

DESCRIPTION

This document describes the specification for the F1325 **D**igital **P**re-**D**istortion Demodulator for PA linearization. This series of devices is offered in two frequency variants to cover common UTRA bands.

COMPETITIVE ADVANTAGE

In typical basestation transmitters digital pre-distortion is employed to improve the Transmitter performance. The signal out of the PA is sampled and the incoming Tx chain I&Q data is pre-distorted to counteract the distortion inherent in the PA. The coupled PA signal is adjusted via a digital step attenuator to the correct level and then sub-sampled at an IF frequency of ~200 MHz. This necessitates the need for a highly linear demodulator to downconvert to quadrature IF from the transmit frequency. By sampling IF_I and IF_Q independently and then digitally combining these signals, an effective doubling of the sample rate can be achieved. Any distortion in this path will degrade the performance of the DPD algorithm. By utilizing an ultra-linear demodulator w/integrated DSA such as the F1325, the ACLR and/or power consumption of the full Tx system can be improved significantly.

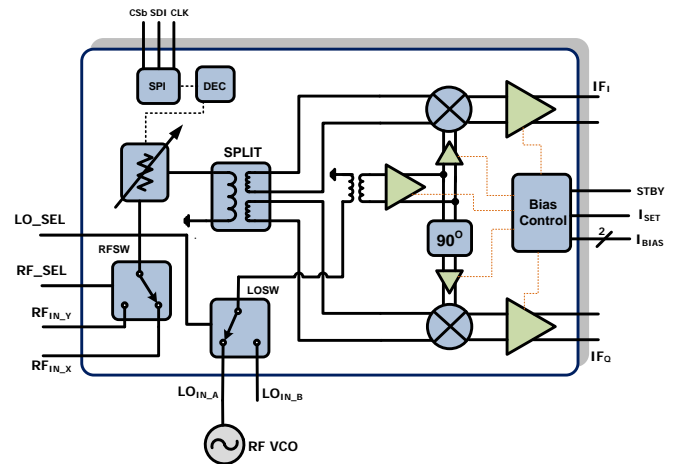

- ✓ Icc: DPD function Power Consumption ↓ **40%**
- ✓ Zero-Distortion™ Demod eliminates 2 IF amps
- ✓ Integrates 2 BPFs, 2 Baluns, 2 SP2Ts
- ✓ Glitch-Free™ ATTN control

FEATURES (I OR Q PATH)

- Wide flat performance IF BW
- Wide RF and LO BWs (~ 500 MHz)
- Ideal for Multi-Carrier Systems
- Drives ADC directly
- Ultra linear +40 dBm IP3O
- Low Noise Figure
- Excellent ACLR performance
- **100Ω** differential output impedance
- Fully integrated DPD demodulator
- 6 x 6 36-pin package
- Standby Mode w/Fast Recovery
- ICC: 262 mA

DEVICE BLOCK DIAGRAM

PART# MATRIX

Part#	RF range	UTRA bands	IF freq range	Typ. Gain	Injection
F1325	600 - 1150	5,6,8,12,13,14,17	20 - 350	8.5	High Side or Low Side
F1375	1300 - 2900	1,2,3,4,9,10,7,21, 24, 38	20 - 500	9	High Side or Low Side

ORDERING INFORMATION

ABSOLUTE MAXIMUM RATINGS

V _{CC} to GND	-0.3V to +5.5V
SW_Latch, DATA, CSb, CLK, RF_SEL	0V to 3.6V
LO_SEL, STBY	0V to V _{CC}
IF_I+, IF_I-, IF_Q+, IF_Q-	1V to (V _{CC} + 0.3V)
LO_INA, LO_INB	-0.3V to +0.3V
RFIN_X, RFIN_Y	-0.3V to +0.3V
IF_BiasI, IF_BiasQ to GND	-0.3V to +1.2V
LO_ADJ to GND	2.1V to 4.0V
RF Input Power (Into RFIN_X or RFIN_Y)	+27 dBm
Continuous Power Dissipation	2.5W
θ _{JA} (Junction – Ambient)	+40°C/W
θ _{JC} (Junction – Case) The Case is defined as the exposed paddle	+3°C/W
Operating Temperature Range (Case Temperature)	T _C = -40°C to +105°C
Maximum Junction Temperature	150°C
Storage Temperature Range	-65°C to +150°C
Moisture Sensitivity Level	1
Lead Temperature (soldering, 10s)	+260°C

