- Fast Dynamic response

- **Advanced internal loop compensation**

- **Fast dynamic response**

80+ Efficiency Cross Line and Load

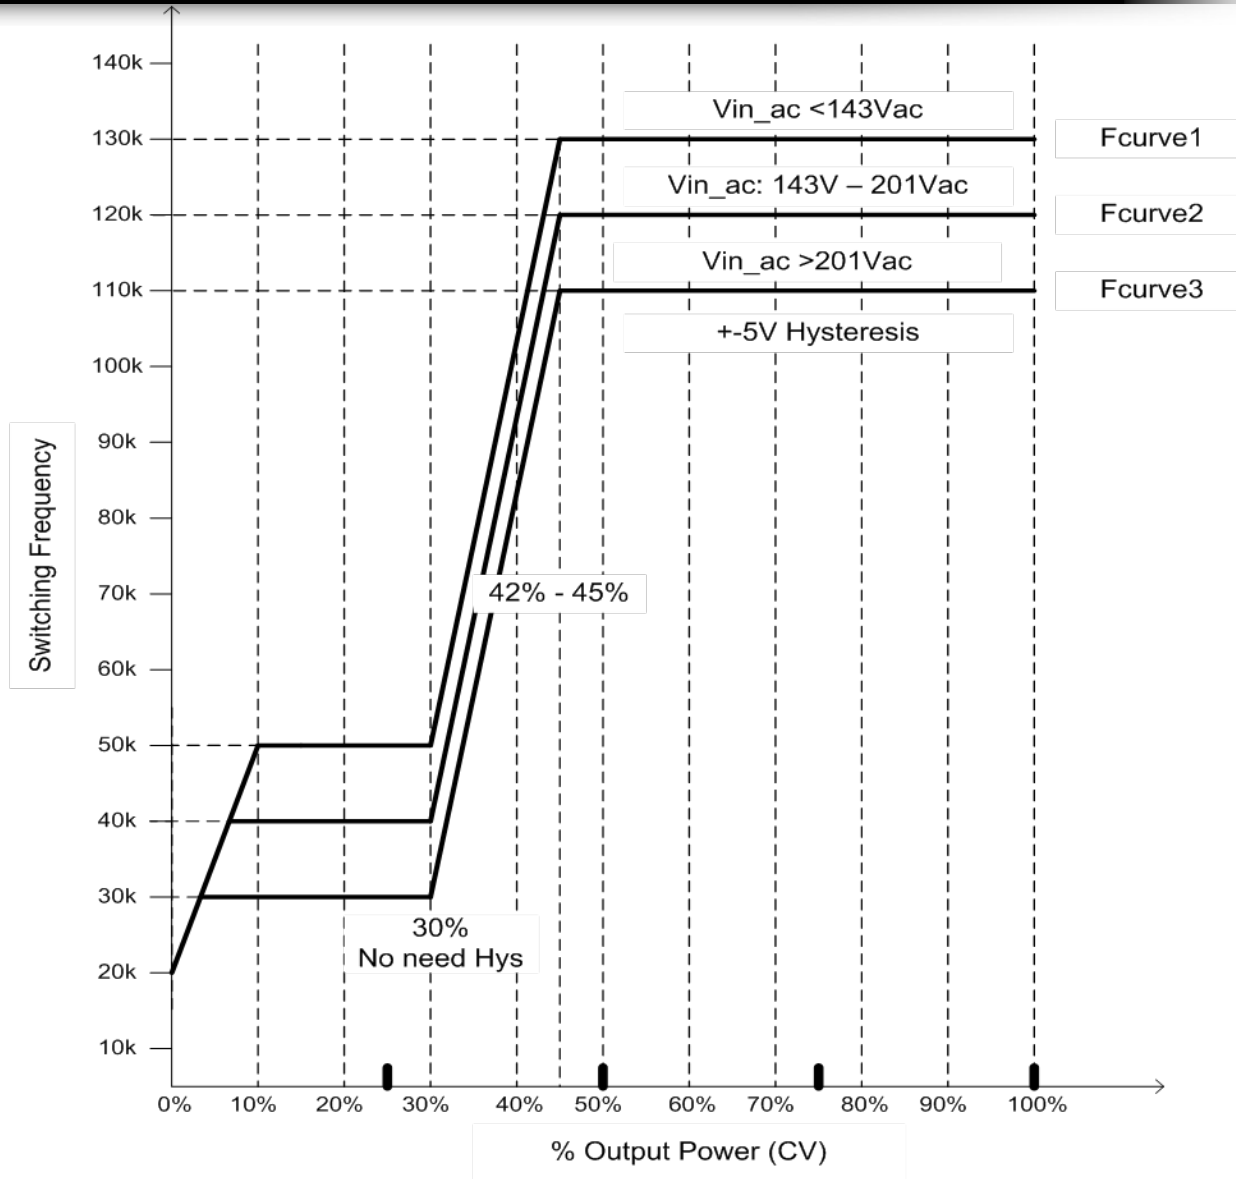

- Valley mode switching at CV heavy load (>45%)
- Valley mode switching at CC heavy load (Estimate>30%)
- Reduced switching frequency below 25% load
- Reduced switching frequency at high input voltage
- DPFM at light load

