

ISL70444SEH, ISL73444SEH

19MHz Radiation Hardened 40V Quad Rail-to-Rail Input - Output,  
Low-Power Operational Amplifiers

FN8411  
Rev.8.1  
Apr 15, 2021

The [ISL70444SEH](#) and [ISL73444SEH](#) (ISL7x444SEH) feature four low-power amplifiers optimized to provide maximum dynamic range. These operational amplifiers (op amps) feature a unique combination of rail-to-rail operation on the input and output as well as a slew enhanced front-end that provides ultra fast slew rates positively proportional to a given step size, thereby increasing accuracy under transient conditions, whether it's periodic or momentary. The ISL7x444SEH also offer low power, low offset voltage, and low temperature drift, making them ideal for applications requiring both high DC accuracy and AC performance. With <math><5\mu\text{s}</math> recovery for Single Event Transients (SET) ( $\text{LET}_{\text{TH}} = 86.4\text{MeV} \cdot \text{cm}^2/\text{mg}$ ), the number of filtering components needed is drastically reduced. The ISL7x444SEH are also immune to single event latch-up because they are fabricated using the Renesas proprietary PR40 Silicon On Insulator (SOI) process.

The amplifiers are designed to operate over a single supply range of 2.7V to 40V or a split supply voltage range of  $\pm 1.35\text{V}$  to  $\pm 20\text{V}$ . Applications for these amplifiers include precision instrumentation, data acquisition, precision power supply controls, and process controls.

The ISL7x444SEH are available in a 14 Ld hermetic ceramic flatpack and die forms that operate across the temperature range of  $-55^\circ\text{C}$  to  $+125^\circ\text{C}$ .

**Applications**

- Precision instruments
- Active filter blocks
- Data acquisition
- Power supply control
- Process control

**Features**

- Electrically screened to DLA SMD# [5962-13214](#)
- Acceptance tested to 50krad(Si) (LDR) wafer-by-wafer
- <math><5\mu\text{s}</math> recovery from SEE ( $\text{LET}_{\text{TH}} = 86.4\text{MeV} \cdot \text{cm}^2/\text{mg}$ )
- Unity gain stable
- Rail-to-rail input and output
- Wide gain-bandwidth product ..... 19MHz
- Wide single and dual supply range. .... 2.7V to 40V max
- Low input offset voltage ..... 400 $\mu\text{V}$
- Low current consumption (per amplifier) ..... 1.1mA, typ
- No phase reversal with input overdrive
- Slew rate
  - Large signal ..... 60V/ $\mu\text{s}$
- Operating temperature range. ....  $-55^\circ\text{C}$  to  $+125^\circ\text{C}$
- ISL70444SEH radiation acceptance (see TID report)
  - High dose rate (50-300rad(Si)/s) ..... 300krad(Si)
  - Low dose rate (0.01rad(Si)/s) ..... 50krad(Si)
- ISL73444SEH radiation acceptance (see TID report)
  - Low dose rate (0.01rad(Si)/s) ..... 50krad(Si)
- SEE hardness (see SEE report for details)
  - SEB  $\text{LET}_{\text{TH}}$  ( $V_S = \pm 21\text{V}$ ) .....  $86.4\text{MeV} \cdot \text{cm}^2/\text{mg}$
  - SEL immune (SOI Process)

N/A	ISL70444SEHEVAL1Z (Note 5)			Evaluation Board	

### NOTES:

- These Pb-free Hermetic packaged products employ 100% Au plate - e4 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations.
- Specifications for Rad Hard QML devices are controlled by the Defense Logistics Agency Land and Maritime (DLA). The SMD numbers listed must be used when ordering.
- The /PROTO and /SAMPLE are not rated or certified for Total Ionizing Dose (TID) or Single Event Effect (SEE) immunity. These parts are intended for engineering evaluation purposes only. The /PROTO parts meet the electrical limits and conditions across temperature specified in the DLA SMD and are in the same form and fit as the qualified device. The /SAMPLE parts are capable of meeting the electrical limits and conditions specified in the DLA SMD. The /SAMPLE parts do not receive 100% screening across temperature to the DLA SMD electrical limits. These part types do not come with a Certificate of Conformance because they are not DLA qualified devices.
- Die product tested at  $T_A = +25^\circ\text{C}$ . The wafer probe test includes functional and parametric testing sufficient to make the die capable of meeting the electrical performance outlined in the Electrical Specification tables starting on [page 5](#).
- The evaluation board uses /PROTO parts. The /PROTO parts are not rated or certified for Total Ionizing Dose (TID) or Single Event Effect (SEE) immunity.