Stresses above those listed above may cause permanent damage to the device. Functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

F1325 SPECIFICATION

Refer to Typical Application Circuit when operated with $V_{CC} = +5.0V$, $T_{CASE} = 25C$, $F_{RF} = 860\text{ MHz}$, $F_{LO} = 1060\text{ MHz}$, Gain = G_{MAX} , $P_{LO} = 0\text{ dBm}$, $T_C = +25^\circ C$, STBY = GND, unless otherwise noted. Full Lineup measured through to I or Q path. IF Transformers and RF trace losses de-embedded.

Parameter	Comment	Symbol	Min	Typ	Max	Units
Logic Input High	For STBY, DATA, CSb, CLK, SB_Latch	V_{IH}	1.1			V
Logic Input Low	For STBY, DATA, CSb, CLK, SB_Latch	V_{IL}			0.5	V
Logic Current	$V_H = 2.3V$, $V_L = 0V$	I_{IH}, I_{IL}	-115		+10	μA
Supply Voltage(s)	All V_{CC} (operating range)	V_{CC}		4.75 to 5.25		V
Temperature Range	Operating Range	T_{CASE}	-40		+105	$^\circ C$
Supply Current	Total V_{CC}	I_{SUPP}		262	300¹	mA
Supply Current	Standby Mode: STBY > V_{IH}	I_{STBY}		23	30	mA
RF Freq Range	Sets LO freq range	F_{RF}	700		1060	MHz
IF center Freq Range	Sets LO freq range	F_{IF}	100		250	MHz
Oversample RF Range	<ul style="list-style-type: none"> Measure Gain at I&Q Gain setting = G_{MAX} $F_{LO} = 950\text{ MHz}, 1080\text{ MHz}$ Gain Delta < 2.5 dB 	F_{RFD}	600		1150	MHz
Oversample IF Range	<ul style="list-style-type: none"> Measure Gain at I&Q Gain setting = G_{MAX} $F_{LO} = 950\text{ MHz}, 1080\text{ MHz}$ Gain Delta < 2.5 dB 	F_{IFD}	20		350	MHz
IF Linearity BW	<ul style="list-style-type: none"> RF Freq = 860 MHz OIP3 > +38 dBm $P_{IN} = -8\text{ dBm}$ per tone Gain setting = G_{MAX} 	IF_{LIN}	100		300	MHz
RF Linearity BW	<ul style="list-style-type: none"> IF Freq = 200 MHz OIP3 > +35 dBm $P_{IN} = -8\text{ dBm}$ per tone Gain setting = G_{MAX} 	RF_{LIN}	700		1100	MHz
LO Freq Range	Operating Range	F_{LOH}	650		1200	MHz
LO Power		P_{LO}	-3	0	+3	dBm
RF Return Loss	Single Ended - 50 Ω	Z_{RF}	15			dB
IF Return Loss	Differential - 100 Ω	Z_{IF}	15			dB
LO Return Los	Single Ended (- 50 Ω)	Z_{LO}	12			dB
Gain maximum	<ul style="list-style-type: none"> From RF_INX to I+,I- & Q+,Q- Gain setting = G_{MAX} Pin = -8 dBm 	G_{MAX}	7	8.5	10	dB
Gain minimum	<ul style="list-style-type: none"> From RF_INX to I+,I Gain setting = G_{MIN} Pin = +14 dBm 	G_{MIN}	-19	-17.2	-16	dB

F1325 SPECIFICATION – CONTINUED

Refer to Typical Application Circuit when operated with $V_{CC} = +5.0V$, $T_{CASE} = 25C$, $F_{RF} = 860\text{ MHz}$, $F_{LO} = 1060\text{ MHz}$, Gain = G_{MAX} , $P_{LO} = 0\text{ dBm}$, $T_C = +25^\circ C$, STBY = GND, unless otherwise noted. Full Lineup measured through to I or Q path. IF Transformers and RF trace losses de-embedded.

