

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

General Description

DA9130-A is a power management IC (PMIC) suitable for supplying CPUs, GPUs, DDR memory rails in single in-line pin package (SIPP) modules, vehicle infotainment systems, ADAS, automotive navigation, centre console and telematics.

DA9130-A operates as a single-channel dual-phase buck converter, each phase requiring a small external 0.22 μ H inductor. It is capable of delivering up to 10 A output current at a 0.3 V to 1.9 V output voltage range. The 2.8 V to 5.5 V input voltage range is suitable for a wide variety of low-voltage systems.

With remote sensing, the DA9130-A guarantees the highest accuracy and supports multiple PCB routing scenarios without loss of performance.

The pass devices are fully integrated, so no external FETs or Schottky diodes are needed.

A programmable soft start-up can be enabled, which limits the inrush current from the input node and secures a slope-controlled rail activation.

The dynamic voltage control (DVC) supports adaptive adjustment of the supply voltage dependent on the processor load, via either a direct register write using the communication interface (I²C-compatible) or with a programmable input pin.

A configurable GPI allows multiple I²C address selection for multiple instances of DA9130-A in the same application.

DA9130-A has integrated over-temperature and over-current protection for increased system reliability, without the need for external sensing components.

Key Features

- 2.8 V to 5.5 V input voltage
- 0.3 V to 1.9 V output voltage
- Up to 10 A output current
- 4 MHz nominal switching frequency
- Dual-phase operation
- 220 nH inductor per phase
- 20 μ F output capacitor
- ± 1 % output voltage accuracy (static)
- ± 5 % load transient (dynamic)
- Programmable GPIOs
- Programmable soft startup
- I²C-compatible interface (FM+)
- Voltage, current, and temperature supervision
- 24-pin FCQFN package, wettable flanks (nom. 3.3 mm x 4.8 mm)
- 218 mm² total solution area
- -40 °C to +105 °C ambient temperature range
- AEC-Q100 Grade 2 qualified for Automotive applications

Benefits

- High Efficiency buck converters deliver outstanding thermal performance
- Fully integrated switching FET's means no external FETs or Schottky diodes are required
- Remote sensing guarantees the highest accuracy and supports multiple PCB routing scenarios without loss of performance.
- Fully programmable soft-start limits the inrush current from the input to give a slope-controlled output voltage.
- Dynamic voltage control (DVC) enables adaptive adjustment of the device output voltage depending on the load. This increases efficiency when the downstream circuitry enters low power or idle mode, resulting in power savings.
- Configurable GPIOs support a range of features including I²C, DVC and Power-Good indicator.

DA9130-A

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

- Optimized BoM cost and footprint: Each output requires a very small inductor and capacitor delivering parts and cost savings
- Cycle by cycle current limiting for superior over-current protection

Applications

- Vehicle infotainment systems
- ADAS
- Automotive navigation
- Automotive center console
- Automotive cluster
- Telematics
- SIPP modules (SoC, DRAM)
- SoC/FPGA based, high performance, automotive Electronic Control unit (ECU) requiring efficient, high current, power delivery

3 Characteristics

3.1 Absolute Maximum Ratings

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, so functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specification are not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Table 3: Absolute Maximum Ratings

Parameter	Description	Conditions	Min	Max	Unit
T _{STG}	Storage temperature		-65	150	°C
T _J	Junction temperature		-40	150	°C
V _{SYS}	System supply voltage		-0.3	6.0	V
V _{PIN}	Voltage on pins		-0.3	6.0	V

3.2 Recommended Operating Conditions

Table 4: Recommended Operating Conditions

Parameter	Description (Note 2)	Conditions (Note 1)	Min	Typ	Max	Unit
V _{SYS}	System supply voltage		2.8		5.5	V
V _{PIN}	Voltage on pins		-0.3		V _{SYS} + 0.3	V
T _J	Junction temperature		-40		125	°C
T _A	Ambient temperature		-40		105	°C

Note 1 Within the specified limits, a lifetime of 10 years is guaranteed. If operating outside of these recommended conditions, please consult with Renesas.