**Absolute Maximum Ratings**

Maximum Supply Voltage	42V
Maximum Supply Voltage (Note 8)	42V
Maximum Differential Input Current	20mA
Maximum Differential Input Voltage	42V or $V^- - 0.5V$ to $V^+ + 0.5V$
Min/Max Input Voltage	42V or $V^- - 0.5V$ to $V^+ + 0.5V$
Max/Min Input Current for Input Voltage $>V^+$ or $<V^-$	$\pm 20$ mA
ESD Tolerance	
Human Body Model (Tested per MIL-PRF-883 3015.7)	2kV
Machine Model (Tested per JESD22-A115-A)	200V
Charged Device Model (Tested per CDM-22C10ID)	750V

**Thermal Information**

Thermal Resistance (Typical)	$\theta_{JA}$ ( $^{\circ}\text{C}/\text{W}$ )	$\theta_{JC}$ ( $^{\circ}\text{C}/\text{W}$ )
14 Ld Flatpack Package (Notes 6, 7)	35	9
Storage Temperature Range	-65 $^{\circ}\text{C}$ to +150 $^{\circ}\text{C}$	

**Recommended Operating Conditions**

Ambient Operating Temperature Range	-55 $^{\circ}\text{C}$ to +125 $^{\circ}\text{C}$
Maximum Operating Junction Temperature	+150 $^{\circ}\text{C}$
Single Supply Voltage	3V $\pm 10\%$ to 36V $\pm 10\%$
Split Rail Supply Voltage	$\pm 1.5V \pm 10\%$ to $\pm 18V \pm 10\%$

**CAUTION:** Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions can adversely impact product reliability and result in failures not covered by warranty.

**NOTES:**

- $\theta_{JA}$  is measured in free air with the component mounted on a high-effective thermal conductivity test board with direct attach features. See [TB379](#).
- For  $\theta_{JC}$ , the case temperature location is the center of the package underside.
- Tested in a heavy ion environment at LET = 86.4MeV • cm<sup>2</sup>/mg at +125 $^{\circ}\text{C}$  ( $T_C$ ) for SEB. See [Single Event Effects Test Report](#) for more information.

**Electrical Specifications  $V_S = \pm 18V$**   $V_{CM} = V_O = 0V$ ,  $R_L = \text{Open}$ ,  $T_A = +25^{\circ}\text{C}$ , unless otherwise noted. **Boldface limits apply across the operating temperature range, -55 $^{\circ}\text{C}$  to +125 $^{\circ}\text{C}$ .**

## Applications Information

### Functional Description

The ISL7x444SEH contain four high-speed and low-power op amps designed to take advantage of their full dynamic input and output voltage range with rail-to-rail operation. By offering low power, low offset voltage and low temperature drift coupled with its high bandwidth and enhanced slew rates upwards of  $50V/\mu s$ , these op amps are ideal for applications requiring both high DC accuracy and AC performance. The ISL7x444SEH are manufactured using the Renesas PR40 silicon-on-insulator process, which makes these devices immune to single event latch-up and provides excellent radiation tolerance. These features make the devices an ideal choice for high reliability applications in harsh radiation-prone environments.