Parameter	Comment	Symbol	Min	Typ	Max	Units

Attenuator switched 16dB to 15.5dB					300		

SPECIFICATION NOTES:

- 1 – Items in min/max columns in **bold italics** are Guaranteed by Test
- 2 – All other Items in min/max columns are Guaranteed by Design Characterization
- 3 – Excludes SPI write time. Define Switching Time: The time from 50% CSb to 10%/90% settled to within 0.1dB of final value. Define Settling Time: The time from 50% CSb to 0.1dB of final value.

POWER-ON SEQUENCE

The power-on sequence ensures F1325 works in default mode once powered on. If the F1325 is programmed after applying DC power, the following power-on sequence is not needed. Note: To use power on sequence, SW_LATCH cannot be grounded permanently.

The power-on sequence should be:

1. CSb & SW_LATCH must be set low at power-on
2. Once powered on, first set SW_LATCH high, then set CSb high
3. Proceed with normal programming.

The default state after using power-on sequence:

- Maximum attenuationRan
- Normal operation (not Standby Mode)

SERIAL PROGRAMMING

The device is programmed via the serial port by asserting Chip Select (CSb). Note: Most-Significant-Bit first, where the Address Word is the Most-Significant-Byte.

Serial mode timing diagram high level:

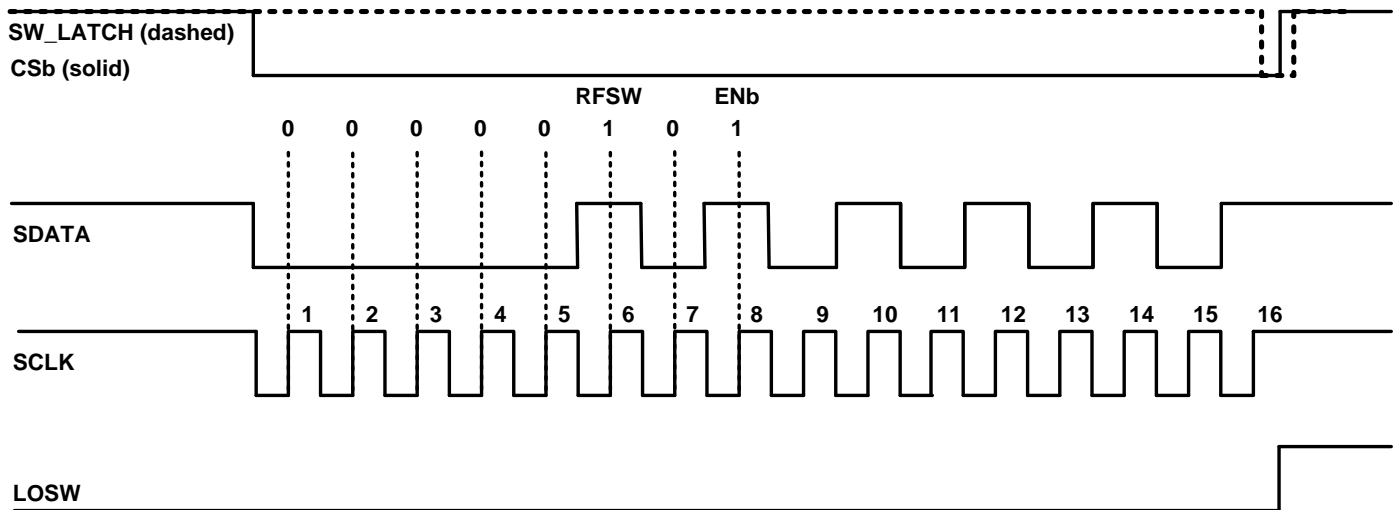

TO PROGRAM THE SERIAL INTERFACE:

If CSb is de-asserted (set to high), the serial interface will ignore the CLK line. Once CSb is asserted (set to low), the serial interface will recognize the CLK and any data present on DATA will be clocked into the registers with each rising CLK edge. After the 16th CLK cycle, and before the 17th CLK cycle, CSb must be de-asserted to successfully program the part with the desired bytes. If CSb is de-asserted before the 16th CLK cycle, or after the 17th CLK cycle, there is no guarantee that the correct bytes will be programmed and the user will have to re-program the interface in accordance with the aforementioned procedure.

