RX610 Group Connection Example

The following is a connection example for the RX Family RX610 Group and E1/E20 emulator(14pin).
Pull-up and pull-down resistance values are provided for reference only. Please perform an evaluation on your system to confirm actual values.
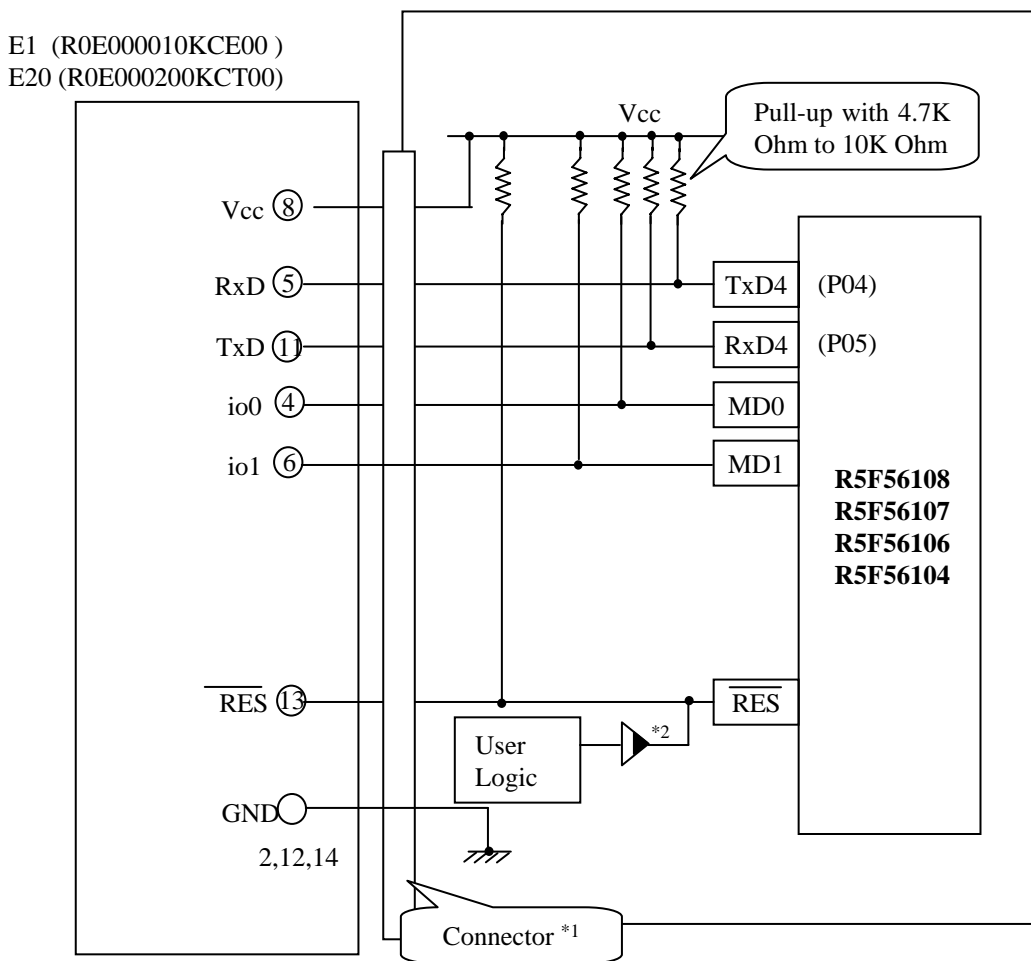

Although this connection example has been confirmed on paper, it is the user's responsibility to perform an evaluation on the user system to determine applicability. Renesas assumes no responsibility for determining the applicability of this example on the user system.

•This connection example is for using the Flash Development ToolKit with E1/E20 as a flash programmer.
When you use E1 or E20 as a debugger, please refer to the connection example in the E1/E20 Emulator Additional Document for User's Manual prepared for each MCU group. You can download the E1/E20 Emulator Additional Document for User's Manual from the following URLs.
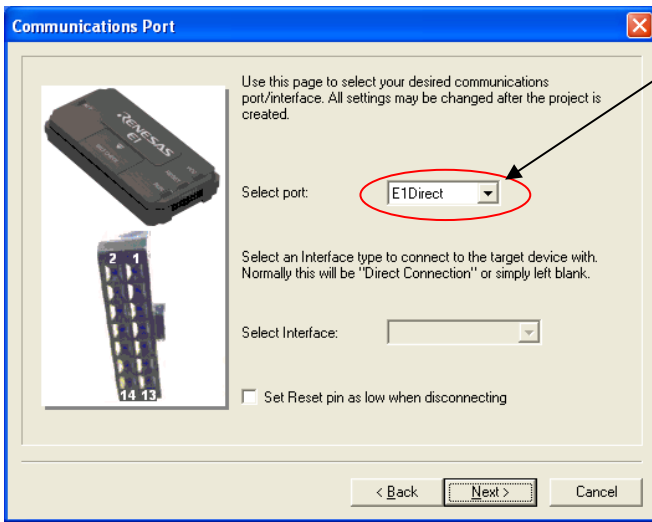

http://www.renesas.com/e1
http://www.renesas.com/e20

*1 Connector manufacturer and model name

	Model Name	Manufacturer	Specification type
14-pin connector	2514-6002	3M Limited	14-pin straight type (recommended for overseas use)

*2 Open connector buffer
Flash Development ToolKit Settings

Select [E1aDirect]
or
Select [E20aDirect]

Communications Port

Use this page to select your desired communications port/interface. All settings may be changed after the project is created.

Select port: E1Direct

Select an Interface type to connect to the target device with. Normally this will be "Direct Connection" or simply left blank.

Select Interface:

☐ Set Reset pin as low when disconnecting

< Back   Next >   Cancel

Pin Setting

Pin Settings

Please set the pin values for connection :

	io5	io4	io3	io2	io1	io0
Pin Outputs	☐	☐	☐	☐	☑	☑ = 0x03
Pin Setting (High)	☐	☐	☐	☐	☐	☑ = 0x01

WARNING: Incorrect settings could damage your hardware

OK   Cancel

E1/E20 14pin Connector:

Pin 2   **Pin 14**

Pin 1   **Pin 13**

Pin No.	E1 Pin Name (Flash Development ToolKit Settings)
1	io4
2	GND
3	Io5
4	Io0
5	RxD (user-side TxD)
6	io1
7	Io3
8	UVcc
9	UVcc2
10	Io2
11	TxD (user-side RxD)
12	GND
13	/RES
14	GND

(1) Make sure pins 2, 8, 12, 13 and 14 are connected

(2) Set unused pins to NC (Non Connect).

RX62T Group Connection Example

 The following is a connection example for the RX Family RX62T Group and E1/E20 emulator(14pin).
Pull-up and pull-down resistance values are provided for reference only. Please perform an evaluation on your
system to confirm actual values.
 Although this connection example has been confirmed on paper, it is the user's responsibility to perform an
evaluation on the user system to determine applicability. Renesas assumes no responsibility for determining the
applicability of this example on the user system.
•This connection example is for using the Flash Development ToolKit with E1/E20 as a flash programmer.
When you use E1 or E20 as a debugger, please refer to the connection example in the E1/E20 Emulator
Additional Document for User's Manual prepared for each MCU group. You can download the E1/E20 Emulator
Additional Document for User's Manual from the following URLs.