Note 2 V_{SYS}, V_{IN}, V_{PVDD}, V_{AVDD} should be connected together. The pin names are different for routing purposes.

Electrical Performance						
V _{OUT}	Output voltage, configurable in 10 mV steps	I _{OUT} = 0 mA to I _{MAX} at 25 °C ambient 2.8 V < V _{OUT} + 1 V < V _{IN} ≤ 5.5 V	0.3		1.9	V
I _{LIM}	Current limit, configurable per phase Note 1 Note 2	CHx_ILIM = 1010	-20 %	8	+20 %	A
I _{MAX}	Output current Note 3	V _{IN} ≥ V _{OUT} + 1 V 5 A per phase	10			A
V _{OUT_ACC}	Output voltage accuracy, including static line and load regulation	V _{OUT} ≥ 1 V	-1		1	%
V _{OUT_ACC}	Output voltage accuracy, including static line and load regulation	V _{OUT} < 1 V	-10		10	mV
V _{THR_PG_HYS}	Power-good voltage threshold hysteresis	V _{OUT} = V _{THR_PG_DWN}	60	80	100	mV

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Parameter	Description	Conditions	Min	Typ	Max	Unit
V _{THR_PG_DWN}	Power-good voltage threshold for falling	V _{OUT} = V _{BUCK}	-160	-130	-80	mV
V _{THR_HV}	High V _{OUT} voltage threshold	V _{OUT} = V _{BUCK}	100	150	200	mV
V _{OUT_TR_LINE}	Line transient response	V _{IN} = 3 V to 3.6 V I _{OUT} = 0.5 * I _{MAX} dt = 10 μs		15		mV
f _{SW}	Switching frequency			4		MHz
t _{ON_MIN}	Minimum turn-on pulse 0 % duty is also supported		5	7	11	ns
t _{BUCK_EN}	Turn-on time	CHx_EN = high			20	μs
R _{PD}	Output pull-down resistance for each phase at the LX node, see BUCK<x>_PD_DIS	V _{IN} = 3.7 V V _{OUT} = 0.5 V	145	150	161	Ω
R _{ON_P MOS}	On resistance of switching PMOS, per phase	V _{IN} = 3.7 V	17	25	37	mΩ
R _{ON_N MOS}	On resistance of switching NMOS, per phase	V _{IN} = 3.7 V	6	10	16	mΩ
PWM Mode						
I _{THR_1PH_TO_2PH}	Current threshold for automatic phase shedding 1-phase to 2-phase			2.25		A
I _{THR_2PH_TO_1PH}	Current threshold for automatic phase shedding 2-phase to 1-phase			1.7		A
I _{Q_PWM_2PH}	Quiescent current, per phase	V _{IN} = 3.7 V No load		16		mA
η _{PWM}	Efficiency, phase shedding	V _{IN} = 3.6 V V _{OUT} = 1 V I _{OUT} = 5 % (I _{MAX}) to 80 % (I _{MAX})		85		%
AUTO Mode						
V _{OUT_TR_LD_2PH}	Load transient response, phase shedding enabled	V _{OUT} = 1 V I _{OUT} = 2.5 to 7.5 A at 25 °C ambient dI/dt = 5 A/μs	-25		45	mV

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Parameter	Description	Conditions	Min	Typ	Max	Unit
PFM Mode						
I _{Q_PFM_2PH}	Quiescent current in PFM	V _{IN} = 3.7 V No load No switching		164		μA
η _{PFM}	Efficiency	V _{IN} = 3.6 V V _{OUT} = 1 V I _{OUT} = 10 mA		83		%

Note 1 t_{ON} > 40 ns

Note 2 The value is configured by OTP and should not be modified while the buck is active.

Note 3 For short durations to meet peak current requirements, I_{OUT} can be operated at up to 10 % higher than the specified maximum operating condition. The part should not be operated in this mode for extended periods and is not guaranteed for continuous operation.

