

### General Description

The SLG59M309V is a 7.8 mΩ 4 A single-channel load switch that is able to switch 1 V to 5 V power rails. The product is packaged in an ultra-small 1.5 x 2.0 mm package.

### Features

- 1.5 x 2.0 mm FC-TDFN 8L package (2 fused pins for drain and 2 fused pins for source)
- Logic level ON pin capable of supporting 0.85 V CMOS Logic
- User selectable ramp rate with external capacitor
- 7.8 mΩ RDS<sub>ON</sub> while supporting 4 A
- Two Over Current Protection Modes
  - Short Circuit Current Limit
  - Active Current Limit
- Over Temperature Protection
- Pb-Free / Halogen-Free / RoHS compliant
- Operating Temperature: -40 °C to 85°C
- Operating Voltage: 2.5 V to 5.5 V

### Pin Configuration

**8-pin FC-TDFN  
(Top View)**

### Applications

- Notebook Power Rail Switching
- Tablet Power Rail Switching
- Smartphone Power Rail Switching

### Block Diagram

## Pin Description

| Pin # | Pin Name | Type   | Pin Description  |
|-------|----------|--------|--|
| 1     | VDD      | PWR    | VDD power for load switch control (2.5 V to 5.5 V)   |
| 2     | ON       | Input  | Turns MOSFET ON (4 M $\Omega$ pull down resistor)<br>CMOS input with VIL < 0.3 V, VIH > 0.85 V |
| 3     | D        | MOSFET | Drain of Power MOSFET (fused with pin 4)   |
| 4     | D        | MOSFET | Drain of Power MOSFET (fused with pin 3)   |
| 5     | S        | MOSFET | Source of Power MOSFET (fused with pin 6)  |
| 6     | S        | MOSFET | Source of Power MOSFET (fused with pin 5)  |
| 7     | CAP      | Input  | Capacitor for controlling power rail ramp rate   |
| 8     | GND      | GND    | Ground   |

## Ordering Information

| Part Number  | Type                       | Production Flow             |
|--------------|----------------------------|-----------------------------|
| SLG59M309V   | FC-TDFN 8L                 | Industrial, -40 °C to 85 °C |
| SLG59M309VTR | FC-TDFN 8L (Tape and Reel) | Industrial, -40 °C to 85 °C |

## Absolute Maximum Ratings

| Parameter         | Description                       | Conditions                               | Min. | Typ. | Max. | Unit |
|-------------------|-----------------------------------|--|------|------|------|------|
| $V_{DD}$          | Power Supply                      |  | --   | --   | 7    | V    |
| $T_S$             | Storage Temperature               |  | -65  | --   | 150  | °C   |
| $ESD_{HBM}$       | ESD Protection                    | Human Body Model                         | 2000 | --   | --   | V    |
| $W_{DIS}$         | Package Power Dissipation         |  | --   | --   | 1    | W    |
| MOSFET $IDS_{PK}$ | Peak Current from Drain to Source | For no more than 1 ms with 1% duty cycle | --   | --   | 6    | A    |

Note: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

## Electrical Characteristics

$T_A = -40\text{ °C}$  to  $85\text{ °C}$  (unless otherwise stated)

| Parameter        | Description                          | Conditions   | Min.                      | Typ. | Max.     | Unit             |
|------------------|--------------------------------------|--|---------------------------|------|----------|------------------|
| $V_{DD}$         | Power Supply Voltage                 | $-40\text{ °C}$ to $85\text{ °C}$  | 2.5                       | --   | 5.5      | V                |

| $T_{OFF\_Delay}$ | OFF Delay Time                       | 50% ON to $V_S$ Fall, $V_{DD} = V_D = 5\text{ V}$  | --                        | 20   | 28       | $\mu\text{s}$    |

Notes:

1. Refer to table for configuration details.

## SLG59M309V Turn ON

The normal power on sequence is first  $V_{DD}$ , with  $V_D$  only being applied after  $V_{DD}$  is  $> 1$  V, and then ON after  $V_D$  is at least 90% of final value. The normal power off sequence is the power on sequence in reverse.

