All information contained in these materials, including products and product specifications, represents information on the product at the time of publication and is subject to change by Renesas Electronics Corp. without notice. Please review the latest information published by Renesas Electronics Corp. through various means, including the Renesas Electronics Corp. website (<http://www.renesas.com>).

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Precaution against Electrostatic Discharge (ESD)

A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

2. Processing at power-on

The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

3. Input of signal during power-off state

Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

4. Handling of unused pins

Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

5. Clock signals

After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

6. Voltage application waveform at input pin

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (Max.) and V_{IH} (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (Max.) and V_{IH} (Min.).

7. Prohibition of access to reserved addresses

Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

8. Differences between products

Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems. The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Renesas VK-RA8M1 Disclaimer

By using this VK-RA8M1, the User accepts the following terms, which are in addition to, and control in the event of disagreement, with Renesas' General Terms and Conditions available at <https://www.renesas.com/en-us/legal/disclaimer.html>.

The VK-RA8M1 is not guaranteed to be error free, and the entire risk as to the results and performance of the VK-RA8M1 is assumed by the User. The VK-RA8M1 is provided by Renesas on an "as is" basis without warranty of any kind whether express or implied, including but not limited to the implied warranties of good workmanship, fitness for a particular purpose, title, merchantability, and non-infringement of intellectual property rights. Renesas expressly disclaims any implied warranty.

Renesas does not consider the VK-RA8M1 to be a finished product and therefore the VK-RA8M1 may not comply with some requirements applicable to finished products, including, but not limited to recycling, restricted substances and electromagnetic compatibility regulations. Refer to Certifications section, for information about certifications and compliance information for the VK-RA8M1. It is the kit User's responsibility to make sure the kit meets any local requirements applicable to their region.

Renesas or its affiliates shall in no event be liable for any loss of profit, loss of data, loss of contract, loss of business, damage to reputation or goodwill, any economic loss, any reprogramming or recall costs (whether the foregoing losses are direct or indirect) nor shall Renesas or its affiliates be liable for any other direct or indirect special, incidental or consequential damages arising out of or in relation to the use of this VK-RA8M1, even if Renesas or its affiliates have been advised of the possibility of such damages.

Renesas has used reasonable care in preparing the information included in this document, but Renesas does not warrant that such information is error free nor does Renesas guarantee an exact match for every application or parameter to part numbers designated by other vendors listed herein. The information provided in this document is intended solely to enable the use of Renesas products. No express or implied license to any intellectual property right is granted by this document or in connection with the sale of Renesas products. Renesas reserves the right to make changes to specifications and product descriptions at any time without notice. Renesas assumes no liability for any damages incurred by you resulting from errors in or omissions from the information included herein. Renesas cannot verify, and assumes no liability for, the accuracy of information available on another company's website.

Precautions

This Voice Kit is only intended for use in a laboratory environment under ambient temperature and humidity conditions. A safe separation distance should be used between this and any sensitive equipment. Its use outside the laboratory, classroom, study area, or similar such area invalidates conformity with the protection requirements of the Electromagnetic Compatibility Directive and could lead to prosecution.

The product generates, uses, and can radiate radio frequency energy and may cause harmful interference to radio communications. There is no guarantee that interference will not occur in a particular installation. If this equipment causes harmful interference to radio or television reception, which can be determined by turning the equipment off or on, you are encouraged to try to correct the interference by one or more of the following measures:

- Ensure attached cables do not lie across the equipment.
- Reorient the receiving antenna.
- Increase the distance between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that which the receiver is connected.
- Power down the equipment when not in use.
- Consult the dealer or an experienced radio/TV technician for help.

Note: It is recommended that wherever possible shielded interface cables are used.

The product is potentially susceptible to certain EMC phenomena. To mitigate against them it is recommended that the following measures be undertaken:

- The user is advised that mobile phones should not be used within 10 m of the product when in use.
- The user is advised to take ESD precautions when handling the equipment.

The Voice Kit does not represent an ideal reference design for an end product and does not fulfill the regulatory standards for an end product.