3.5 Performance and Supervision Characteristics

Table 9: Electrical Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Unit
Electrical Performance						
V _{THR_POR}	Power-on-reset threshold	Threshold for AVDD falling		2.1	2.25	V

Figure 6: DA9130-A Efficiency, PWM Mode with no Phase Shedding

Figure 7: DA9130-A Efficiency, Auto Mode with Phase Shedding

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

4 Functional Description

4.1 DC-DC Buck Converter

DA9130-A operates as a single-channel dual-phase buck converter capable of delivering up to 10 A output current at a 0.3 V to 1.9 V output voltage range.

The buck converter has two voltage registers. One defines the normal output voltage, while the other offers an alternative retention voltage. In this way, different application power modes can easily be supported. The voltage selection can be operated either via GPI or via control interface to guarantee the maximum flexibility according to the specific host processor status in the application.

When a buck is enabled, its output voltage is monitored and a power good signal indicates that the buck output voltage has reached a level higher than the $V_{THR_PG_HYS}$ threshold. The power good status is lost when the voltage drops below $V_{THR_PG_DWN}$ or increases above V_{THR_HV} . The status of the power good indicator can be read back via I²C from the PG1 status bit. It can be also individually assigned to any of the GPIOs by setting the GPIO mode registers to PG1 output.

The buck converter is capable of supporting DVC transitions that occur when:

- the active and selected A- or B-voltage is updated to a new target value
- the voltage selection is changed from the A- to B-voltage (or B- to A-voltage) using CH1_VSEL

The DVC controller operates in pulse width modulation (PWM) mode with synchronous rectification.

The slew rate of the DVC transition is programmed at 10 mV per 8 μ s, 4 μ s, 2 μ s, 1 μ s, or 0.5 μ s in register bits CH1_SR_DVC.

A pull-down resistor (typically 150 Ω) for each phase is always activated unless it is disabled by setting register bits CH1_PD_DIS to 1.

4.1.1 Switching Frequency

The buck switching frequency, nominally 4 MHz, can be tuned using register bit OSC_TUNE. The internal 8 MHz oscillator frequency is tuned in ± 160 kHz steps. This impacts the buck converter frequency in steps of 80 kHz and helps to mitigate possible disturbances to other high frequency systems in the application.

4.1.2 Operation Modes and Phase Selection

The buck converters can operate in PWM and PFM modes. The operating mode is selected using register bits CH1_<A or B>_MODE.

Phase shedding automatically changes between 1- and 2-phase operation at a typical current of 2.0 A.

If the automatic operation mode is selected on CH1_<A or B>_MODE, the buck converter automatically changes between synchronous PWM mode and PFM depending on the load current. This improves the efficiency across the whole range of output load currents.

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

4.1.3 Output Voltage Selection

The switching converter can be configured using the I²C interface.

Two output voltages can be pre-configured in registers CH1_<A or B>_VOUT. The output voltage can be selected by either toggling register bit CH1_VSEL or by re-programming the selected voltage control register. Both changes will result in ramped voltage transitions. After being enabled, the buck converter will, by default, use the register settings in CH1_A_VOUT unless the output voltage selection is configured via the GPI port.

Registers CH1_VMAX limit the output voltage that can be set for each of the respective buck converters.

Figure 8: Buck Output Voltage Control Concept

4.1.4 Soft Start-Up and Shutdown

To limit in-rush current from VSYS, the buck converter can perform a soft-start after being enabled. The start-up behavior is a compromise between acceptable inrush current from the battery and turn-on time. Ramp times can be configured in register CH1_SR_STARTUP. Rates higher than 20 mV/μs may produce overshoot during the start-up phase, so it should be considered carefully.

A ramped power down can be selected in register bits CH1_SR_SHDN. When no ramp is selected (immediate power down), the output node will be discharged only by the pull-down resistor, if enabled in register CH1_PD_DIS.