SW_LATCH PROGRAMMING SEQUENCE

- When SW_LATCH is pinned high during the programming sequence, “ENb” registers cannot be programmed and therefore will not toggle.
- If SW_LATCH is pinned low during the programming sequence, the “ENb” register will toggle. This can be prevented with the “Programming Sequence” below.

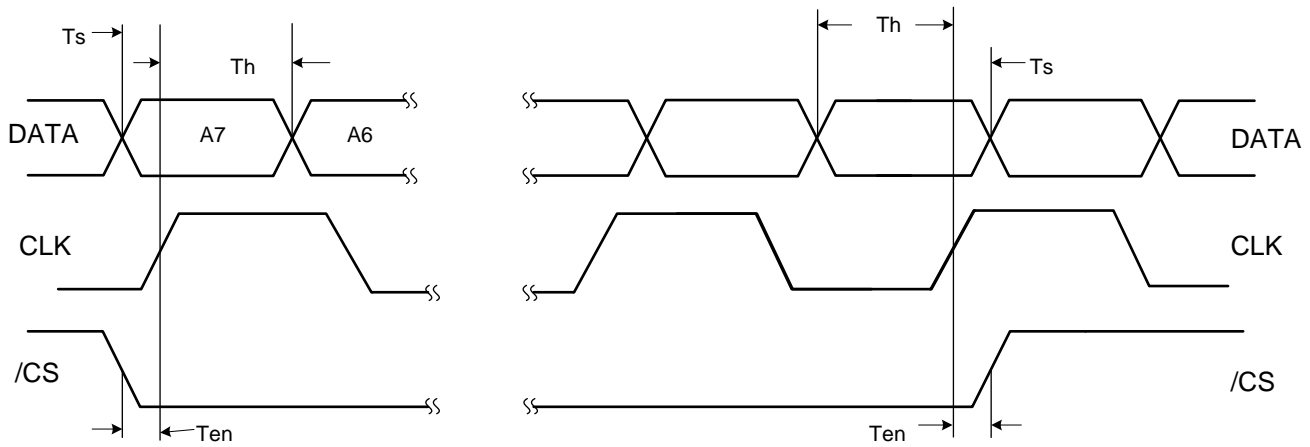

SEQUENCE FOR PROGRAMMING REGISTERS A<2>:A<0>

- 1) SW_Latch = 1; CSb = 0
- 2) CLK in 8- or 16-bit word, *do not de-assert (pull high) CSb*
- 3) Set SW_LATCH = 0 while CSb = 0 remains)
- 4) With SW_Latch = 0, set CSb = 1
- 5) Set SW_Latch = 1
- 6) Program complete

SPECIAL NOTE REGARDING PHASE OF I & Q:

- When LO is high-side injected, IF_I leads IF_Q by 90 degrees
- When LO is low-side injected, IF_Q leads IF_I by 90 degrees

SERIAL MODE TIMING DIAGRAM ZOOM:

- Data is shifted with the rising edge of CLK when /CS is low
- The rising edge of /CS latches data into the device

LOGIC TRUTH TABLE:

STBY	SW_LATCH	MODE	WRITE ACCESS
0	0	Operating Mode	A0 Enabled, D7:D0 Enabled
0	1	Operating Mode	A0 Disabled, D7:D0 Enabled
1	0	Off	A0 Enabled, D7:D0 Enabled
1	1	Off	A0 Disabled, D7:D0 Enabled

F1325 ATTENUATION TABLE

The F1325 gain/attenuation setting is controlled by 6 bits in the data word. The device provides an added attenuation range from 0 dB to 25.5 dB in 0.5 dB steps. A “high” or “1” bit corresponds to attenuation stepped IN, while a “low” or “0” bit corresponds to attenuation stepped OUT.

