■ E2 emulator Debugging Function

Target MCU			Break Function			Trace Function		Memory reference address while execution resumes	Performance measurement	Trigger	Hot plug-in
Family	Series/Core	Group	Connection system	Hardware Break	Software Break	Special Break	Internal trace				
RA	RA8	RA8D1/M1	JTAG	8 points for an execution address, 8 points for a data access	2048 points for ROM/RAM area		Obtained information of branches is stored in a dedicated buffer (RB8) (both branch-source and branch-destination info)	Not supported, the time b/w Go and Stop is measurable.	Not supported		
	RA6	RA6E2	SWD	6 points for an execution address, 4 points for a data access			Obtained information of branches is stored in a dedicated buffer (RB6) (both branch-source and branch-destination info)				
		Others than RA6xx	JTAG or SWD				Obtained information of branches is stored in a dedicated buffer (ZB6) (both branch-source and branch-destination info)				
	RA4	RA4M1/RA4W1	JTAG or SWD	4 points for an execution address, 2 points for a data access			Obtains the information of up to 2K branches #5 (both branch-source and branch-destination info)				
	RA2	RA2xx	SWD	4 points for an execution address, 2 points for a data access			Obtains the information of up to 4K branches #5 (both branch-source and branch-destination info)				
RE	RE0	RE01	SWD	4 points for an execution address, 2 points for a data access	Obtains the information of up to 4K branches #5 (both branch-source and branch-destination info)						
RH850	RH850 F1x	RH850 F1H RH850 F1L RH850 F1K RH850 F1KM RH850 F1KH	LPD4-pin or LPD1-pin	12 points being shared by an execution address and data access	2000 points for ROM/RAM area		Obtains the information of up to 2K branches #5 (both branch-source and branch-destination info)	supported		Supported	
	RH850 E1x	RH850 E1M-E2	LPD4-pin				Between 2K and 4K of branch information can be acquired when this is the only target				
	RH850 C1x	RH850 C1H RH850 C1M	LPD4-pin				Between 1K and 2K of cycle information on data-access operation can be acquired when this is the only target				
	RH850 D1x	RH850 D1H RH850 D1M	LPD4-pin or LPD1-pin				Trace function isn't supported in some MCU's.				
	RH850 P1x	RH850 P1M-E RH850 P1M-C	LPD4-pin								
	RH850 E2x	RH850 E2M RH850 E2H RH850 E2JH	LPD4-pin or JTAG				Between 4K and 8K of branch information can be acquired when this is the only target				
	RH850 U2x	RH850 U2A RH850 U2B	LPD4-pin or JTAG				Between 2K and 4K of cycle information on data-access operation can be acquired when this is the only target				
	RH850 U2x	RH850 U2A RH850 U2B	LPD4-pin or JTAG				Trace function isn't supported in some MCU's.				
RL78	RL78/G2x	RL78/G22 RL78/G23 RL78/G24	Single-wire Serial	2 points being shared by an execution address and data access	2000 points		Obtains the information of up to 256 branches (only branch-source info)	Supported	Not supported, the time b/w Go and Stop is measurable.	Not supported	
	RL78/D1x	RL78/D1A		1 point being shared by an execution address and data access			Not supported				
	RL78/F1x	RL78/F12 RL78/F13 RL78/F14 RL78/F15 RL78/F16		2 points being shared by an execution address and data access			Obtains the information of up to 128 branches (only branch-source info); the obtainable info is limited to 64 branches on some MCU's.				
	RL78/F2x	RL78/F22 RL78/F24		2 points for an execution address			Not supported				
	RL78/G1x	RL78/G10 RL78/G1M RL78/G1H RL78/G1A RL78/G14 (ROM 96KB (byte and word)) RL78/G1F RL78/G1H RL78/G1T RL78/G12 RL78/G14 (ROM 64KB (byte and word)) RL78/G15 RL78/G16 RL78/G1A RL78/G1C RL78/G1D RL78/G1E RL78/G1G RL78/G13A		1 point being shared by an execution address and data access			Obtains the information of up to 256 branches (only branch-source info)				
	RL78/I1x	RL78/I1A RL78/I1C RL78/I1D RL78/I1E		2 points being shared by an execution address and data access			Obtains the information of up to 256 branches (only branch-source info)				
	RL78/L1x	RL78/L12 RL78/L13 RL78/L1A RL78/L1D		1 point being shared by an execution address and data access			Not supported				
	RL78/H1x	RL78/H1D		2 points being shared by an execution address and data access			Obtains the information of up to 256 branches (only branch-source info)				
	RL78/FGIC			1 point being shared by an execution address and data access			Not supported				
	RL78/G2x	RL78/G22 RL78/G23 RL78/G24		2 points being shared by an execution address and data access			Obtains the information of up to 256 branches (only branch-source info)				
	RL78/D1x	RL78/D1A		1 point being shared by an execution address and data access			Not supported				
	RL78/F1x	RL78/F12 RL78/F13 RL78/F14 RL78/F15 RL78/F16		2 points being shared by an execution address and data access			Obtains the information of up to 128 branches (only branch-source info); the obtainable info is limited to 64 branches on some MCU's.				
	RL78/F2x	RL78/F22 RL78/F24		2 points for an execution address			Not supported				
	RL78/G1x	RL78/G10 RL78/G1M RL78/G1H RL78/G1A RL78/G14 (ROM 96KB (byte and word)) RL78/G1F RL78/G1H RL78/G1T RL78/G12 RL78/G14 (ROM 64KB (byte and word)) RL78/G15 RL78/G16 RL78/G1A RL78/G1C RL78/G1D RL78/G1E RL78/G1G RL78/G13A		1 point being shared by an execution address and data access			Obtains the information of up to 256 branches (only branch-source info)				
	RL78/I1x	RL78/I1A RL78/I1C RL78/I1D RL78/I1E		2 points being shared by an execution address and data access			Obtains the information of up to 256 branches (only branch-source info)				
RL78/L1x	RL78/L12 RL78/L13 RL78/L1A RL78/L1D	1 point being shared by an execution address and data access	Not supported								
RL78/H1x	RL78/H1D	2 points being shared by an execution address and data access	Obtains the information of up to 256 branches (only branch-source info)								
RL78/FGIC		1 point being shared by an execution address and data access	Not supported								
RX	RX700	RX72x RX71x	JTAG or Single-wire Serial	8 points for an execution address or 4 points for a data access (DMAC or DTC bus is selectable as a bus master) * Sequential breaks are specifiable.	256 points at the max.		Obtains the information of up to 256 branches or the information of up to 256 cycles on data-access operation (DMAC or DTC bus is selectable as a bus master)	Supported #4		Supported #2	
	RX800	RX84x RX85x RX86x RX87x RX88x	JTAG or Single-wire Serial	8 points for an execution address or 4 points for a data access * Sequential breaks are specifiable.			Obtains the information of up to 256 branches or the information of up to 256 cycles on data-access operation (DMAC or DTC bus is selectable as a bus master)				
		Others than RX8xx	JTAG or double-wire Serial *2 (look and data)	8 points for an execution address or 4 points for a data access * Sequential breaks are specifiable.			Obtains the information of up to 256 branches or the information of up to 256 cycles on data-access operation				
	RX300	RX300 RX140 Other than RX28T	Single-wire Serial	4 points for an execution address or 2 points for a data access * Sequential breaks are specifiable.			Obtains the information of up to 64 branches or the information of up to 32 cycles on data-access operation #1				
R-Car	R-Car S4	-	GMMD-LPD-4pin JTAG Cortex-A/R JTAG	12 points for an execution address/a data access Cortex-A/R 6 pits for an execution address Cortex-A/R 6 pits for an execution address Cortex-A/R 2 pits for a data access	2048 points for ROM/RAM area		Between 2K and 8K of branch information can be acquired when this is the only target	Cortex-A/R Supported Cortex-A/R Not supported, the time b/w Go and Stop is measurable.	Not supported	Supported	
	R-Car V4H	-	JTAG	Cortex-A/R 6 pits for an execution address Cortex-A/R 6 pits for an execution address Cortex-A/R 2 pits for a data access			Obtained information of branches is stored in a dedicated buffer (ZB8) (both branch-source and branch-destination info)				
RISC-V MCU	RAA20Q021	RAA20Q021	JTAG	4 points being shared by an execution address and data access	2000 points for ROM/RAM area		Not supported	Not supported, the time b/w Go and Stop is measurable.	Not supported	Not supported	

