

RA Ecosystem Partner Solution

Networking Products

Full suite TCP/IP IPv4/IPv6 solutions

Solution Summary

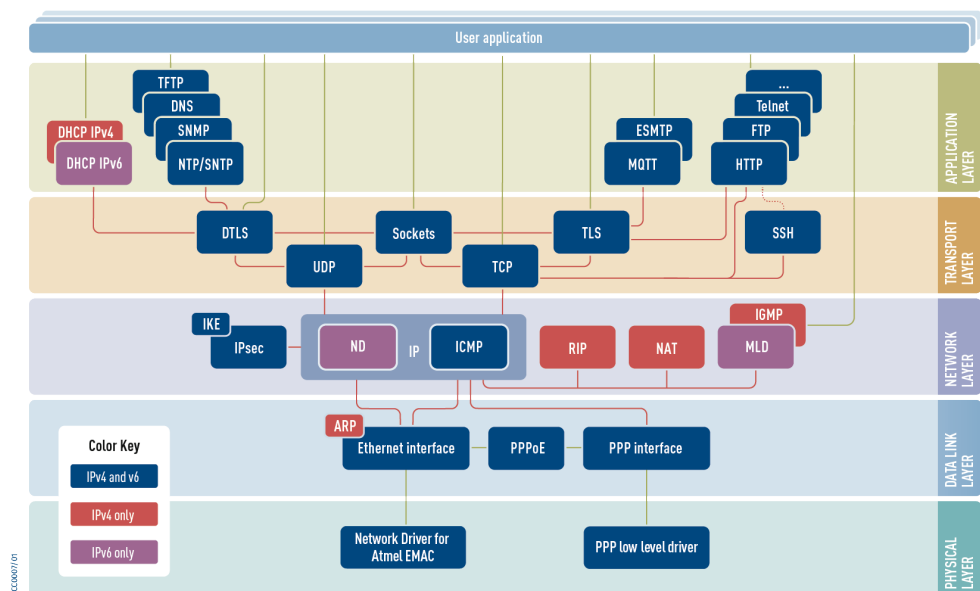

HCC's MISRA-compliant TCP/IP is a highly efficient embedded stack, developed using a verifiable process and conforming strongly to MISRA coding standards. It gives high performance with documented quality levels, making embedded IoT applications more reliable. Every stack is provided with a test suite to verify correct operation on the target system.

The stack supports IPv4 and IPv6. Protocols include MQTT, SNMP & all other common protocols. Software is provided with optimized Ethernet drivers & integrates with any RTOS. Security can be provided by IPSec/IKEv2, TLS 1.3 & HCC's encryption suite CryptoCore. Support is available for [RA MCUs](#).

Features/Benefits

- MISRA-compliant, supports IPv4 and IPv6
- Optimized Ethernet drivers provided
- Integrates easily with any RTOS
- Security can be provided by IPSec/IKEv2 and TLS/DTLS
- RAM requirements typically as low as 12kB, small ROM footprint
- Supports multiple network interfaces
- DHCP, DNS, NTP, SNMP
- FTP, HTTP(S), MQTT, SMTP, TFTP
- IPSEC/IKE, TLS/DTLS, EAP, SSH, NAT, MACsec
- Server and client side support
- Renesas Ethernet controllers

Block Diagram

Target Applications

- IoT devices
- Security equipment
- Industrial equipment
- FA machine
- Wearable devices
- Home appliances
- Medical equipment
- Automotive equipment
- Office equipment

About HCC

HCC Embedded develops deeply embedded software components “out of context”, which ensures that they can be used as core elements of any system, including those engineered to meet stringent requirements for safety, quality and portability. Built on a foundation of quality, HCC has a product portfolio of more than 250 embedded components, with deep competencies in reliable flash management, fail-safe file systems and IPv4/6 networking stacks with associated security protocols, as well as a comprehensive suite of USB host and function software.

HCC has developed a wide range of reusable software components for use in deeply embedded systems. HCC Embedded products are used, without modification, in thousands of customer projects with over 30 different RTOSes, in 8, 16, 32 and 64-bit systems, big- or little-endian, including many Renesas architectures/microcontrollers and tool chains.

HCC provides product support for the entire range of Renesas RA microcontroller variants and evaluation kits.

Safety Elements (out of Context)

ISO 26262-10 defines a SEooC as a method for using components in a vehicle where the components were not originally designed for that specific project. This methodology can be applied to both hardware and software elements. HCC is setting a new level for development by using the SEooC approach to build software Safety Elements.

HCC creates each SEooC with a full V-Model process following ISO 26262-6, which can be mapped to other safety processes such as ISO 61508, IEC 62304, and DO-178C. Each SEooC is supported by full software lifecycle processes, such that they can be integrated with the OEM’s safety development process. The development process includes full traceability between DOORS-based requirements and test cases, as well as traceability between the requirements, design, and implementation.

SafeTCPIP, developed to ASIL/B, is HCC’s first SEooC product.

For the complete embedded development lifecycle

HCC’s embedded engineering team has expertise in many areas of deeply embedded systems development. With indepth knowledge in file systems, flash management, networking and communications protocols, HCC’s development services team has built over 2,000 customer projects for a wide range of target environments across all industries.

Our 20 years of developing embedded software to high standards, independent of particular RTOS or tool-chain architecture, enable our engineering team to add focus and quality to specific challenges during product development.