4.1.5 Current Limit

The integrated current limit protects the power stages and external coil from excessive current. The buck current limit should be configured to at least 40 % higher than the required maximum output current.

When the current limit is reached, the buck converter generates an event and an interrupt to the host processor unless the interrupt has been masked using register M_OC1 in SYS_MASK_1. Register bit OC_DVC_MASK is used to mask over-current events during DVC transitions.

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

4.1.6 Thermal Protection

DA9130-A is protected from internal overheating by thermal shutdown.

There are two kinds of flags concerning thermal protection, thermal warning and thermal critical. The warning flag is asserted when $T_J > T_{WARN}$ and the critical flag is asserted when $T_J > T_{CRIT}$. When the critical flag is asserted, Buck1 is shut down immediately.

Table 12: Thermal Protection Control Registers

Category	Register name	Description
Status	TEMP_WARN	Asserted as long as the thermal warning threshold is reached
	TEMP_CRIT	Asserted as long as the thermal shutdown threshold is reached
IRQ event	E_TEMP_WARN	TEMP_WARN caused event
	E_TEMP_CRIT	TEMP_CRIT caused event
IRQ mask	M_TEMP_WARN	TEMP_WARN event IRQ mask
	M_TEMP_CRIT	TEMP_CRIT event IRQ mask
	M_VR_HOT	TEMP_WARN status IRQ mask

Figure 9: Thermal Protection Operation

4.2 Internal Circuits

4.2.1 IC_EN/Chip Enable/Disable

IC_EN is chip enable/disable control input. When IC_EN = 0, all blocks except for low I_Q POR are powered-down and buck output is pulled-down.

4.2.2 nIRQ/Interrupt

The interrupt triggers events. Trigger conditions and control registers for each interrupt event are listed in [Table 13](#).

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Some of these events are categorized as fault events and affect device operation (for example, buck disable), see Section 4.1.6.

Table 13: Interrupt List

Name	Polarity (Note 1)	Trigger	IRQ Status Register	IRQ Mask Register	Deglitch Period
Thermal warning (event)	N	T_J rising above T_{WARN}	E_TEMP_WARN	M_TEMP_WARN	0 s
Thermal critical (event)	N	T_J rising above T_{CRIT}	E_TEMP_CRIT	M_TEMP_CRIT	0 s
System Good (event)	P	Buck1 PG event	E_SG	M_SG	0s
Buck1 power-good (event)	P	Buck1 V_{OUT} is in power-good voltage range (not under- or over-voltage)	E_PG1	M_PG1	0 s
Buck1 over-voltage (event)	N	Buck1 V_{OUT} rising above over-voltage threshold (target voltage + 150 mV)	E_OV1	M_OV1	Rise:8 μ s Fall:8 μ s
Buck1 under-voltage (event)	N	Buck1 V_{OUT} falling below under-voltage threshold (target voltage - V_{TH_PG})	E_UV1	M_UV1	0 s
Buck1 over-current (event)	N	Buck1 current rising above over-current threshold	E_OC1	M_OC1	0 s
Buck1 power-good (status) (Note 2)	P	Buck1 V_{OUT} is in power-good voltage range (not under- or over-voltage)	PG1	M_PG1_STAT (Note 3)	0 s
System good (status) (Note 2)	P	Buck1 PG is active	SG	S_PG_STAT (Note 3)	0 s
Thermal warning (status) (Note 2)	N	T_J rising above T_{WARN}	TEMP_WARN	M_VR_HOT (Note 3)	0 s
GPIO0 change (event)	N	Detect GPIO0 change for active trigger selected GPIO0_TRIG register	E_GPIO0	M_GPIO0	100 μ s/ 1 ms/ 10 ms/ 100 ms
GPIO1 change (event)	N	Detect GPIO1 change for active trigger selected GPIO1_TRIG register	E_GPIO1	M_GPIO1	

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Name	Polarity (Note 1)	Trigger	IRQ Status Register	IRQ Mask Register	Deglintch Period
GPIO2 change (event)	N	Detect GPIO2 change for active trigger selected GPIO2_TRIG register	E_GPIO2	M_GPIO2	

Note 1 Polarity at the source of the flag: P = active-high, N = active-low.
General rule is: normal system state is high, and abnormal system state is low (for example, PG = high means power-good, TEMP_CRIT = low when TEMP critical state).

