

IS-2100ARH**Neutron Test Report**TR065
Rev.0.00
Apr 4, 2018**Introduction**

This report summarizes results of 1MeV equivalent neutron testing of the [IS-2100ARH](#) High Frequency Half Bridge Driver. The test was conducted to determine the sensitivity of the part to Displacement Damage (DD) caused by neutron or proton environments. Neutron fluences ranged from $7.3 \times 10^{11} \text{ n/cm}^2$ to $3.2 \times 10^{13} \text{ n/cm}^2$. This project was carried out in collaboration with Honeywell Aerospace Corporation and their support is gratefully acknowledged.

Product Description

The radiation hardened IS-2100ARH is a high frequency, 100V half bridge N-Channel MOSFET driver, which is a functional, pin-to-pin replacement for the Renesas HIP2500 and the industry standard 2110 types. The low-side and high-side gate drivers are independently controlled. This gives the user maximum flexibility in dead time selection and driver protocol.

The device also has on-chip error detection and correction circuitry, which monitors the state of the high-side latch and compares it to the H_{IN} signal. If the states do not match, a set or reset pulse is generated to correct the high-side latch. This feature protects the high-side latch from Single Event Upsets (SEUs).

Undervoltage on the high-side supply forces HO low. When that supply returns to a valid voltage, HO will go to the state of H_{IN} . Undervoltage on the low-side supply forces both LO and HO low. When that supply becomes valid, LO returns to the L_{IN} state and HO returns to the H_{IN} state.

These devices are constructed with the Renesas dielectrically isolated Rad Hard Silicon Gate (RSG) BiCMOS process. They are immune to single event latch-up and have been specifically designed to provide highly reliable performance in harsh radiation environments.

Specifications for radiation hardened QML devices are controlled by the Defense Logistics Agency (DLA) in Columbus, OH. The SMD is the controlling document and must be cited when ordering.

1. Test Description**1.1 Irradiation Facility**

Neutron fluence irradiations were performed on the test samples on July 8, 2015, at the WSMR Fast Burst Reactor (FBR) per MIL-STD-883G, Method 1017.2, with each part unpowered during irradiation and all leads shorted. Because neutron irradiation activates many of the heavier elements found in a packaged integrated circuit, the parts exposed at the higher neutron levels required (as expected) some cool-down time before being shipped back to Renesas (Palm Bay, FL) for electrical testing.

1.2 Test Fixturing

No formal irradiation test fixturing is involved. These DD tests are bag tests, meaning that the parts are irradiated with all leads shorted together.

1.3 Characterization Equipment and Procedures

Electrical testing was performed before and after irradiation using Renesas production Automated Test Equipment (ATE). All electrical testing was performed at room temperature.

1.4 Experimental Matrix

Testing proceeded in general accordance with the guidelines of MIL-STD-883 TM 1017. The experimental matrix consisted of five samples irradiated at $7.3 \times 10^{11} \text{ n/cm}^2$, five samples irradiated at $1.8 \times 10^{12} \text{ n/cm}^2$, five samples irradiated at $1.2 \times 10^{13} \text{ n/cm}^2$, and five samples irradiated at $3.2 \times 10^{13} \text{ n/cm}^2$. Five control units were used.

IS-2100ARH samples were drawn from Lot G2X8LDA. Samples were packaged in the standard hermetic 16 lead ceramic flatpack production package, code CDFP4-F16. Samples were processed through burnin before irradiation and were screened to the SMD limits at room, low, and high temperatures before the start of neutron testing.

2. Results

The following section list the IS-2100ARH neutron testing results. Each neutron irradiation was performed on a different set of samples; this is *not* total dose testing, in which the damage is cumulative.

2.1 Attributes Data

Table 1. Attributes Data

Fluence, (n/cm ²)	Sample Size	Pass (Note 1)	Fail
7.3×10^{11}	10	10	0
1.8×10^{12}	5	5	0
1.2×10^{13}	5	5	0
3.2×10^{13}	5	5	0

Note:

1. "Pass" indicates a sample that passes all SMD limits.

2.2 Variables Data

The plots in [Figures 1](#) through [17](#) show data plots for key parameters before and after irradiation to each level. The plots show the mean of each parameter as a function of neutron irradiation. The plots also include error bars at each datapoint, representing the minimum and maximum measured values of the samples, although the error bars might not be visible in some plots due to their values compared to the scale of the graph. Although the applicable electrical limits taken from the SMD are also shown, these limits are provided for guidance only because the IS-2100ARH is not specified for the neutron environment.

All samples passed the post-irradiation SMD limits after all exposures up to and including $3.2 \times 10^{13} \text{ n/cm}^2$.

2.3 Variables Data Plots

Figure 1. IS-2100ARH quiescent V_{DD} supply current (I_{QDD}) with inputs low (L_{IN} and H_{IN}) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 2900µA maximum.

Figure 2. IS-2100ARH quiescent V_{CC} supply current (I_{QCC}) with inputs low or high following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 50µA maximum.

