

Description

M3xxx316 is a magneto-resistive random-access memory (MRAM). It is offered in density ranging from 4Mbit to 32Mbit. MRAM technology is analogous to Flash technology with SRAM compatible 35ns/35ns and 45ns/45ns read/write timings (Persistent SRAM, P-SRAM). Data is always non-volatile. This makes MRAM a very reliable and fast non-volatile memory solution.

MRAM is a true random-access memory; allowing both reads and writes to occur randomly in memory. MRAM is ideal for applications that must store and retrieve data without incurring large latency penalties. It offers low latency, low power, virtually unlimited endurance and data retention, high performance and scalable memory technology.

M3xxx316 is offered with industrial (-40°C to 85°C) and industrial plus (-40°C to 105°C) operating temperature ranges.

Typical Applications

- Ideal for applications that must store and retrieve data without incurring large latency penalties
- Factory Automation
- Multifunction Printers
- Industrial Control And Monitoring
- Medical Diagnostics
- Data Switches And Routers
- Smart Meter

Features

- Interface
 - Parallel Asynchronous x16
- Technology
 - 40nm pMTJ STT-MRAM
- Data Retention (see Table 16. Endurance and Data Retention Density)
 - 4Mb, 8Mb, 16Mb, 32Mb
- Operating Voltage Range
 - VCC: 2.70V – 3.60V
- Operating Temperature Range
 - Industrial: -40°C to 85°C
 - Industrial Plus: -40°C to 105°C
- RoHS Compliant & REACH Compliant
- Packages
 - 44-pin TSOP (10mm x 18mm)
 - 54-pin TSOP (10mm x 22mm)
 - 48-ball FBGA (10mm x 10mm)
- Memory Array Organization
 - 4Mbit
 - 262,144 x 16
 - 8Mbit
 - 524,288 x 16
 - 16Mbit
 - 1,048,576 x 16
 - 32Mbit
 - 2,097,152 x 16

General Description

M3xxx316 is a magneto-resistive random-access memory (MRAM). It is offered in density ranging from 4Mbit to 32Mbit. MRAM technology is analogous to Flash technology with SRAM compatible 35ns/35ns and 45ns/45ns read/write timings (Persistent SRAM, P-SRAM). Data is always non-volatile. This makes MRAM a very reliable and fast non-volatile memory solution.

Table 1: Technology Comparison

	SRAM	Flash	EEPROM	MRAM
Non-Volatility	-	√	√	√
Write Performance	√	-	-	√
Read Performance	√	-	-	√
Endurance	√	-	-	√
Power	-	-	-	√

MRAM is a true random-access memory; allowing both reads and writes to occur randomly in memory. MRAM is ideal for applications that must store and retrieve data without incurring large latency penalties. It offers low latency, low power, infinite endurance, high performance and scalable memory technology.

M3xxx316 is available in small footprint 54-pin TSOP (10mm x 22mm) and 48-Ball FBGA (10mm x 10mm) packages supporting densities ranging from 4Mb to 16Mb. The 48-Ball FBGA also supports the 32Mb. Density of 4Mb is also available in a small footprint 44-pin TSOP (10mm x 18mm). These packages are compatible with similar low-power volatile and non-volatile products.

M3xxx316 is offered with industrial (-40°C to 85°C) and industrial plus (-40°C to 105°C) operating temperature ranges.

Ordering Options

The ordering part numbers are formed by a valid combination of the following options:

Signal Description and Assignment

Figure 2: Device Pinout

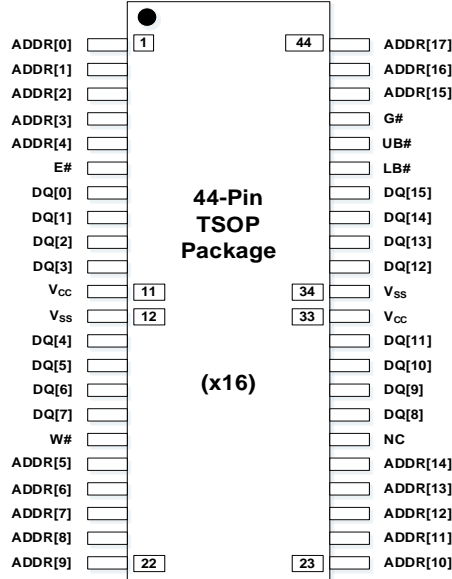

Table 3: Signal Description

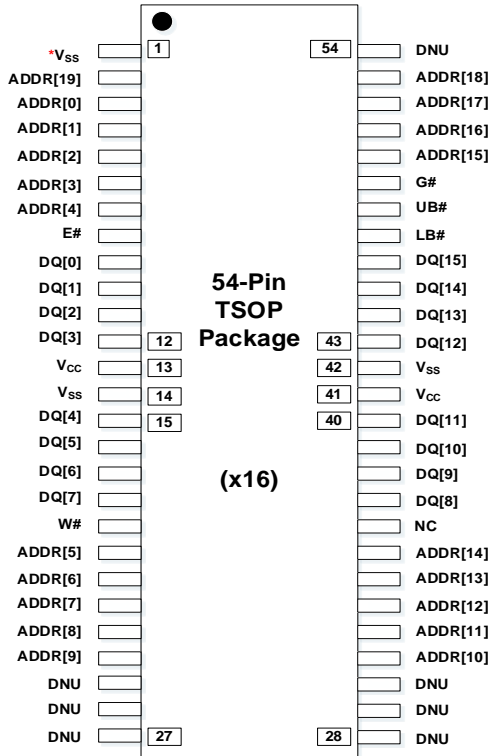

Signal	Type	Description
E#	Input	Chip enable: Enables or disables the MRAM.
G#	Input	Output enable: Enables the output drivers in bidirectional data transfer I/Os.
W#	Input	Write enable: Transfers serial data from the host system to the MRAM when Low (Logic '0'). Transfers serial data from the MRAM to the host system when High (Logic '1').
UB#	Input	Upper Byte Enable: Enables or disables DQ[15:8].
LB#	Input	Lower Byte Enable: Enables or disables DQ[7:0].
ADDR[20:0]	Input	Address: I/Os for address transfer. 04M: ADDR[17:0] – 18 Address pins for 04M devices. 08M: ADDR[18:0] – 19 Address pins for 08M devices. 16M: ADDR[19:0] – 20 Address pins for 16M devices. 32M: ADDR[20:0] – 21 Address pins for 32M devices.
DQ[15:0]	Input / Output	Data inputs/outputs: The bidirectional I/Os transfer data.
V_{cc}	Supply	V_{cc}: Core and I/O power supply.
V_{ss}	Supply	V_{ss}: Core and I/O ground supply.
NC		No connect: NCs are not internally connected. They can be driven or left unconnected.
DNU		Do not use: DNUs must be left unconnected.

Architecture

M3xxx316 is a high performance MRAM device. Writing to and reading from the device as follows:

To write to the device, bring Chip Enable (E#) and Write Enable (W#) inputs Low (Logic '0'). This enables data on I/O pins (DQ[0] to DQ[15]) to be written into the memory location specified by the address pins ADDR[0] through ADDR[20] (48-ball FBGA), ADDR[0] through ADDR[19] (54-pin TSOP) and ADDR[0] through ADDR[17] (44-pin TSOP).

To read from the device, bring Chip Enable (E#) input Low (Logic '0'), Output Enable (G#) input Low (Logic '0') while maintaining Write Enable (W#) High (Logic '1'). This enables data from the memory location specified by the address pins ADDR[0] through ADDR[20] (48-ball FBGA), ADDR[0] through ADDR[19] (54-pin TSOP) and ADDR[0] through ADDR[17] (44-pin TSOP) to appear on I/O pins (DQ[0] to DQ[15]).

X: Don't Care

Hi-Z: High Impedance

Device Initialization

When powering up, the following procedure is required to initialize the device correctly:

- E#, W#, G#, must follow V_{CC} during power-up

Figure 4: Power-Up Behavior

When powering down, the following procedure is required to turn off the device correctly:

- E#, W#, G#, must follow V_{CC} during power-down
- During power loss or brownout, where V_{CC} goes below V_{wi} , read/write operations are prohibited. The power-up timing needs to be observed after V_{CC} goes above V_{CC} (minimum)

Figure 5: Power-Down Behavior

Table 5: Device Initialization Timing – 3.0V

Parameter	Symbol	Test Conditions	3.0V			Units
			Minimum	Typical	Maximum	
V_{CC} Range		All operating voltages and temperatures	2.7	-	3.6	V
