## The Install Manager Utility Revised to V.1.03.01

We have revised the Install Manager utility from V.1.03.00 to V.1.03.01. The Install Manager is a installation utility for Renesas tools. It offers a multi-install feature that permits you to build multiple High-performance Embedded Workshop environments in a single PC. For details of the utility, go to:

[http://www.renesas.com/ide/install\\_manager](http://www.renesas.com/ide/install_manager)

The above URL is one of our global sites.

---

### 1. Product and Versions to Be Updated

Install Manager V.1.00.00 through V.1.03.00

To check to see the version number of your Install Manager, open its Maintenance window, and then click the About Install Manager button. If the About Install Manager button does not appear, the version of your product is V.1.00.00.

### 2. Description of Revision

The following two problems have been fixed. These problems arise if all the High-performance Embedded Workshop environments on a PC have once been uninstalled, and then High-performance Embedded Workshop environments are installed without restarting the PC.

- (1) You cannot uninstall High-performance Embedded Workshop environments.
- (2) If two or more High-performance Embedded Workshop environments have been installed on a PC, the active environment cannot be switched to another.

### 3. How to Update Your Utility

To update yours, follow these steps:

- (1) Download the update program of the utility from:

[http://www.renesas.com/hew\\_download](http://www.renesas.com/hew_download)

This Web site will be opened from October 5.

The above URL is one of our global sites.

(2) Execute the executable file of the downloaded update program, and then follow the instructions that appear to update yours.

Even if two or more High-performance Embedded Workshops have been installed, you do not need to switch between them to update Install Manager. That is, updating once under one Windows environment updates Install Manager.

Install Manager V.1.03.01 is included in the compiler packages and the emulator software packages that High-performance Embedded Workshop V.4.07.00 or later manages.