### Operating Voltage Range

The ISL7x444SEH are designed to operate with a split supply rail from  $\pm 1.35V$  to  $\pm 20V$  or a single supply rail from  $2.7V$  to  $40V$ . The ISL7x444SEH are fully characterized in production for supply rails of  $5V (\pm 2.5V)$  and  $36V (\pm 18V)$ . The power supply rejection ratio is typically  $120\text{dB}$  over the full operating voltage range. The worst case Common-Mode Rejection Ratio (CMRR) across temperature is within  $1.5V$  to  $2V$  of each rail. When  $V_{CM}$  is inside that range, the CMRR performance is typically  $>110\text{dB}$  with a  $\pm 18V$  supply. The minimum CMRR performance across the  $-55^\circ C$  to  $+125^\circ C$  temperature range and radiation is  $>70\text{dB}$  over the full common-mode input range for power supply voltages from  $\pm 2.5V$  ( $5V$ ) to  $\pm 18V$  ( $36V$ ).

### Input Performance

The slew enhanced front-end is a block that is placed in parallel with the main input stage and functions based on the input differential.

### Input ESD Diode Protection

The input terminals (IN+ and IN-) have internal ESD protection diodes to the positive and negative supply rails, series connected

$600\Omega$  current limiting resistors and an anti-parallel diode pair across the inputs.

FIGURE 62. INPUT ESD DIODE CURRENT LIMITING, UNITY GAIN

### Output Short-Circuit Current Limiting

The output current limit has a worst case minimum limit of  $\pm 10\text{mA}$  but may reach as high as  $\pm 100\text{mA}$ . The op amp can withstand a short-circuit to either rail for a short duration ( $<1s$ ) as long as the maximum operating junction temperature is not violated. This applies to only one amplifier at a given time. Continued use of the device in these conditions may degrade the long term reliability of the part and is not recommended.

Figure 20 shows the typical short-circuit currents that can be expected. The ISL7x444SEH's current limiting circuitry automatically lowers the current limit of the device if short-circuit conditions carry on for extended periods of time. This protects the device from malfunction; however, extended operation in this mode degrades the output rail-to-rail performance by increasing the  $V_{OH}/V_{OL}$  levels.

### Output Phase Reversal

Output phase reversal is a change of polarity in the amplifier transfer function when the input voltage exceeds the supply voltage. The ISL7x444SEH are immune to output phase reversal, even when the input voltage is  $1V$  beyond the supplies. This is illustrated in Figure 51.

## Power Dissipation

It is possible to exceed the +150°C maximum junction temperature under certain load and power supply conditions. It is therefore important to calculate the maximum junction temperature ( $T_{JMAX}$ ) for all applications to determine if power supply voltages, load conditions, or package type need to be modified to remain in the safe operating range. These parameters are related using [Equation 1](#):

$$T_{JMAX} = T_{MAX} + \theta_{JA} \times PD_{MAXTOTAL} \quad (EQ. 1)$$

where:

- $PD_{MAXTOTAL}$  is the sum of the maximum power dissipation of each amplifier in the package ( $PD_{MAX}$ )
- Calculate  $PD_{MAX}$  for each amplifier using [Equation 2](#):

$$PD_{MAX} = V_S \times I_{qMAX} + (V_S - V_{OUTMAX}) \times \frac{V_{OUTMAX}}{R_L} \quad (EQ. 2)$$

where:

- $T_{MAX}$  = Maximum ambient temperature
- $\theta_{JA}$  = Thermal resistance of the package
- $PD_{MAX}$  = Maximum power dissipation of one amplifier
- $V_S$  = Total supply voltage
- $I_{qMAX}$  = Maximum quiescent supply current of one amplifier
- $V_{OUTMAX}$  = Maximum output voltage swing of the application

## Slew Rate Enhancement

The ISL7x444SEH have slew enhanced front-end that increases the drive on the output transistors proportional to the differential voltage across the inputs. This increase in output drive shows up as increased transient current on top of the op amp's steady state supply current. If the voltage differential between the inputs remains constant, as in comparator applications, the added drive current to the output transistors becomes steady state and increases the DC power supply current of the IC. For this reason, we do not recommended using the ISL7x444SEH in a comparator configuration.

## Unused Channel Configuration

If the application does not require the use of all four op amps, you must configure the unused channels to prevent it from oscillating. Any unused channels oscillate if the input and output pins are floating. The oscillation results in higher than expected supply currents and possible noise injection into any of the active channels in use. The proper way to prevent oscillation is to short the output to the inverting input and tie the positive input to a known voltage, such as mid-supply.