Note 2 Interrupt outputs the status as is. I²C write is not required for interrupt clear.

Note 3 OTP load value defined by CONF pin setting if CONF_EN = 1.

Table 14: Interrupt Registers Except for Power Good Status

Register	Description
E_<name>	Read-only interrupt event register 0: No interrupt 1: Interrupt occurred Cleared after being written to I²C. Set until IRQ is removed.
M_<name>	Interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. Event register (E_<name>) is updated.

Table 15: Interrupt Registers for Power Good and Temp Warning Status

Register	Description
PG<x>	Buck<x> power good status. Asserted as long as the buck<x> output voltage is in range (under-voltage threshold < buck output voltage < over-voltage threshold) 0: Not power good 1: Power good
M_PG<x>_STAT	Power good status interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. Power good status register (PG<x>) is updated
TEMP_WARN	Asserted as long as the thermal warning threshold (T _{WARN}) is reached 0: Junction temperature is below T _{WARN} 1: Junction temperature is above T _{WARN}
M_VR_HOT	Temperature warning status (TEMP_WARN) interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. Temperature warning status register (TEMP_WARN) is updated
SG	System good. Asserted as long as the buck1 PG signal is high 0: Not system good 1: System good

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Figure 10: Interrupt Operation Example

4.2.3 GPIO

4.2.3.1 GPIO Pin Assignment

The DA9130-A provides up to five GPIO pins, three if the I²C is enabled, see Table 16. These registers are OTP programmable. When CONF_EN = 1 GPIO0 can be used for chip configuration.

Any register settings for GPIO3 and GPIO4 are ignored and GPIO3 and GPIO4 function as SCL and SDA respectively if I2C_EN = 1.

Table 16: GPIO Pin Assignment

OTP Option		GPIO Pin					Available GPIOs
I2C_EN	CONF_EN	CONF/GPIO0	GPIO1	GPIO2	SCL/GPIO3	SDA/GPIO4	
1'b0	1'b0	GPIO0	GPIO1	GPIO2	GPIO3	GPIO4	5
	1'b1	CONF	GPIO1	GPIO2	GPIO3	GPIO4	4
1'b1	1'b0	GPIO0	GPIO1	GPIO2	SCL	SDA	3
	1'b1	CONF	GPIO1	GPIO2	SCL	SDA	2

4.2.3.2 GPIO Function

The GPIOs pins are configurable as the following functions in register GPIO<x>_MODE (x = 0 to 4):

- Buck1 enable input (EN1)
- Buck1 DVC control input (DVC1)
- Buck1 OTP setting reload input (RELOAD)
- Buck1 power good output (PG1)
- System good output (SG)
- Interrupt output (nIRQ)

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Table 17: GPIO Function Configuration

GPIO<x>_MODE[3:0]	Function	IO Condition
4'h0	GPIO disable	HiZ
4'h1	EN1	In
4'h2	Reserved	In
4'h3	Reserved	In
4'h4	DVC1	In
4'h5	Reserved	In
4'h6	Reserved	In
4'h7	RELOAD	In
4'h8	PG1	Out
4'h9	Reserved	Out
4'hA	Reserved	Out
4'hB	SG	Out
4'hC	nIRQ	Out
4'hD	Reserved	HiZ
4'hE	Low level	Out
4'hF	High level	Out

4.2.3.3 Chip Configuration Select (CONF)

GPIO0 functions as chip configuration select (CONF) input when CONF_EN = 1.

