# FUNCTIONAL BLOCK DIAGRAM

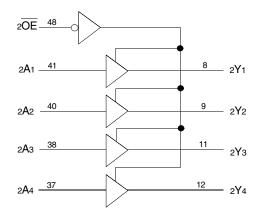

# **DESCRIPTION**:

The LVC162244A 16-bit buffer/driver is built using advanced dual metal CMOS technology. The LVC162244A is designed specifically to improve both the performance and density of 3-state memory address drivers, clock drivers, and bus-oriented receivers and transmitters. The device can be used as four 4-bit buffers, two 8-bit buffers, or one 16-bit buffer. This device provides true outputs and symmetrical active-low output-enable  $(\overline{OE})$  inputs.

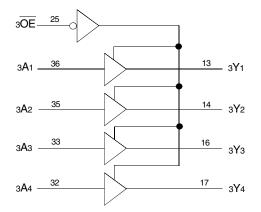

All pins of this 16-bit buffer/driver can be driven from either 3.3V or 5V devices. This feature allows the use of the device as a translator in a mixed 3.3V/5V supply system.

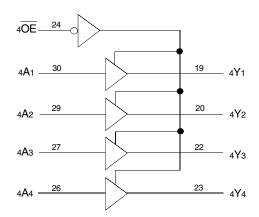

The LVC162244A has series resistors in the device output structure which will significantly reduce line noise when used with light loads. This driver has been developed to drive  $\pm 12$ mA at the designated threshold levels.