- The transformer resets at time T1.
- The magnetizing inductance L_m and the capacitance seen from drain of power switch starts resonance at period T_{res} . At time T3, the resonant voltage reaches the lowest position.
- If the switch turns on at T3 (so-called “quasi-resonant” or “valley mode” switching), the switching loss is minimized. Because of low dV/dt , the EMI can also be reduced comparing to the typical non-valley mode switching design.
- iWatt has successful experience on valley mode switching from previous design and research practice.

Patented Switching Frequency Map

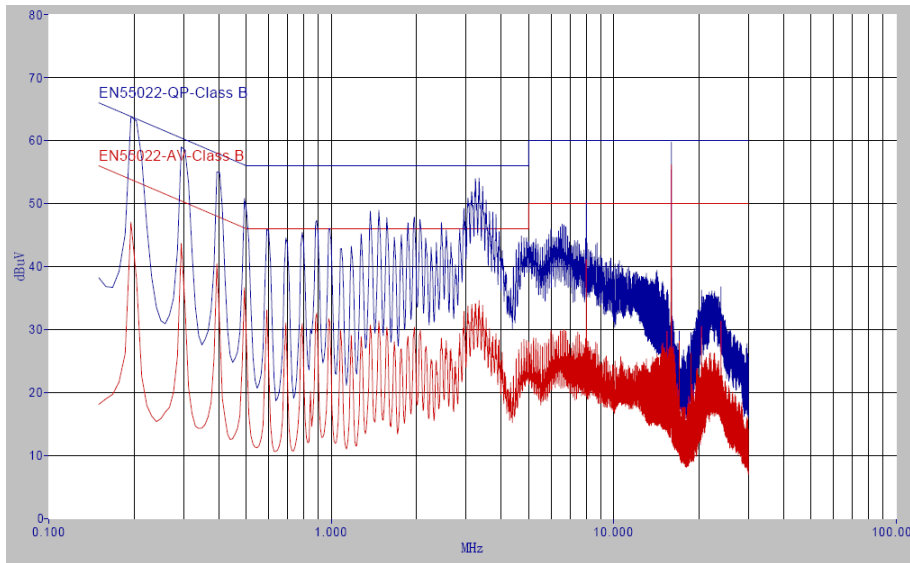

- Dynamic gate driver impedance to control the turn-on and turn-off speed
- Digitalized Frequency Spectrum Spread
- 130kHz maximum frequency limit
- Valley mode switching to reduce the turn-on spike

Traditional QR Solution

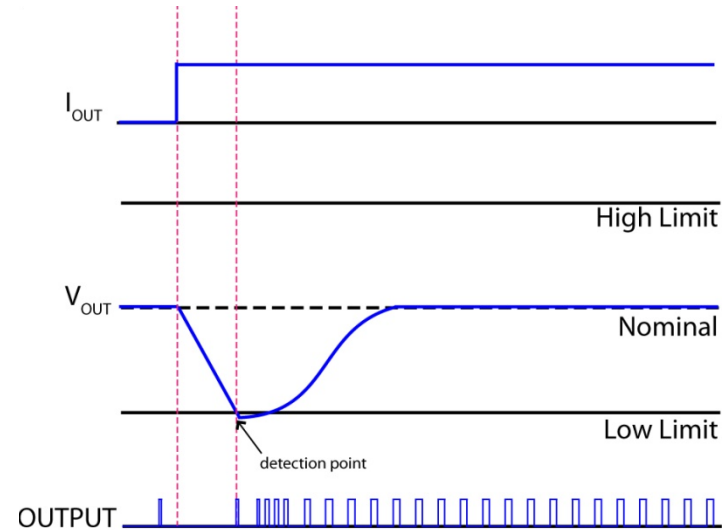

iW1691 Solution

Adaptive Fast Load Transient Detection

Heavy Load to Light Load

Light Load to Heavy Load

- Primary voltage feedback responds to the load change cycle-by-cycle
- A proprietary hysteresis control method to speed up the dynamic response in addition to the traditional Proportional-Integration-Differential (PID) control
- When the output voltage reaches the high limit, iW1691 increases the off-time immediately to reduce the output power; If the output voltage reaches the low limit. iW1691 increases the switching frequency immediately to quickly compensate for the output voltage drop.