Three different chip configurations can be selected according to the CONF pin level, whether it is HIGH, LOW, or Hi-Z. [Table 18](#) lists the device configurations that can be modified if CONF_EN = 1.

Table 18: GPIO0-Configurable Registers when CONF_EN = 1

Register Name	Description
IF_SLAVE_ADDR[6:0]	I ² C slave address
CH1_A_MODE[1:0]	CH1_A Operation mode select
CH1_B_MODE[1:0]	CH1_B Operation mode select
CH1_VSEL	CH1 output voltage and operation selection
CH1_EN	CH1 enable
CH1_A_VOUT[7:0]	CH1 output voltage setting A
CH1_B_VOUT[7:0]	CH1 output voltage setting B
M_PG1_STAT	IRQ mask setting for CH1 power good status
M_VR_HOT	IRQ mask setting for temp warning status
GPIO1_MODE[3:0]	GPIO1 mode setting
GPIO2_MODE[3:0]	GPIO2 mode setting
GPIO1_OBUF	GPIO1 output buffer select
GPIO2_OBUF	GPIO2 output buffer select
GPIO1_TRIG[1:0]	GPIO1 input trigger select
GPIO1_POL	GPIO1 polarity select

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Register Name	Description
GPIO1_PUPD	GPIO1 pull-up/pull-down enable
GPIO1_DEB[1:0]	GPIO1 input debounce time setting
GPIO1_DEB_RISE	GPIO1 input debounce rising edge enable
GPIO1_DEB_FALL	GPIO1 input debounce falling edge enable
GPIO2_TRIG[1:0]	GPIO2 input trigger select
GPIO2_POL	GPIO2 polarity select
GPIO2_PUPD	GPIO2 pull-up/pull-down enable
GPIO2_DEB[1:0]	GPIO2 input debounce time setting
GPIO2_DEB_RISE	GPIO2 input debounce rising edge enable
GPIO2_DEB_FALL	GPIO2 input debounce falling edge enable

4.3 Operating Modes

4.3.1 ON

DA9130-A is ON when the IC_EN port is higher than V_{IH_EN} and the supply voltage is higher than V_{THR_POR} . Once enabled, the host processor can start communicating with DA9130-A using the control interface, after the t_{IC_EN} delay.

4.3.2 OFF

DA9130-A is OFF when the IC_EN port is lower than V_{IL_EN} . In OFF, the bucks are always disabled and LX nodes are pulled down by (typically 150 Ω) internal pull-down resistors.

4.4 I²C Communication

All features of DA9130-A can be controlled with the I²C interface which is enabled or disabled in register I2C_EN.

I2C_EN	Description
0	I ² C disable: SCL/GPIO3 and SDA/GPIO4 pins can be used as GPIO
1	I ² C enable: SCL/GPIO3 and SDA/GPIO4 pins are used as I ² C clock input and I ² C data input/output.

GPIO3 functions as the I²C clock and GPIO4 carries all the power manager bidirectional I²C data. The I²C interface is open-drain supporting multiple devices on a single line. The bus lines have to be pulled high by external pull-up resistors (2 k Ω to 20 k Ω). The standard frequency of the I²C bus is 1 MHz in fast-mode plus (FM+), 400 kHz in fast-mode, or 100 kHz in standard mode.

4.4.1 I²C Protocol

All data is transmitted across the I²C bus in eight-bit groups. To send a bit, the SDA line is driven towards the intended state while the SCL is low (a low SDA indicates a zero bit). Once the SDA has settled, the SCL line is brought high and then low. This pulse on SCL clocks the SDA bit into the receiver's shift register.

A two-byte serial protocol is used containing one byte for address and one byte data. Data and address transfer are transmitted MSB first for both read and write operations. All transmissions begin with the START condition from the master while the bus is in idle state (the bus is free). It is initiated by a high to low transition on the SDA line while the SCL is in the high state (a STOP condition is indicated by a low to high transition on the SDA line while the SCL is in the high state).