F1325 DPD Demodulator - Attenuation Table (Data Word D7-D0)						
BINARY	HEX	Added Atten (dB)		BINARY	HEX	Added Atten (dB)
00000000	00	0		00110100	34	13
00000010	02	0.5		00110110	36	13.5
00000100	04	1		00111000	38	14
00000110	06	1.5		00111010	3A	14.5
00001000	08	2		00111100	3C	15
00001010	0A	2.5		00111110	3E	15.5
00001100	0C	3		01000000	40	16
00001110	0E	3.5		01000010	42	16.5
00010000	10	4		01000100	44	17
00010010	12	4.5		01000110	46	17.5
00010100	14	5		01001000	48	18
00010110	16	5.5		01001010	4A	18.5
00011000	18	6		01001100	4C	19
00011010	1A	6.5		01001110	4E	19.5
00011100	1C	7		01010000	50	20
00011110	1E	7.5		01010010	52	20.5
00100000	20	8		01010100	54	21
00100010	22	8.5		01010110	56	21.5
00100100	24	9		01011000	58	22
00100110	26	9.5		01011010	5A	22.5
00101000	28	10		01011100	5C	23
00101010	2A	10.5		01011110	5E	23.5
00101100	2C	11		01100000	60	24
00101110	2E	11.5		01100010	62	24.5
00110000	30	12		01100100	64	25
00110010	32	12.5		01100110	66	25.5

Because the first and last bits of the Data Word are not presently used by the F1325, two additional hex character pairs exist in this table. For example, data words of either H00, H80, or H01 (binary “00000000,” “10000000,” or 00000001) will place the F1325 in its minimum attenuation state. Likewise, data words of either H66, HE6, or H67 (binary “01100110” or “11100110” or “01100111”) will place the F1325 in its maximum attenuation state of 25.5 added attenuation.

TYPICAL OPERATING CONDITIONS (TOC)

Unless otherwise noted, for the TOC graphs, the following conditions apply

- IF = 200 MHz
- Tone spacing = 5 MHz
- Pout ~ 1 dBm
- Pin = -8 dBm
- RF_X, LO_A, IF_I selected
- Attenuation Setting = 0 dB (min ATTN or G_{MAX})
- T_{CASE} = 25 °C
- V_{CC} = 5.00 V
- LO level = 0 dBm
- Output Transformer losses are de-embedded
- Input RF trace losses are de-embedded

PIN DIAGRAM

Signal Path Inputs &
Outputs in **BLUE**

PIN DESCRIPTIONS

Pins	Name	Function
1	SW_LATCH	Stand-by latch. Pull Low or Ground for Normal Operation. Pull High to disable SPI writes to ENb settings (A0: ENb).
2	RF_SEL	RF input selection. Logic High if pin left open selects RF_INY. Logic Low selects RF_INX.
3	RF_INY	Alternate RF Input. Separated from RF_INX by internal SP2T. AC couple to this pin. This is a reflective switch. The unselected port is not internally matched to 50 ohms.
4, 5, 8, 11,15, 21, 22, 30, 31, 32, 33 34, 36	GND	Ground these Pins.
6	LOB_GND	Ground for LO driver
7	LO_INB	LO Input B. AC couple to this pin. This is an absorptive switch so the unselected port is internally matched to 50 ohms. Selected Logic High via LO_SEL pin.
29,	NC	No Connection. Not internally connected. OK to connect to Vcc. Recommended Connection is Ground
9, 16, 25	VCC	Power Supply. Bypass to GND with capacitors shown in the Typical Application Circuit as close as possible to pin.
10	LO_ADJ	Connect the specified resistor from this pin to ground to set the LO path I _{cc} . This IS a current setting resistor
12	LO_INA	LO Input A. AC couple to this pin. This is an absorptive switch so the unselected port is internally matched to 50 ohms. Internally matched to 50 ohms. Selected Logic Low via LO_SEL pin.
13	LO_SEL	LO input selection. Logic High if pin left open selects LO_INB. Logic Low selects LO_INA.
14	STBY	STBY Mode. Pull this pin high for Standby mode (~25 mA). Pull low or Ground for normal Operation
17, 18	IF_BIAS_I IF_BIAS_Q	Connect the specified resistor from this pin to ground to set the IF amplifier bias reference. This is NOT a current setting resistor
19, 20	IF_I+, IF_I-	<i>In-Phase</i> Mixer Differential IF Output. Connect pullup inductors from each of these pins to V _{cc} (see the Typical Application Circuit).
23, 24	IF_Q-, IF_Q+	<i>Quadrature</i> Mixer Differential IF Output. Connect pullup inductors from each of these pins to V _{cc} (see the Typical Application Circuit).
26	CSb	Chip Select Bar. The falling edge initiates a programming cycle and the rising edge latches the programmed shift register data into the active register.
27	DATA	Serial Data Input
28	CLK	Serial Clock Input
35	RF_INX	Main RF Input. Separated from RF_INY by internal SP2T. AC couple to this pin. This is a reflective switch. The unselected port is not internally matched to 50 ohms.
	— EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the noted RF performance.