Result From Fast Dynamic Response

Load 0A - 1A - 0A

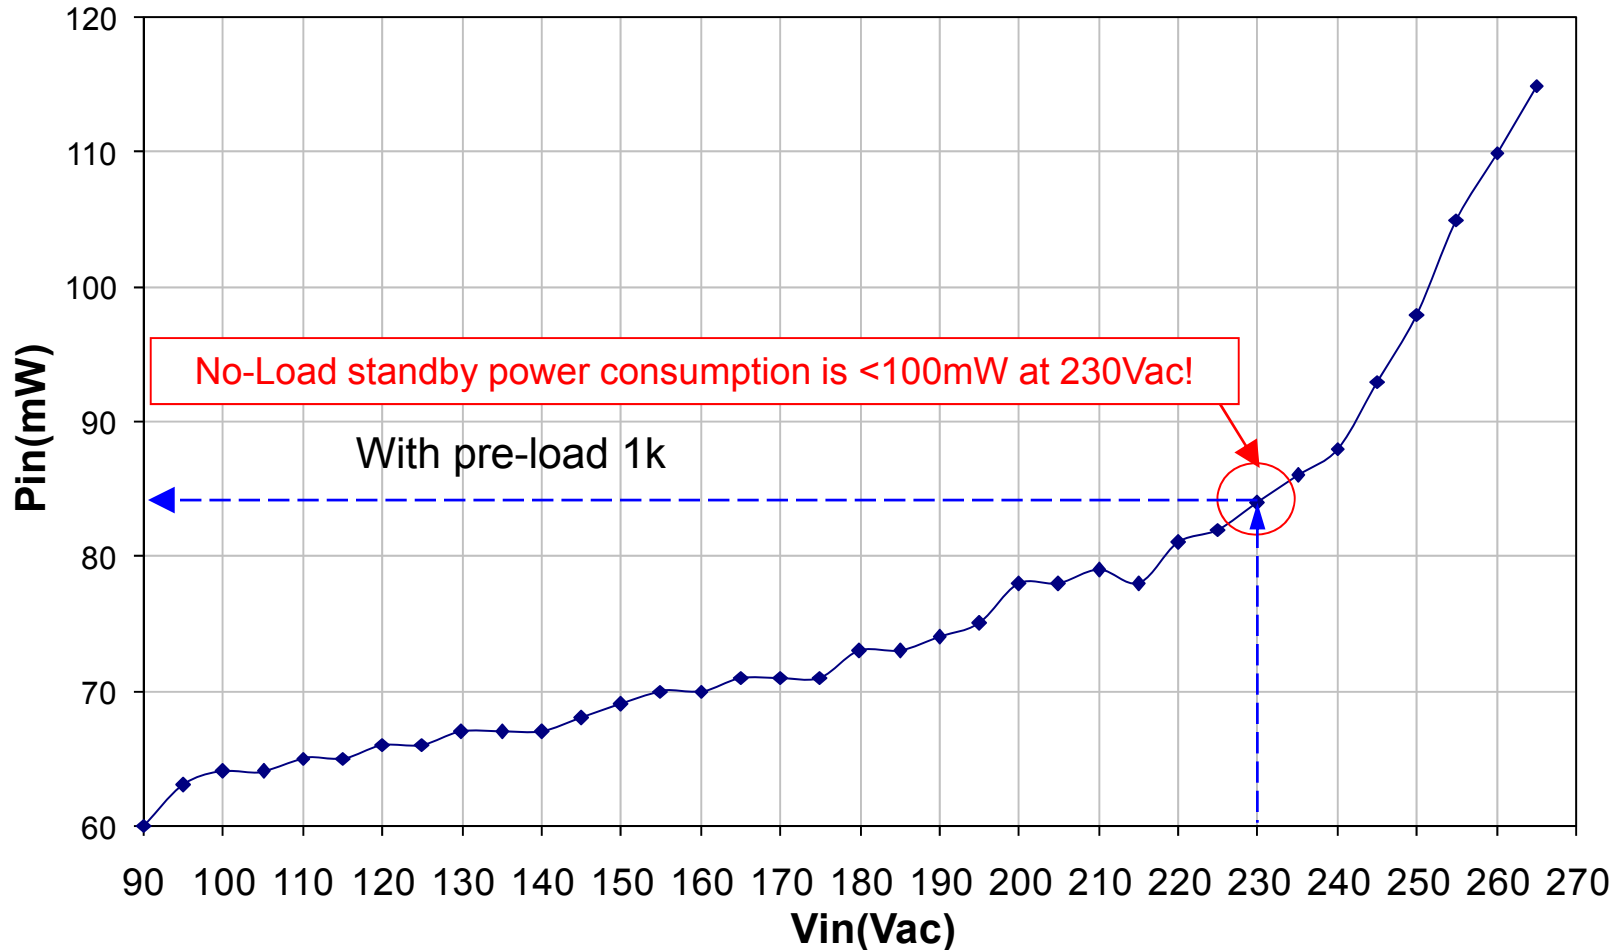

Load 1A - 2A - 1A

■ Low power management

- Increase system output stability in no load condition to allow high pre-load resistance.
- Put system into sleep mode in between the long output trains.

No-Load Standby Power Consumption
