS	Consecutive number for different pins with same meaning ^a

^{a)} This is an option that can be omitted if meaning is obvious

Example:

- E0VDDn, REG0VSS

Table 1-1 Selection for Functions

Function	Explanation
REG	Internal regulator supply
OSC	Oscillator supply
I0	Flash module supply and ISO0 Internal regulator supply (mainly 5V)
E	Standard buffer supply (mainly 5V or up to 20Mhz)
A	Analog module supply (e.g. ADC)

If not mentioned otherwise this document neglects suffixes for power supply pins with same functions that can be treated as equal.

1.2 Pin Groups

Symbol	Pin group supplied by	Related pins / ports
PgE0	E0VDD / E0VSS	JP0, P0, _RESET, FLMD0,
PgE1	E1VDD / E1VSS	P1, P3, P4
PgOSC	OSCVDD / OSCVSS	X1, X2
PgA0	A0VREFP / A0VSS	P10

1.3 General measurement conditions

1.3.1 AC characteristic measurement condition

AC test input waveform

AC test output waveform

Standard AC test condition is 70%/30% of the applied IO supply voltage (X_mVDD) if not otherwise stated in the according AC timing specification of an interface.

AC Test Condition: Ext. Capacitive Load

Chapter 2 Absolute maximum ratings

2.1 Supply voltages

Table 2-1 VDD Data

Parameter	Symbol	Condition	Ratings	Unit
System	CVDD		-0.3 ~ 1.6	V
	I0VDD		-0.3 ~ 6.0	V
	OSCVDD		-0.3 ~ 6.0	V
	REG0VDD		-0.3 ~ 6.0	V
	REG1VDD		-0.3 ~ 6.0	V
	REG2VDD		-	V
	REG3VDD		-	V
Ports	E0VDD		-0.3 ~ 6.0	V
	E1VDD		-0.3 ~ 6.0	V
ADCA0	A0VREFP		-0.3 ~ 6.0	V

2.2 Port voltages

Table 2-2 Port Input voltage

Parameter	Pin Group ^a	Symbol	Condition	Ratings	Unit
Input voltage ^b	PgE0	V _I	E0VDD ≤ 5.5	-0.3 ~ E0VDD+0.3	V
	PgE1		E1VDD ≤ 5.5	-0.3 ~ E1VDD+0.3	V
	PgOSC		OSCVDD ≤ 5.5	-0.3 ~ OSCVDD+0.3	V
	PgA0			-0.3 ~ A0VREFP+0.3	V

a) The pin groups reflect all supplies within the device series. Therefore not every pin group is available for each product.

b) The characteristics of the alternative-function pins are the same as those of the port pins unless otherwise specified.

2.3 Port current

Table 2-3 High level port output current

Parameter	Pin Group ^a	Symbol	Condition	Max. spec	Unit
High level output current	PgE0/PgE1	I_{OH}	1 pin of PgE0/PgE1	-10	mA
			Power supply of PgE0 and PgE1	-60	mA
	PgA0		1 pin of PgA0	-10	mA
			Power supply of PgA0	-25	mA

a) The column reflects all supplies within the device series. Therefore not each pin group is available for each product.

Table 2-4 Low level port output current

Parameter	Pin Group ^a	Symbol	Condition	Max. spec	Unit
Low level output current	PgE0/PgE1	I_{OL}	1 pin of PgE0/PgE1	10	mA
			Power supply of PgE0 and PgE1	60	mA
	PgA0		1 pin of PgA0	10	mA
			Power supply of PgA0	25	mA

a) The column reflects all supplies within the device series. Therefore not each pin group is available for each product.

2.4 Capacitance

Parameter	Symbol	Condition	Max. spec	Unit
Input capacitance	C_I	f = 1 MHz 0V for non measurement pins	15	pF
Input/Output capacitance	C_{IO}		15	pF
Output capacitance	C_O		15	pF

2.5 Thermal characteristics

Table 2-5 Thermal characteristics

Parameter	Symbol	Condition	Ratings	Unit
Storage temperature	T_{STG}		-55 ~125	°C
Operating ambient temperature	T_a	(A) grade products	-40 ~85	
		(A1) grade products	-40 ~110	
		(A2) grade products	-40 ~125	

This section specifies the absolute maximum limitation of operating and storage temperature.

The device's functions are not guaranteed outside of the specified maximum temperature ratings.

Chapter 3 Power supply specification

3.1 Requirements for external power supply connections

The user has to ensure a low resistive connection of all VSS pins on the PCB. This specification denotes ground supply pins as:

- VSS = OSCVSS = REGnVSS = EnVSS = A0VSS = 0V

in the further text.