CONTROL PIN VOLTAGE & RESISTANCE VALUES (PINS NOT CONNECTED)

The following table provides open-circuit DC voltage and resistance values referenced to ground for each of the control pins listed.

Pin	Name	DC voltage (volts)	Resistance (ohms)
1	SW_LATCH	1.75	1.6M
2	RF_SEL	1.75	800K
13	LO_SEL	5	50K

POWER SUPPLIES

All supply pins should be bypassed with external capacitors to minimize noise and fast transients. Supply noise can degrade noise figure and fast transients can trigger ESD clamps and cause them to fail. Supply voltage change or transients should have a slew rate smaller than 1V/20uS. In addition, all control pins should remain at 0V (+/-0.3V) while the supply voltage ramps or while it returns to zero.

69

- Rev 2: Change Balun 4:1 (TC4-6TG2+) to 2:1 (TC2-72T+)
Delete C2-4 (100pF)
Replace R13-15 (0 ohm) to 3K
- Rev 3: Replace R1,2,10,24 (43K) to 75K & Replace R5,6,9,26 (75K) to 43K
- Rev 4: Replace R13-15 (3K ohm) to 100 ohm, Add C2-C4 100pF

TOP MARKINGS

Revision Date	Description
February 7, 2022	Rebranded to Renesas.
June 5, 2014	Initial release.

TOP VIEW

SIDE VIEW

BOTTOM VIEW

NOTES:

1. ALL DIMENSIONING AND TOLERANCING CONFORM TO ANSI Y14.5M-1982
2. ALL DIMENSIONS ARE IN MILLIMETERS.

RECOMMENDED LAND PATTERN DIMENSION

NOTES:

1. ALL DIMENSION ARE IN mm. ANGLES IN DEGREES.
2. TOP DOWN VIEW. AS VIEWED ON PCB.
3. COMPONENT OUTLINE SHOW FOR REFERENCE IN GREEN.
4. LAND PATTERN IN BLUE. NSMD PATTERN ASSUMED.
5. LAND PATTERN RECOMMENDATION PER IPC-7351B GENERIC REQUIREMENT FOR SURFACE MOUNT DESIGN AND LAND PATTERN.

Package Revision History		
Date Created	Rev No.	Description
Nov 8, 2021	01	Update IDT format to Renesas format
Apr 6, 2016	00	Initial Release

IMPORTANT NOTICE AND DISCLAIMER

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES (“RENESAS”) PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD-PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for developers who are designing with Renesas products. You are solely responsible for (1) selecting the appropriate products for your application, (2) designing, validating, and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. Renesas grants you permission to use these resources only to develop an application that uses Renesas products. Other reproduction or use of these resources is strictly prohibited. No license is granted to any other Renesas intellectual property or to any third-party intellectual property. Renesas disclaims responsibility for, and you will fully indemnify Renesas and its representatives against, any claims, damages, costs, losses, or liabilities arising from your use of these resources. Renesas' products are provided only subject to Renesas' Terms and Conditions of Sale or other applicable terms agreed to in writing. No use of any Renesas resources expands or otherwise alters any applicable warranties or warranty disclaimers for these products.
