**List of changes :**

- Table 1 – Adding UTL as alternate assembly site, Wire material change from Gold to Copper and Standardize Moisture Sensitivity Level to MSL3.
- Table 2 - Adding UTL as alternate assembly site.

This notice is an update to PCN20029 (which was published on Nov 02,2020). Renesas Electronics America (REA) will begin to use UTL as alternate assembly of the listed Renesas DFN, QFN, TDFN, TQFN package products.

**Reason for Change:**

The assembly capacity worldwide is in highly competitive space. In order to secure the capacity ahead, Renesas has qualified the key package families to add alternate sources. These places will be utilized only if there is a shortfall in the supply. Adding UTL as alternate assembly site will expand current capabilities and capacities to optimize Renesas’s ability to meet customer’s delivery requirements. UTL facility is ISO9001:2015 and IATF 16949:2016 certified. UTL is existing assembly supplier for high volume assembly of QFN packaged products with both gold and copper bond wire material.

**Impact on fit, form, function, quality & reliability:**

The assembly qualification plan is designed using JEDEC and other applicable industry standards to confirm there is no impact to form, fit, function or interchangeability of the product. The remainder of the manufacturing operations (wafer fabrication, package level electrical test, etc) will continue to be processed to previously established manufacturing flow.

There might be a change to the Moisture Sensitivity Level (MSL) for products assembled with Copper bond wire. As such, the affected devices will be packed, labeled and shipped according to its MSL classification upon implementation of the changes outlined in the PCN.

**Product Identification:**

Product affected by this change is identifiable via Renesas’s internal traceability system. In addition, product assembled at UTL may also be identified by the assembly site code (country of assembly) when marked on the devices. The site code for product assembled at