With

- EnVSS = E0VSS = E1VSS
- REGnVSS = REG0VSS = REG1VSS

The user has to ensure a low resistive connection of all VDD pins to the related power supply. This specification denotes power supply pins as:

- EnVDD, I/OVDD, REGnVDD, OSCVDD, A0VREFP.

in the further text.

With

- EnVDD = E0VDD = E1VDD
- REGnVDD = REG0VDD = REG1VDD.
- I/OVDD = A0VREFP, EnVDD, IOVDD, OSCVDD

3.2 Power area definitions

The device consists of the following power areas:

- AWO (Always On area)
- ISO0 (Isolated area 0)

The table below lists the related core and port voltage supply of each power area:

Table 3-1 Power areas supply voltages

Power Area	Supply voltage	Related pins
AWO	Internal regulator supply	REG0VDD, REG0VSS
	Port Supply	E0VDD, E0VSS
	Other	OSCVDD, OSCVSS IOVDD
ISO0	Internal regulator supply	REG1VDD, REG1VSS
	Port Supply	E1VDD, E1VSS
	Other	A0VREFP, A0VSS

3.3 Power supply groups

For each of the following power supply groups the same voltage must be supplied:

Table 3-2 Power supply groups

Power supply group	Related pins
#1	REG0VDD, REG1VDD, IOVDD, OSCVDD, E0VDD, E1VDD
#3	-
#5	A0VREFP
#7	All VSS

a) Some peripherals can be operated at 64MHz. Refer to the chapter ‘Clock Selection’ in the UM for details.

4.3 Oscillator characteristics

4.3.1 Main oscillator

A ceramic or crystal resonator can be connected to the main clock input pins as shown in figure 4-1 "Recommended Main Oscillator Circuit"

Figure 4-1 Recommended Main Oscillator Circuit

Caution Values of C_1 , C_2 and R_d depend on the used ceramic or crystal resonator and must be specified in cooperation with ceramic or crystal resonator manufacturer.

Parameter	Symbol	Condition	Ratings	Unit
MainOSC frequency	fMOSC	Maximum variation $\pm 0.5\%$	4, 5, 6, 8, 10, 12, 16, 20	MHz

- Cautions**
- External clock input is prohibited.
 - General guidance for PCB layout:
 - Keep the wiring length as short as possible.
 - Do not cross the wiring with other signal lines.
 - Do not route this circuit close to a signal line with high fluctuating current flow.
 - Always make the ground point of the oscillator capacitor the same potential as REG0VSS and OSCVSS.
 - Do not ground the capacitor to a ground pattern with high current flow.
 - Do not tap signals from the oscillator.

4.3.2 Internal oscillator

5.1 Port Characteristics

5.1.1 Condition settings

Some of the conditions mentioned in this chapter can be selected by software. The related register settings are described below:

(1) Input characteristic

The input characteristics can be selected by the registers PIS and PISE with the following coding:

a) The AWO is always ON.

b) The 240kHz IntOSC is always ON.

- Notes**
1. The above currents do not include port buffer currents.
 2. The currents in run mode include currents for self-programming.
 3. The 'typical' specification is for reference only and not a guaranteed value. The 'typical' specification is applicable under the following conditions:
 - Ta = 25°C
 - REGnVDD=I0VDD=OSCVDD=EmVDD=A0VREFP=5.0V

Revision History

Version	Date	Document number	Major changes
1.0	2012-08-30	R01DS0146ED0100	Initial release (previous document was EASE-DS-0034-1.2) - Changed pin terminal arrangement of P4_1, P4_3, P4_4 and P4_5
1.01	2013-09-10	R01DS0146ED0101	Chapter 3: - CPU Start-up time Tcpu was 750µs typ. - VPOC was 2.80V min. Chapter 7: - VLVI Detection Voltage VRAMHF was 1.80V min. - Added DPIN characteristics
1.02	2014-04-21	R01DS0146EJ0102	Throughout: - Changed pin name A0VDD/AnVDD to A0VREFP Chapter 3: - Deleted timing charts of ISO Regulator characteristics Chapter 5: - Deleted CMOS1 descriptions from VIH and VIL of PgE1. - Deleted Analog noise filter section. Chapter 6: - Deleted supply current specifications of µPD70F3573 and µPD70F3574 Chapter 7: - Added timing chart to reset timing - Corrected pin name and symbols in timing chart of NMI timing Chapter 8: - Added caution to code flash specification