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Figure 11: I²C START and STOP Condition Timing

The I²C bus is monitored for a valid slave address whenever the interface is enabled. It responds immediately when it receives its own slave address. The acknowledge is done by pulling the SDA line low during the following clock cycle (white blocks marked with A in Figure 12 and Figure 13).

The protocol for a register write from master to slave consists of a START condition, a slave address with read/write bit, and the eight-bit register address followed by eight bits of data, terminated by a STOP condition. DA9130-A responds to all bytes with acknowledge (A), see Figure 12.

Figure 12: I²C Byte Write (SDA Line)

When the host reads data from a register it first has to write to DA9130-A with the target register address and then read from DA9130-A with a repeated START, or alternatively a second START, condition. After receiving the data, the host sends no acknowledge (A*) and terminates the transmission with a STOP condition, see Figure 13.

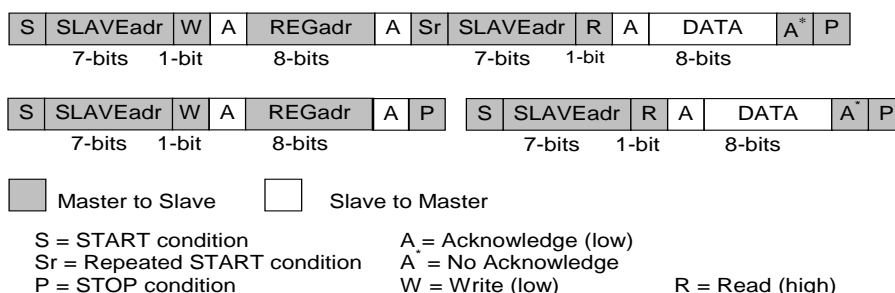

Figure 13: I²C Byte Read (SDA Line) Examples

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

6 Package Information

6.1 Package Outlines

Figure 14: Package Outline Drawing

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

6.2 Package Marking

Package Marking		
A1 Corner >	Marking Content	Format
1st	•	Pin 1 ID
2nd	D A 9 1 3 0	Orientation/Part No.
3rd	x x A T y y	OTP/Option/Year
4th	W W z z z z	Date Code
Date Code Format: yy = Year, ww = Week, zzzz = Traceability		
xx identifies the OTP Variant		
A or AT optionally indicate the Automotive and Automotive high temp test options.		

6.3 Moisture Sensitivity Level

The moisture sensitivity level (MSL) is an indicator for the maximum allowable time period (floor lifetime) in which a moisture sensitive plastic device, once removed from the dry bag, can be exposed to an environment with a specified maximum temperature and a maximum relative humidity before the solder reflow process. The MSL classification is defined in [Table 49](#).

For detailed information on MSL levels refer to the IPC/JEDEC standard J-STD-020, which can be downloaded from <http://www.jedec.org>.

The FCQFN package is qualified for MSL 3.

Table 49: MSL Classification

MSL Level	Floor Lifetime	Conditions
MSL 4	72 hours	30 °C / 60 % RH
MSL 3	168 hours	30 °C / 60 % RH
MSL 2A	4 weeks	30 °C / 60 % RH
MSL 2	1 year	30 °C / 60 % RH
MSL 1	Unlimited	30 °C / 60 % RH

6.4 Soldering Information

Refer to the IPC/JEDEC standard J-STD-020 for relevant soldering information. This document can be downloaded from <http://www.jedec.org>.

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

7 Ordering Information

The ordering number consists of the part number followed by a suffix indicating the packing method. For details and availability, please consult your Renesas [local sales representative](#).