Figure 3. IS-2100ARH quiescent V_B supply current (I_{QB}) with inputs low or high following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 500µA maximum.

Figure 4. IS-2100ARH offset supply leakage current (I_{LK}) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 500µA maximum.

Figure 5. IS-2100ARH logic “1” input bias current (+I_{IN}) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 75µA maximum.

Figure 6. IS-2100ARH logic “0” input bias current (-I_{IN}) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is -10µV minimum.

Figure 7. IS-2100ARH undervoltage lockout voltage (V_{THUV}) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limits are 8V minimum and 12V maximum.

Figure 8. IS-2100ARH undervoltage lockout voltage hysteresis (V_{THUVs}) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limits are 250mV minimum and 2000mV maximum.

Figure 9. IS-2100ARH output high short-circuit current (pulsed) (+I_{OUT}, -I_{OUT}) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 0.9A minimum.

Figure 10. IS-2100ARH output voltage (differential from supply) (V_{OH}, V_{OL}) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 0.1V maximum.

Figure 11. IS-2100ARH high-side and low-side turn-off propagation delay (tL_off, tH_off) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 360ns maximum.

Figure 12. IS-2100ARH high-side and low-side turn-on propagation delay (tL_on, tH_on) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 425ns maximum.

Figure 13. IS-2100ARH high-side and low-side shutdown propagation delay (tL_sd, tH_sd) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 400ns maximum.

Figure 14. IS-2100ARH output rise and fall times (tR, tF) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limit is 40ns maximum.

Figure 15. IS-2100ARH dead time (LO turn-off to HO turn-on) (DH_ton) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limits are -20ns minimum and 75ns maximum.

Figure 16. IS-2100ARH dead time (HO turn-off to LO turn-on) (DL_ton) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limits are 10ns minimum and 100ns maximum.

Figure 17. IS-2100ARH turn-on propagation delay matching (M_{ton}) following neutron irradiation to each level. The error bars represent the minimum and maximum measured values. The SMD limits are -20ns minimum and 60ns maximum.

3. Discussion and Conclusion

This document reports the results of 1MeV equivalent neutron testing of the IS-2100ARH radiation hardened high frequency half bridge driver. Parts were tested at $7.3 \times 10^{11} \text{ n/cm}^2$, $1.8 \times 10^{12} \text{ n/cm}^2$, $1.2 \times 10^{13} \text{ n/cm}^2$, and $3.2 \times 10^{13} \text{ n/cm}^2$. All samples passed the SMD limits after all exposures up to and including $3.2 \times 10^{13} \text{ n/cm}^2$. The results of key parameters before and after irradiation to each level are plotted in [Figures 1](#) through [17](#). The plots show the mean of each parameter as a function of neutron irradiation, with error bars that represent the minimum and maximum measured values. The figures also show the applicable electrical limits taken from the SMD, but these limits are provided for guidance only because the IS-2100ARH is not specified for the neutron environment.

3.1 Reported Parameters

Figure	Parameter	Limit, Low	Limit, High	Units	Notes
1	Quiescent V_{DD} supply current (inputs low)		2900	μA	All inputs = 0V
2	Quiescent V_{CC} supply current		50	μA	$V_{IN} = 0\text{V}$ or V_{DD}
3	Quiescent V_B supply current		500	μA	$V_{IN} = 0\text{V}$ or V_{DD}
4	Offset supply leakage current		500	μA	$V_B = V_S = 150\text{V}$
5	Logic "1" input bias current		75	μA	$V_{IN} = V_{DD}$
6	Logic "0" input bias current	-10		μA	$V_{IN} = 0\text{V}$
7	V_{DD} / V_{SS} undervoltage lockout threshold	8	12	V	
8	V_{DD} / V_{SS} undervoltage lockout threshold hysteresis	250	2000	mV	
9	Output high short-circuit pulsed current	0.9		A	$V_{OUT} = 0\text{V}$, $PW < 80\mu\text{S}$
10	Output voltage		0.1	V	$I_{OUT} = 0\text{mA}$, $V_{BIAS} - V_{OH}$
11	Turn-off propagation delay		360	ns	$C_L = 1000\text{pF}$
12	Turn-on propagation delay		425	ns	$C_L = 1000\text{pF}$

Figure	Parameter	Limit, Low	Limit, High	Units	Notes
13	Shutdown propagation delay		400	ns	$C_L = 1000\text{pF}$
14	Output rise/fall time		40	ns	$C_L = 1000\text{pF}$
15	Dead time LO turn-off to HO turn-on	-20	75	ns	$C_L = 1000\text{pF}$
16	Dead time HO turn-off to LO turn-on	10	100	ns	$C_L = 1000\text{pF}$
17	Propagation delay matching	-20	60	ns	$C_L = 1000\text{pF}$

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
 2. Renesas Electronics hereby expressly disclaims any warranties against liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
 6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
 7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
 11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