Notes:  
 #1 For RX220 group, the information of 32 branches or the information of 32 cycles on data-access operation is obtained.  
 #2 The debugging function and the connection system vary by the MCU you use.  
 #3 Available only when the emulator is connected via JTAG interface.  
 #4 1 section can be saved with RX100, 2 sections can be saved with RX800.\*  
 #5 The internal RAM of the microcomputer is used as the trace buffer.  
 \* The information provided only applies to MCUs where we have been able to confirm the specifications of the emulator.  
 This includes MCUs and emulator software that are under development. For more information on support for these items as it becomes available, check our website at: https://www.renesas.com/rd

■ E2 emulator Lite Debugging Function

Target MCU			Connection system	Break Function			Trace Function	Memory reference & change while executing program	Performance measurement	Hot plug-in	
Family	Series/Core	Group		Hardware Break	Software Break	Special Break					Internal trace

78K0S			Not supported	2000 points	Supported (Not supported while interrupts are inhibited)	Not supported	Not supported	Measurement resolution: 100 μs Max. measurement time: Approx. 100 hours

Notes:  
 \*1. The following MCUs have not been supported yet: V850ES/KE2, V850ES/KF2, V850ES/KG2, μPD70F3733, and V850ES/IE2.  
 \*2. A forcible break is not possible in the following states.  
 - Interrupts are inhibited (DI).  
 - Interrupts from the serial interface used for communications between MINICUBE2 and the target device are masked.  
 - The device is on standby and triggering of release from standby by makeable interrupts is disabled.  
 - The main clock is stopped while the UART is being used as the communications interface between MINICUBE2 and the target device.

\* The information provided only applies to MCUs where we have been able to confirm the specifications of the emulator.  
 This includes MCUs and emulator software that are under development. For more information on support for these items as it becomes available, check our website at:
