

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

General Description

The DA9141-A is an Automotive grade, high efficiency, 25 A continuous and 40 A peak, four-phase, DC-DC stepdown converter (buck). It is fully AEC-Q100 qualified.

With remote sensing, the DA9141-A improves output voltage regulation at the point of load.

Fully integrated switching FETs means no external FETs or Schottky diodes are needed.

A programmable soft startup can be enabled, which limits the inrush current from the input node and secures a slope-controlled rail activation.

The dynamic voltage control (DVC) supports adaptive adjustment of the supply voltage dependent on the processor load, via either a direct register write using the communication interface (I²C compatible) or with a programmable input pin.

A configurable GPI allows multiple I²C address selection for multiple instances of DA9141-A in the same application.

DA9141-A has integrated over-temperature and over-current protection for increased system reliability, without the need for external sensing components.

Key Features

- 2.8 V to 5.5 V input voltage
- 0.5 V to 1.3 V output voltage
- Up to 40 A peak output current, 25 A continuous output current
- 4 MHz nominal switching frequency
- Quad-phase operation
- 110 nH inductor per phase
- 220 μ F output capacitor
- ± 1 % output voltage accuracy (static)
- ± 5 % load transient
- I²C-compatible interface (FM+)
- Programmable GPIOs
- Programmable soft startup
- Voltage, current, and temperature supervision
- Automotive Grade 1
- 60 FC-BGA 4.5 mm x 7 mm (0.65 mm pitch)
- 180 mm² total solution area
- AEC-Q100 qualified

Applications

- Navigation systems
- Telematics
- AI engines
- Automotive infotainment
- Advanced driver assistance systems (ADAS)
- SiPP modules

4 Characteristics

4.1 Absolute Maximum Ratings

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, so functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specification are not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

Note: Values are preliminary, pending final silicon characterization results.

Table 3: Absolute Maximum Ratings

Parameter	Description	Conditions	Min	Max	Unit
T _{STG}	Storage temperature		-65	150	°C
T _J	Junction temperature		-40	150	°C
V _{SYS}	System supply voltage		-0.3	6.0	V
V _{PIN}	Voltage on pins		-0.3	6.0	V

4.2 Electrostatic Discharge Ratings

Note: Values are preliminary, pending final silicon characterization results.

Table 4: Electrostatic Discharge Ratings

Parameter	Description	Conditions	Value	Unit
ESD _{HBM}	Maximum ESD protection	Human body model (HBM) All exposed pins	2	kV
ESD _{CDM}	Maximum ESD protection	Charged device model (CDM)	500 (Note 1)	V

Note 1 Increased to 750 V for corner balls.

4.3 Recommended Operating Conditions

Note: Values are preliminary, pending final silicon characterization results.

Table 5: Recommended Operating Conditions

Parameter	Description	Conditions	Min	Typ	Max	Unit
V _{SYS}	System supply voltage		2.8		5.5	V
V _{PIN}	Voltage on pins		-0.3		V _{SYS} + 0.3	V
T _J	Junction temperature		-40		150	°C
T _A	Ambient temperature		-40		125	°C

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

4.4 Thermal Characteristics

Note: Values are preliminary, pending final silicon characterization results.

Table 6: Package Ratings

Parameter	Description	Conditions	Min	Typ	Max	Unit
θ_{JA}	Thermal resistance junction to ambient	No heatsink Note 1		16.4		°C/W
		With heatsink Note 2		9.6		°C/W
θ_{JB}	Thermal resistance junction to board	Note 1		9.2		°C/W
θ_{JC}	Thermal resistance junction to case	Note 1		7.0		°C/W
P_D	Maximum power dissipation, see Section 4.4.1	No heatsink Derating factor above $T_A = 85^\circ\text{C}$: $60.9 \text{ mW}/^\circ\text{C}$ ($1/\theta_{JA}$)	3660	4270		mW
		With heatsink Derating factor above $T_A = 85^\circ\text{C}$: $104.1 \text{ mW}/^\circ\text{C}$ ($1/\theta_{JA}$)	6250	7290		mW

Note 1 Obtained from package thermal simulations, JEDEC 2S2P four-layer board (114.3 mm x 101.6 mm x 1.6 mm), 70 μm (2 oz) copper thickness power planes, 35 μm (1 oz) copper thickness signal layer traces, natural convection (still air)

Note 2 As per [Note 1](#) with addition of aluminium heatsink, 114.3 mm x 101.6 mm x 1.0 mm representing the lid of a case.

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

4.4.1 Power Derating Curves

Figure 3: Power Derating Curve

Table 7: Typical Temperatures

	$T_A = 85\text{ °C}$	$T_A = 105\text{ °C}$	$T_A = 125\text{ °C}$
T_{J_WARN}	$P_D = 2.74\text{ W}$	$P_D = 1.52\text{ W}$	$P_D = 0.30\text{ W}$

4.5 Buck1 Characteristics

Unless otherwise noted, the following is valid for $T_J = -40\text{ °C}$ to $+150\text{ °C}$, $V_{SYS} = 2.8\text{ V}$ to 5.5 V .

Note: Values are preliminary, pending final silicon characterization results.

Table 8: Quad-Phase Buck Electrical Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Unit
External Electrical Conditions						
V_{IN}	Input voltage	$V_{IN} = V_{SYS} = V_{AVDD}$	2.8		5.5	V
C_{OUT}	Total output capacitance, including voltage and temperature coefficient	Typ 10 x 22 μF -40 % to +20 %	132	220	264	μF
ESR_{COUT}	Output capacitor series resistance, per capacitor	$f > 100\text{ kHz}$		3		$\text{m}\Omega$
L	Inductor value, per phase, including current and temperature dependence		88	110	132	nH
DCR_L	Inductor DC resistance			2		$\text{m}\Omega$

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

Parameter	Description	Conditions	Min	Typ	Max	Unit
Electrical Performance						
V _{OUT}	Output voltage, configurable in 10 mV steps	I _{OUT} = 0 mA to I _{OUT_MAX_PK} V _{IN} = 2.8 V to 5.5 V	0.5	0.85	1.3	V
V _{OUT_ACC}	Output voltage accuracy, including static line and load regulation	V _{OUT} ≥ 1 V	-1		1	%
V _{OUT_ACC}	Output voltage accuracy, including static line and load regulation	V _{OUT} < 1 V	-10		10	mV
I _{OUT_MAX_CONT}	Maximum continuous output current	With suitable thermal design	25			A
I _{OUT_MAX_PK}	Maximum peak output current	With suitable thermal design	40			A
I _{LIM}	Current limit, configureable per phase Note 1 Note 2			14.5		A
I _{LIM_ACC}	Current limit accuracy Note 2		-20		20	%
V _{THR_PG_HYS}	Power-good voltage threshold hysteresis	V _{OUT} = V _{THR_PG_DWN}	70	80	90	mV
V _{THR_PG_DWN}	Power-good voltage threshold for falling	V _{OUT} = V _{BUCK}	-170	-140	-110	mV
V _{THR_HV}	High V _{OUT} voltage threshold	V _{OUT} = V _{BUCK}	130	160	195	mV
V _{OUT_TR_LINE}	Line transient response	V _{IN} = 3.0 V to 3.6 V V _{OUT} = 1.1 V I _{OUT} = 0.5 * I _{OUT_MAX_PK} dt = 10 μs		10		mV
f _{sw}	Switching frequency			4		MHz
t _{ON_MIN}	Minimum turn-on pulse 0 % duty is also supported			10		ns
t _{BUCK_EN}	Turn-on time	CH1_EN = high V _{IN} = 3.3 V V _{OUT} = 0.85 V DVC slew rate: 10 mV/8 μs No load Recommended capacitance		600		μs

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

Parameter	Description	Conditions	Min	Typ	Max	Unit
R _{PD}	Output pull-down resistance for each phase at the LX node, see CH1_PD_DIS	V _{IN} = 3.3 V V _{OUT} = 0.5 V	140	150	160	Ω
R _{ON_P MOS}	On resistance of switching PMOS, per phase	V _{IN} = 3.3 V		12		mΩ
R _{ON_N MOS}	On resistance of switching NMOS, per phase	V _{IN} = 3.3 V		6		mΩ
PWM Mode						
η _{PWM}	Efficiency, PWM	V _{IN} = 3.3 V V _{OUT} = 1.1 V I _{OUT} = 5 % (I _{OUT_MAX_PK}) to 80 % (I _{OUT_MAX_PK})		80		%
AUTO Mode						
V _{OUT_TR_LD_RISE}	Load transient response, phase shedding enabled	V _{OUT} = 1.1 V I _{OUT} = 25 % to 75 % of I _{OUT_MAX_PK} Load rise time = 1 μs	-5			%
V _{OUT_TR_LD_FALL}	Load transient response, phase shedding enabled	V _{OUT} = 1.1 V I _{OUT} = 75 % to 25 % of I _{OUT_MAX_PK} Load fall time = 1 μs			5	%
PFM Mode						
I _{Q_PFM_1PH}	Quiescent current in PFM	V _{IN} = 3.3 V No load No switching		120		μA
η _{PFM}	Efficiency, PFM	V _{IN} = 3.3 V V _{OUT} = 1.1 V I _{OUT} = 100 mA		80		%

Note 1 For applications requiring V_{OUT} < 0.75 V contact Renesas applications support for configuration setting

Note 2 t_{ON} > 40 ns

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

4.6 Performance and Supervision Characteristics

Note: Values are preliminary, pending final silicon characterization results.

Table 9: Performance and Supervision Electrical Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Unit
Electrical Performance						
V _{THR_POR}	Power-on-reset threshold	Threshold for AVDD falling		2.1	2.25	V
V _{THR_POR_HYS}	Power-on-reset hysteresis			200		mV
T _{WARN}	Temperature warning threshold		120	130	140	°C
T _{CRIT}	Temperature shutdown threshold		145	155	165	°C
I _{IN_OFF}	Supply current	OFF state T _A = 27 °C IC_EN = 0		0.1	1	μA
I _{IN_ON}	Supply current	ON state T _A = 27 °C IC_EN = 1 Buck off	5	10	20	μA

4.7 Digital IO Characteristics

Note: Values are preliminary, pending final silicon characterization results.

Table 10: Digital I/O Electrical Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Unit
Electrical Performance						
V _{IH_EN}	Input high voltage, IC enable		1.2		AVDD	V
V _{IL_EN}	Input low voltage, IC enable				0.4	V
t _{IC_EN}	IC enable time				1000	μs
V _{IH_GPIO_SCL_SDA}	Input high voltage GPIO, SCL, SDA		1.2		AVDD	V
V _{IL_GPIO_SCL_SDA}	Input low voltage GPIO, SCL, SDA				0.4	V
V _{OH_GPIO}	Output high voltage GPIO	Push-pull mode I _{OUT} = 1 mA	0.8*AV DD		AVDD	V
V _{OL_GPIO}	Output low voltage GPIO	Push-pull mode I _{OUT} = 1 mA			0.2*AV DD	V

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

Parameter	Description	Conditions	Min	Typ	Max	Unit
V _{OL_SDA}	Output low voltage SDA	I _{OUT} = 3 mA		0.24		V
R _{PD}	GPIO pull-down resistor		2	10	120	kΩ
R _{PU}	GPIO pull-up resistor		2	10	120	kΩ

4.8 Timing Characteristics

Note: Values are preliminary, pending final silicon characterization results.

Table 11: I2C Electrical Characteristics

Parameter	Description	Conditions	Min	Typ	Max	Unit
Electrical Performance						
t _{BUS}	Bus free time between a STOP and START condition		0.5			μs
C _{BUS}	Bus line capacitive load				150	pF
f _{SCL}	SCL clock frequency		20 Note 1		1000	kHz
t _{LO_SCL}	SCL low time		0.5			μs
t _{HI_SCL}	SCL high time		0.26			μs
t _{RISE}	SCL and SDA rise time	Requirement for input			1000	ns
t _{FALL}	SCL and SDA fall time	Requirement for input			300	ns
t _{SETUP_START}	Start condition setup time		0.26			μs
t _{HOLD_START}	Start condition hold time		0.26			μs
t _{SETUP_STOP}	Stop condition setup time		0.26			μs
t _{DATA}	Data valid time				0.45	μs
t _{DATA_ACK}	Data valid acknowledge time				0.45	μs
t _{SETUP_DATA}	Data setup time		50			ns
t _{HOLD_DATA}	Data hold time		0			ns

Note 1 Minimum clock frequency is limited to 20 kHz if I2C_TIMEOUT is enabled

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

4.9 Typical Performance

The static efficiency measurement plots depicted in Figure 4 and Figure 5 were performed at 25°C in a temperature-controlled environment. A continuous load was used for the measurements therefore the peak current limit of 40A was not reached.

Figure 4: DA9141-A Efficiency, PWM Mode without Phase Shedding

Figure 5: DA9141-A Efficiency, Auto Mode with Phase Shedding

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

5 Functional Description

5.1 Operating Modes

5.1.1 ON

DA9141-A is ON when the IC_EN pin is higher than V_{IH_EN} and the supply voltage is higher than V_{THR_POR} . Once enabled, the host processor can start communicating with DA9141-A using the control interface, after the t_{IC_EN} delay.

5.1.2 OFF

DA9141-A is OFF when the IC_EN pin is lower than V_{IL_EN} . In OFF, the buck is always disabled and the LX nodes are pulled down by a (typically 150 Ω) internal pull-down resistor.

5.2 DC-DC Buck Converter

DA9141-A operates as a single-channel, quad-phase buck converter which delivers up to 40 A output current at a 0.5 V to 1.3 V output voltage range.

The buck converter has two configurable output voltage settings. One is the normal output voltage (A), the other offers an alternative retention voltage (B). The bits used to configure the outputs are CH1_A_VOUT and CH1_B_VOUT. In this way, different application power modes are supported. The target output voltage (either A or B) is toggled by either GPI or I²C control interface, providing maximum flexibility for the application's host processor.

When the buck is enabled, its output voltage is monitored and a power-good signal indicates that the buck output voltage has reached a level higher than the power-good rise threshold. The power-good status is lost when the voltage drops below $V_{THR_PG_DWN}$ or increases above V_{THR_HV} . $V_{THR_PG_HYS}$ is the value that defines the hysteresis between a power-good rise and $V_{THR_PG_DWN}$. The status of the power-good indicator is read back via I²C from the PG1 status bit. Alternatively, it can be assigned to any of the GPIOs by setting the GPIO<x>_MODE bits to PG1 output.

The buck converter is capable of supporting DVC transitions that occur when:

- the active and selected A- or B-voltage is updated to a new target value, using bits CH1_A_VOUT and CH1_B_VOUT
- the voltage selection is toggled from the A- to B-voltage (or B- to A-voltage), using bit CH1_VSEL or via GPI control

The DVC operates in pulse-width-modulation (PWM) mode with synchronous rectification. The slew rate of the DVC ramp up and ramp down transitions is programmed at 10 mV per (8, 4, 2, 1, or 0.5) μ s in register bits CH1_SR_DVC_DWN and CH1_SR_DVC_UP.

A pull-down resistor (typically 150 Ω) for each phase is always activated when the buck is disabled, unless it is disabled by setting register bits CH1_PD_DIS to 0x1.

5.2.1 Switching Frequency

The buck switching frequency is tuned using register bit OSC_TUNE. The internal 8 MHz oscillator frequency is tuned in ± 160 kHz steps. This impacts the buck converter frequency in steps of 80 kHz and helps to mitigate possible disturbances to other high frequency systems in the application.

5.2.2 Operation Modes and Phase Selection

The buck converter operates in PWM or PFM modes. The operating mode is selected using register bits CH1_A_MODE and CH1_B_MODE.

Phase shedding automatically changes between 1- and 4-phase operation at a typical current of 4 A.

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

If the automatic operation mode (Auto mode) is selected, the buck converter automatically changes between synchronous PWM mode and PFM mode depending on the load current. This improves the efficiency across the range of output load currents.

5.2.3 Output Voltage Selection

The switching converter is configured using the I²C interface.

Two output voltages (Value A and Value B in Figure 6) are pre-configured in registers CH1_A_VOUT and CH1_B_VOUT. The output voltage (VBUCK in Figure 6) is selected by toggling register bit CH1_VSEL, by re-programming the selected voltage control register, or by toggling a GPI if configured to do so. Any of these options will result in ramped voltage transitions.

After being enabled, the buck converter uses, by default, the register settings in CH1_A_VOUT (Value A) unless the output voltage selection is configured via the GPI port to be CH1_B_VOUT.

Register bits CH1_VMAX limit the output voltage that can be set.

Figure 6: Buck Output Voltage Control Concept

5.2.4 Soft Startup and Shutdown

To limit in-rush current from V_{SY}, the buck converter performs a soft-start after being enabled. The startup behavior is a compromise between acceptable inrush current from the battery and turn-on time. Ramp times are configured in register CH1_SR_STARTUP. **Note:** rates higher than 5 mV/μs may produce overshoot during the startup phase.

A ramped power down is selected in register bits CH1_SR_SHDN. When no ramp is selected (immediate power down), the output node is discharged only by the pull-down resistor, if enabled, in register CH1_PD_DIS.

5.2.5 Current Limit

The integrated current limit protects the power stages and external coil from excessive current. It should be configured to at least 40 % higher than the required maximum per phase output current. **Note:** this value is loaded from the OTP.

When the current limit is reached, the buck converter generates an event and an interrupt to the host processor unless the interrupt has been masked using bit M_OC1 in SYS_MASK_1. Register bit OC_DVC_MASK masks over-current events during DVC transitions.

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

5.2.6 Temperature Protection

DA9141-A is protected from internal overheating by temperature-triggered shutdown.

There are two kinds of flags concerning temperature protection: temperature warning and temperature critical. The warning flag asserts when $T_J > T_{WARN}$ and the critical flag asserts when $T_J > T_{CRIT}$. When the critical flag asserts, Buck1 shuts down immediately.

Table 12: Temperature Protection Control Registers

Category	Register name	Description
Status	TEMP_WARN	Asserts when the temperature warning threshold is reached
	TEMP_CRIT	Asserts when the temperature shutdown threshold is reached
IRQ event	E_TEMP_WARN	TEMP_WARN caused event
	E_TEMP_CRIT	TEMP_CRIT caused event
IRQ mask	M_TEMP_WARN	TEMP_WARN event IRQ mask
	M_TEMP_CRIT	TEMP_CRIT event IRQ mask
	M_VR_HOT	TEMP_WARN status IRQ mask

Figure 7: Temperature Protection Operation

5.3 Control Circuits

5.3.1 Chip Enable and Disable

The IC_EN pin enables and disables the IC. When IC_EN = 0 all blocks, except for low I_Q POR, powerdown and the buck output is pulled down.

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

5.3.2 GPIO

5.3.2.1 GPIO Pin Assignment

The DA9141-A provides up to five GPIO pins, three if the I²C is enabled, see [Table 13](#). The registers that configure the GPIO pin assignments are OTP programmable.

GPIO0 can be programmed (OTP option) to function as chip configuration (CONF), see [Section 5.3.2.3](#). When the I²C interface is enabled (OTP option) any register settings for GPIO3 and GPIO4 are ignored and GPIO3 and GPIO4 function as SCL and SDA respectively.

Table 13: GPIO Pin Assignment

OTP Option		GPIO Pin					Available GPIOs
I2C	CONF	CONF/ GPIO0	GPIO1	GPIO2	SCL/ GPIO3	SDA/ GPIO4	
Disabled	Disabled	GPIO0	GPIO1	GPIO2	GPIO3	GPIO4	5
	Enabled	CONF	GPIO1	GPIO2	GPIO3	GPIO4	4
Enabled	Disabled	GPIO0	GPIO1	GPIO2	SCL	SDA	3
	Enabled	CONF	GPIO1	GPIO2	SCL	SDA	2

5.3.2.2 GPIO Function

The GPIO pins are configurable as the following functions in register GPIO<x>_MODE (x = 0 to 4):

- Buck1 enable input (EN1)
- Buck1 DVC control input (DVC1)
- Buck1 OTP setting reload input (RELOAD)
- Buck1 power-good output (PG1)
- Interrupt output (nIRQ)

5.3.2.3 Chip Configuration Select

GPIO0 functions as chip configuration select (CONF) input when enabled as an OTP setting.

Three different chip configurations can be selected according to the CONF pin level (high, low, or Hi-Z).

Table 14: GPIO0 Configurable Registers when CONF Enabled

Register Name	Description
IF_SLAVE_ADDR[6:0]	I2C slave address
CH1_A_MODE[1:0]	CH1_A Operation mode select
CH1_B_MODE[1:0]	CH1_B Operation mode select
CH1_VSEL	CH1 output voltage and operation selection
CH1_EN	CH1 enable
CH1_A_VOUT[7:0]	CH1 output voltage setting A
CH1_B_VOUT[7:0]	CH1 output voltage setting B
M_PG1_STAT	IRQ mask setting for CH1 power-good status
M_VR_HOT	IRQ mask setting for temp warning status
GPIO1_MODE[3:0]	GPIO1 mode setting
GPIO2_MODE[3:0]	GPIO2 mode setting

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

Register Name	Description
GPIO1_OBUF	GPIO1 output buffer select
GPIO2_OBUF	GPIO2 output buffer select
GPIO1_TRIG[1:0]	GPIO1 input trigger select
GPIO1_POL	GPIO1 polarity select
GPIO1_PUPD	GPIO1 pull-up/pull-down enable
GPIO1_DEB[1:0]	GPIO1 input debounce time setting
GPIO1_DEB_RISE	GPIO1 input debounce rising edge enable
GPIO1_DEB_FALL	GPIO1 input debounce falling edge enable
GPIO2_TRIG[1:0]	GPIO2 input trigger select
GPIO2_POL	GPIO2 polarity select
GPIO2_PUPD	GPIO2 pull-up/pull-down enable
GPIO2_DEB[1:0]	GPIO2 input debounce time setting
GPIO2_DEB_RISE	GPIO2 input debounce rising edge enable
GPIO2_DEB_FALL	GPIO2 input debounce falling edge enable

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

5.3.3 Interrupt

When an event is triggered, the nIRQ interrupt flag is asserted. Trigger conditions and control registers for each interrupt event are listed in [Table 15](#).

Some of these events are categorized as fault events and affect device operation (for example, buck disable), see [Section 5.2.6](#).

Table 15: Interrupt List

Name	Polarity (Note 1)	Trigger	IRQ Status Register	IRQ Mask Register	Deglintch Period
Temperature warning (event)	N	T _J rising above T _{WARN}	E_TEMP_WARN	M_TEMP_WARN	0 s
Temperature critical (event)	N	T _J rising above T _{CRIT}	E_TEMP_CRIT	M_TEMP_CRIT	0 s
Buck1 power-good (event)	P	Buck1 V _{OUT} is in power-good voltage range (not under- or over-voltage)	E_PG1	M_PG1	0 s
Buck1 over-voltage (event)	N	Buck1 V _{OUT} rising above over-voltage threshold (target voltage + 150 mV)	E_OV1	M_OV1	Rise: 8 μs Fall: 8 μs
Buck1 under-voltage (event)	N	Buck1 V _{OUT} falling below under-voltage threshold (target voltage - V _{TH_PG_FALL})	E_UV1	M_UV1	0 s
Buck1 over-current (event)	N	Buck1 current rising above over-current threshold	E_OC1	M_OC1	0 s
Buck1 power-good (status) (Note 2)	P	Buck1 V _{OUT} is in power-good voltage range (not under- or over-voltage)	PG1	M_PG1_STAT (Note 3)	0 s
Temperature warning (status) (Note 2)	N	T _J rising above T _{WARN}	TEMP_WARN	M_VR_HOT (Note 3)	0 s
GPIO0 change (event)	N	Detect GPIO0 change for active trigger selected by GPIO0_TRIG register	E_GPIO0	M_GPIO0	100 μs, 1 ms, or 10 ms 100 ms
GPIO1 change (event)	N	Detect GPIO1 change for active trigger selected by GPIO1_TRIG register	E_GPIO1	M_GPIO1	
GPIO2 change (event)	N	Detect GPIO2 change for active trigger selected by GPIO2_TRIG register	E_GPIO2	M_GPIO2	

Note 1 Polarity at the source of the flag: P = active high, N = active low.
General rule is: normal system state is high, and abnormal system state is low (for example, PG = high means power-good, TEMP_CRIT = low when in temperature critical state).

Note 2 Interrupt outputs the status as is. I²C write is not required for interrupt clear.

Note 3 OTP load value defined by CONF pin setting (if CONF pin enabled).

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

Table 16: Interrupt Registers Except for Power-Good Status

Register	Description
E_<name>	Read-only interrupt event register 0: No interrupt 1: Interrupt occurred Cleared after being written to I²C. Set until IRQ is removed.
M_<name>	Interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. Event register (E_<name>) is updated.

Table 17: Interrupt Registers for Power-Good and Temperature Warning Status

Register	Description
PG1	Buck1 power-good status. Asserted as long as Buck1 output voltage is in range (under-voltage threshold < buck output voltage < over-voltage threshold) 0: Not power-good 1: Power-good
M_PG1_STAT	Power-good status interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. Power-good status register (PG1) is updated
TEMP_WARN	Asserted as long as the temperature warning threshold (T _{WARN}) is reached 0: Junction temperature is below T _{WARN} 1: Junction temperature is above T _{WARN}
M_VR_HOT	Temperature warning status (TEMP_WARN) interrupt mask register 0: Not masked 1: Masked. No IRQ signal sent. Temperature warning status register (TEMP_WARN) is updated

Figure 8: Interrupt Operation Example

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

5.4 I²C Communication

All features of DA9141-A can be controlled with the I²C interface, which is enabled or disabled as an OTP setting.

I ² C	Description
Disabled	SCL/GPIO3 and SDA/GPIO4 pins can be used as GPIO
Enabled	SCL/GPIO3 and SDA/GPIO4 pins are used as I ² C clock input and I ² C data input/output.

GPIO3 functions as the I²C clock (SCL) and GPIO4 carries all the power manager bidirectional I²C data (SDA). The I²C interface is open drain supporting multiple devices on a single line. The bus lines have to be pulled high by external pull-up resistors (2 kΩ to 20 kΩ). The standard frequency of the I²C bus is 1 MHz in fast-mode plus (FM+), 400 kHz in fast-mode, or 100 kHz in standard mode.

5.4.1 I²C Protocol

All data is transmitted across the I²C bus in eight-bit groups. To send a bit, the SDA line is driven towards the intended state while the SCL is low (a low SDA indicates a zero bit). Once the SDA has settled, the SCL line is brought high and then low. This pulse on SCL clocks the SDA bit into the receiver's shift register.

A two-byte serial protocol is used containing one byte for address and one byte for data. Data and address transfer are transmitted MSB first for both read and write operations. All transmissions begin with the START condition from the master while the bus is in idle state (the bus is free). It is initiated by a high to low transition on the SDA line while the SCL is in the high state (a STOP condition is indicated by a low to high transition on the SDA line while the SCL is in the high state).

Figure 9: I²C START and STOP Condition Timing

The I²C bus is monitored for a valid slave address whenever the interface is enabled. It responds immediately when it receives its own slave address. The acknowledge is done by pulling the SDA line low during the following clock cycle (white blocks marked with A in Figure 10 and Figure 11).

The protocol for a register write from master to slave consists of a START condition, a slave address with read/write bit, and the eight-bit register address followed by eight bits of data, terminated by a STOP condition. DA9141-A responds to all bytes with acknowledge (A), see Figure 10.

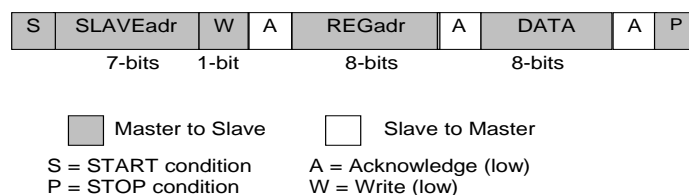

Figure 10: I²C Byte Write (SDA Line)

7 Package Information

7.1 Package Outlines

Figure 12: Package Outline Drawing

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

7.2 Moisture Sensitivity Level

The Moisture Sensitivity Level (MSL) is an indicator for the maximum allowable time period (floor lifetime) in which a moisture sensitive plastic device, once removed from the dry bag, can be exposed to an environment with a specified maximum temperature and a maximum relative humidity before the solder reflow process. The MSL classification is defined in [Table 54](#).

For detailed information on MSL levels refer to the IPC/JEDEC standard J-STD-020, which can be downloaded from <http://www.jedec.org>.

The DA9141-A package is qualified for MSL 3.

