**Package Top Marking**

\* PP may consist of the special characters +, -, and = for a total of 9 different combinations, or may consist of two character alphanumeric Part Code (A-Z and 0-9), depending on time of marking.

Note: The SN Code (Line 1 and Line 2) is generated during production, and encodes information including part number, programming code number, date code and lot code. This same information is provided in plain text form on a label placed on the reel. If you need assistance in decoding the SN Code, please contact Dialog Semiconductor.

The IC security bit is locked/set for code security for production unless otherwise specified. The Programming Code Number is not changed based on the choice of locked vs. unlocked status.