If  $V_{DD}$  and  $V_D$  are turned on at the same time then it is possible that a voltage glitch will appear on  $V_S$  before  $V_{DD}$  achieves 1 V which is the  $V_T$  of the main MOSFET. The size of the glitch is dependent on source and drain capacitance loading and the ramp rate of  $V_{DD}$  &  $V_D$ .

## SLG59M309V Turn ON

The  $V_S$  ramp follows a linear path, not an RC limitation provided the ramp is slow enough to not be current limited by load capacitance.

## SLG59M309V Current Limiting

The SLG59M309V has two forms of current limiting.

### Standard Current Limiting Mode

Current is measured by mirroring the current through the main MOSFET. The mirrored current is then sent through a resistor creating a voltage  $V(i)$  proportional to the MOSFET current. The  $V(i)$  is then compared with a Band Gap voltage  $V(BG)$ . If  $V(i)$  exceeds the Band Gap voltage then the voltage  $V(g)$  on the gate of the main MOSFET is reduced. The  $V(g)$  continues to drop until  $V(i) < V(BG)$ . This response is a closed loop response and is therefore very fast and current limits in less than a few micro-seconds. There is no difference between peak or constant current limit.

### Temperature Cutoff

However, as the  $V(g)$  drops the  $R_{ds}(ON)$  of the main MOSFET will increase, thus limiting the current, but also increasing the power dissipation of the IC. The IC is very small and cannot dissipate much power. Therefore, if a current limit condition is sustained the IC will heat up. If the temperature exceeds approximately 120°C, then  $V(g)$  will be brought low completely shutting off the main MOSFET. As the die cools the MOSFET will be turned back on at 100°C.

If the current limiting condition has not been mitigated then the die will again heat up to 120°C and the process will repeat.

### Short Circuit Current Limiting Mode

When  $V(S) < 250$  mV, which is the case if there is a solder bridge during the manufacturing process or a hard short on the power rail, then the current is limited to approximately 500 mA. This current limit is accomplished in the same manner as the Standard Current Limiting Mode with the exception that the current mirror is 15x greater. Because the current mirror is so much larger, a 15x smaller main MOSFET current is required to generate the same  $V(i)$ . If  $V(S)$  rises above approximately 250 mV, then this mode is automatically switched out.

**T<sub>Total\_ON</sub> vs. CAP @ V<sub>DD</sub> = 3.3 V**

SLG59M309V T<sub>Total\_ON</sub>: ON (50%) - V<sub>S</sub> (90%)  
 V<sub>DD</sub> = 3.3 V, T<sub>A</sub> = 25 °C, C<sub>L</sub> = 10 μF, I<sub>DS</sub> = 100 mA

**T<sub>Total\_ON</sub> vs. CAP @ V<sub>DD</sub> = 5.0 V**

SLG59M309V T<sub>Total\_ON</sub>: ON (50%) - V<sub>S</sub> (90%)  
 V<sub>DD</sub> = 5.0 V, T<sub>A</sub> = 25 °C, C<sub>L</sub> = 10 μF, I<sub>DS</sub> = 100 mA

**T<sub>SLEW</sub> vs. CAP @ V<sub>DD</sub> = 3.3 V**

SLG59M309V T<sub>SLEW</sub>: V<sub>S</sub> (10%) - V<sub>S</sub> (90%)  
 V<sub>DD</sub> = 3.3 V, T<sub>A</sub> = 25 °C, C<sub>L</sub> = 10 μF, I<sub>DS</sub> = 100 mA

**T<sub>SLEW</sub> vs. CAP @ V<sub>DD</sub> = 5.0 V**

SLG59M309V T<sub>SLEW</sub>: V<sub>S</sub> (10%) - V<sub>S</sub> (90%)  
 V<sub>DD</sub> = 5.0 V, T<sub>A</sub> = 25 °C, C<sub>L</sub> = 10 μF, I<sub>DS</sub> = 100 mA