When the  $V^-$  supply is less than or equal to -1.0V, configure your op amp as in [Figure 63](#), or follow the configuration shown in [Figure 64](#). The resistors in [Figure 64](#) are of equal value and high resistance ( $\geq 10k\Omega$ ) to minimize current draw, while keeping the positive input at mid-supply. All unused op amps can have their inputs tied to the same resistor divider to minimize the number of components.

Tying the positive input to ground in [Figure 64](#) (where  $V^- = GND$ ) would produce a voltage differential across the inputs, as the inverting input would be at the op amp's  $V_{OL}$  and the positive input would be at GND, causing an increase in the steady state supply current. While this does not damage the op amp, the increased supply current would result in additional unnecessary power dissipation.

## Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please visit our website to make sure that you have the latest revision.

DATE	REVISION	CHANGE
Apr 15, 2021	8.1	Changed $\pm 8\text{mA}$ to $\pm 10\text{mA}$ in the Output Short-Circuit Current Limiting section on page 20.
Nov 16, 2020	8.0	Updated Note 3 and added Note 4. Updated Power Supply Rejection Ratio typical from 128 to 143 in the $\pm 18\text{V}$ EC specification table. Updated Power Supply Rejection Ratio typical from 123 to 135 in the $\pm 2.5\text{V}$ EC specification table. Updated Figure 35 and added Figures 36 and 37.
Aug 16, 2019	7.0	Updated SEE and TID ratings in Features section. Added radiation levels to ordering information table. Removed Table 1.
Mar 28, 2019	6.0	Updated links throughout document. Added ISL73444SEH information throughout document. Added Table 1. Updated Disclaimer.
Jan 19, 2018	5.0	Added "Slew Rate Enhancement" section on page 20. On page 21 - Updated "Unused Channel Configuration" section, updated Figure 61 and added Figure 62. Removed "About Intersil" section. Added new disclaimer.

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please visit our website to make sure that you have the latest revision. **(Continued)**

DATE	REVISION	CHANGE
Jul 6, 2017	4.0	<p>Updated Related Literature section.            Changed low input voltage from 300<math>\mu</math>V to 400<math>\mu</math>V in features list.            Added Notes 3 and 4.            Electrical Specification updates:  <b>VS = <math>\pm</math>1.8V table:</b>            Updated Offset Voltage from "300" to "400" and "400" to "500".            Updated Input Offset Current from "-17" to "-30" (min) and "17" to "30" (max) unbolded values.            Added another Input Offset Current line and bolded.            Updated PSRR min from "88" to "83"  <b>VS = <math>\pm</math>2.5V table:</b>            Updated Offset Voltage from "300" to "400" and "400" to "500". Jun 14, 2013	1.0	<p>Changed Radiation tolerance High dose rate from 100krad(Si) to 300krad(Si) on page 1 features and in Electrical Spec Table conditions on pages 7 and 8.            Added SR spec for V<sub>S</sub> = <math>\pm</math>1.8V to Electrical Spec Table on page 8.            Removed Max limit of 300 for V<sub>OS</sub> Offset Voltage in V<sub>S</sub> = <math>\pm</math>1.8V, V<sub>S</sub> = <math>\pm</math>2.5V and V<sub>S</sub> = <math>\pm</math>1.5V Spec tables.</p>
May 23, 2013	0.0	Initial Release.

# Package Outline Drawing

For the most recent package outline drawing, see [K14.C](#).

K14.C

14 Lead Ceramic Metal Seal Flatpack Package

Rev 0, 9/12

**NOTES:**

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions (section A-A) shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Measure dimension at all four corners.
4. For bottom-brazed lead packages, no organic or polymeric materials shall be molded to the bottom of the package to cover the leads.
5. Dimension shall be measured at the point of exit (beyond the meniscus) of the lead from the body. Dimension minimum shall be reduced by 0.0015 inch (0.038mm) maximum when solder dip lead finish is applied.
6. The bottom of the package is a solderable metal surface.
7. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
8. Dimensions: INCH (mm). Controlling dimension: INCH.

## IMPORTANT NOTICE AND DISCLAIMER

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES (“RENESAS”) PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.