Table 54: MSL Classification

MSL Level	Floor Lifetime	Conditions
MSL 4	72 hours	30 °C / 60 % RH
MSL 3	168 hours	30 °C / 60 % RH
MSL 2A	4 weeks	30 °C / 60 % RH
MSL 2	1 year	30 °C / 60 % RH
MSL 1	Unlimited	30 °C / 85 % RH

7.3 Soldering Information

Refer to the IPC/JEDEC standard J-STD-020 for relevant soldering information. This document can be downloaded from <http://www.jedec.org>.

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

8 Ordering Information

The ordering number consists of the part number followed by a suffix indicating the packing method. For details and availability, please consult your [Renesas local sales representative](#).

Table 55: Ordering Information for Consumer / Industrial Applications

Part Number	Package	Size (mm)	Shipment Form	Pack Quantity
DA9141-xxF71	60 FCBGA	4.5 x 7 x 1.01 0.65 mm pitch	Tray	364
DA9141-xxF72	60 FCBGA	4.5 x 7 x 1.01 0.65 mm pitch	Reel	2600

Table 56: Ordering Information for Automotive Applications

Part Number	Package	Size (mm)	Shipment Form	Pack Quantity
DA9141-xxF71-A	60 FCBGA	4.5 x 7 x 1.01 0.65 mm pitch	Tray	364
DA9141-xxF72-A	60 FCBGA	4.5 x 7 x 1.01 0.65 mm pitch	Reel	2600

High-Performance, 25 A/40 A Peak, DC-DC Converter for Automotive Applications

9 Application Information

The following recommended components are examples selected from requirements of a typical application.

9.1 Capacitor Selection

Ceramic capacitors are used as bypass capacitors at all VDD and output rails. When selecting a capacitor, especially for types with high capacitance at smallest physical dimension, the DC bias characteristic has to be taken into account.

Table 57: Recommended Automotive Grade Capacitor Types

Application	Value (μF)	Size	Temp. Char.	Tol. (%)	V-Rate (V)	Type
VOUT output bypass	22	1206	X7R ±15%	±20	6.3	Murata GCM31CR70J226ME23L
PVDDx bypass	10	0805	X7R ±15%	±10	16	Murata GCM21BC71C106KE36L
PVDDx bypass for VSYS < 4V	10	0603	X7R ±15%	±10	6.3	Murata GCM188D70J106ME36L
AVDD bypass	1	0805	X7R ±15%	±10	50	Murata GCM21BR71H105KA03L

9.2 Inductor Selection

Inductors should be selected based on the following parameters:

- Rated maximum current and ISAT
ISAT specifies the maximum current at which the inductance drops by 30 % of the nominal value, and IMAX is defined by the maximum power dissipation and is applied to the effective current at 40°C temperature rise.
- DC resistance
Critical for the converter efficiency and should therefore be minimized.

Table 58: Recommended Inductor Types

Value (nH)	Size (mm)	IMAX (DC) (A)	ISAT (A)	Tol. (%)	DC Resistance (mΩ)	Type
112	3.2 x 2.5 x 2.5	20	31	20	1.9	TDK CLT3225AR11MI3
110	4.0 x 4.0 x 2.1	29	29	20	1.4	Coilcraft XGL4020-111MEC
100	5.3 x 5.1 x 3.0	18.3	37.1	20	2.7	TDK SPM5030VT-R10M-D

Status Definitions

Revision	Datasheet Status	Product Status	Definition
1.<n>	Target	Development	This datasheet contains the design specifications for product development. Specifications may be changed in any manner without notice.
2.<n>	Preliminary	Qualification	This datasheet contains the specifications and preliminary characterization data for products in pre-production. Specifications may be changed at any time without notice in order to improve the design.
3.<n>	Final	Production	This datasheet contains the final specifications for products in volume production. The specifications may be changed at any time in order to improve the design, manufacturing and supply. Major specification changes are communicated via Customer Product Notifications. Datasheet changes are communicated via www.dialog-semiconductor.com .
4.<n>	Obsolete	Archived	This datasheet contains the specifications for discontinued products. The information is provided for reference only.

RoHS Compliance

Dialog Semiconductor's suppliers certify that its products are in compliance with the requirements of Directive 2011/65/EU of the European Parliament on the restriction of the use of certain hazardous substances in electrical and electronic equipment. RoHS certificates from our suppliers are available on request.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