Table 50: Ordering Information

Part Number	Package	Package Description	MOQ	Comment
DA9130-xxRT2-A	24 FCQFN wettable flanks, 3.3 x 4.8	T&R, 4800 pcs	3 Reels - 14400	AEC-Q100 Grade 2
DA9130-xxRT1-A	24 FCQFN wettable flanks, 3.3 x 4.8	Tray, 490 pcs	30 Trays - 14700 pcs	AEC-Q100 Grade 2
DA9130-xxRT2-AT	24 FCQFN wettable flanks, 3.3 x 4.8	T&R, 4800 pcs	3 Reels - 14400	AEC-Q100 Grade 2
DA9130-xxRT1-AT	24 FCQFN wettable flanks, 3.3 x 4.8	Tray, 490 pcs	30 Trays - 14700 pcs	AEC-Q100 Grade 2

8 Application Information

The following recommended components are examples selected from requirements of a typical application.

8.1 Capacitor Selection

Ceramic capacitors are used as bypass capacitors at all VDD and output rails. When selecting a capacitor, especially for types with high capacitance at smallest physical dimension, the DC bias characteristic has to be taken into account.

Table 51: Recommended Automotive Grade Capacitor Types

Application	Value (μF)	Size	Temp. Char.	Tol. (%)	V-Rate (V)	Type
VOUT output bypass	10	0805	X7R ±15%	±10	6.3	TDK CGA4J1X7R0J106K125AC
PVDDx bypass	10	3216	X7R ±15%	±10	16	Murata GCM31CR71C106KA64L
AVDD bypass	1	0805	X7R ±15%	±10	50	Murata GCM21BR71H105KA03L

8.2 Inductor Selection

Inductors should be selected based on the following parameters:

- Rated maximum current
Usually a coil provides two current limits: ISAT specifies the maximum current at which the inductance drops by 30 % of the nominal value, and IMAX is defined by the maximum power dissipation and is applied to the effective current.
- DC resistance
Critical for the converter efficiency and should therefore be minimized.

Table 52: Recommended Inductor Types

Value (μH)	Size (mm)	IMAX (DC) (A)	ISAT (A)	Tol. (%)	DC Resistance (mΩ)	Type
0.22	2.5 x 2.0 x 1.2	6.7	8	20	8	TDK TFM252012ALMAR22MTAA

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Status Definitions

Revision	Datasheet Status	Product Status	Definition
1.<n>	Target	Development	This datasheet contains the design specifications for product development. Specifications may be changed in any manner without notice.
2.<n>	Preliminary	Qualification	This datasheet contains the specifications and preliminary characterization data for products in pre-production. Specifications may be changed at any time without notice in order to improve the design.
3.<n>	Final	Production	This datasheet contains the final specifications for products in volume production. The specifications may be changed at any time in order to improve the design, manufacturing and supply. Major specification changes are communicated via Customer Product Notifications. Datasheet changes are communicated via www.dialog-semiconductor.com .
4.<n>	Obsolete	Archived	This datasheet contains the specifications for discontinued products. The information is provided for reference only.

RoHS Compliance

Dialog Semiconductor's suppliers certify that its products are in compliance with the requirements of Directive 2011/65/EU of the European Parliament on the restriction of the use of certain hazardous substances in electrical and electronic equipment. RoHS certificates from our suppliers are available on request.

High-Performance, 10 A, Dual-Phase DC-DC Converter for Automotive Applications

Important Notice and Disclaimer

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES ("RENESAS") PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for developers skilled in the art designing with Renesas products. You are solely responsible for (1) selecting the appropriate products for your application, (2) designing, validating, and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. Renesas grants you permission to use these resources only for development of an application that uses Renesas products. Other reproduction or use of these resources is strictly prohibited. No license is granted to any other Renesas intellectual property or to any third party intellectual property. Renesas disclaims responsibility for, and you will fully indemnify Renesas and its representatives against, any claims, damages, costs, losses, or liabilities arising out of your use of these resources. Renesas' products are provided only subject to Renesas' Terms and Conditions of Sale or other applicable terms agreed to in writing. No use of any Renesas resources expands or otherwise alters any applicable warranties or warranty disclaimers for these products.

Trademarks

Renesas and the Renesas logo are trademarks of Renesas Electronics Corporation. All trademarks and registered trademarks are the property of their respective owners.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