1. Kit Contents

The following components are included in the kit:

1. VK-RA8M1 board
2. Micro USB device cable (type-A male to micro-B male)
3. Mic Board

Figure 1. VK-RA8M1 Kit Contents

2. Kit Ordering Information

VK-RA8M1 kit orderable part number: RTK0EG0005D00001BE

3. Kit Overview

VK-RA8M1 is an edge voice user interface Voice kit designed to be used by Ecosystem Partners, Application Engineers, Field Application Engineers, and for Business Development opportunities. The primary purpose is to evaluate the functionality of projects developed by Ecosystem Partners, and to facilitate the development of additional partner projects. The kit design uses the RA8M1 MCU with LQFP 100pin package as the core logic device, with OSPI flash, OPAMP and power devices chosen from the Renesas product portfolio.

- Renesas RA8M1 Microcontroller Group
 - Arm® Cortex®-M85 core with Helium™
 - LQFP 100pin package
 - Maximum operating frequency: 480 MHz
 - 2MB code flash memory
 - 12KB data flash memory
 - Flash Cache (FCACHE)
 - 1MB SRAM
 - 1KB Standby SRAM
- Connectivity
 - One USB micro AB full speed connector for the Main MCU
 - SEGGER J-Link® On-board (OB) interface for debugging and programming. A 10 pin JTAG/SWD interface is also provided for connecting optional external debuggers and programmers.
 - One PMOD connector

- One Auxiliary Port connector
- Multiple Clock Sources
 - Main clock oscillator (MOSC) (8 to 48 MHz)
 - Sub-clock oscillator (SOSC) (32.768 kHz)
 - High-speed on-chip oscillator (HOCO) (16/18/20/32/48 MHz)
 - Middle-speed on-chip oscillator (MOCO) (8 MHz)
 - Low-speed on-chip oscillator (LOCO) (32.768 kHz)
- Microphones: 2 I2S MEMS digital microphones and 2 MEMS analog microphones.
- Mic-Board Microphones: 6 MEMS digital microphones
- Audio out: One stereo audio headphone jack supporting mono output on both channels.
- Mic-Board Audio out: One stereo audio headphone jack supporting mono output on both channels.
- LEDs: Five LEDs, D1 (Red), D2 (Green) and D3 (Blue) configurable by user, D6 (Blue) as a 3.3V power indicator, D8(Green) as a JLOB (J-LINK on board) indicator.
- Buttons: One RESET button (S2), and one USER button (S1).
- Debug: J-Link On-Board debug interface, supporting JTAG or SWD debug port.
- USB: Micro USB-B (J9) for power input and J-Link On-Board function, USB-C (J2) for power input and RA8M1 USB Full Speed port as a USB device.

4. Kit Architecture

4.1 System Block Diagram

Figure 2. System Block Diagram

4.2 Jumper Settings

Two types of jumpers are provided on the VK-RA8M1 board.

1. Traditional pin header jumpers copper jumpers
2. Copper jumpers (trace-cut type and solder bridge type)

4.2.1 Traditional Pin Header Jumpers

These jumpers are traditional small pitch jumpers that require an external shunt to open/close them. The traditional pin jumpers on the VK-RA8M1 board are 2.54mm pitch headers and require compatible 2.54mm shunt jumpers.

Default Jumper Configuration

The following table describes the default settings for each jumper on the VK-RA8M1 board. This includes copper jumpers (Ex designation) and traditional pin jumpers (Jx designation.)

Functional details for many of the listed jumpers may be found in sections associated with each functional area of the kits.

Table 1. Default Jumper Settings

Location	Default Open/Closed	Function
J3	Open	Short to route I2C SDA signal to PMOD connector pin 4
J4	Open	Close to configures the RA8M1 MCU enter USB boot mode, code can be download through J2 USB TYPE-C connector.
J6	Short	For MCU current measurement, remove this jumper wire and serial with a current meter to measure MCU current.
J7	Open	Short with MIC Board to enable Audio breakout
J10	Open	Short with a jumper wire to set on board debug RA4M2 MCU(U7) in RESET for disable on board debug.

4.2.2 Copper Jumpers

Copper jumpers are of two types, designated trace-cut and solder-bridge.

A trace-cut jumper is provided with a narrow copper trace connecting its pads. The silk screen overlay printing around a trace-cut jumper is a solid box. To isolate the pads, cut the trace between pads adjacent to each pad, then remove the connecting copper foil either mechanically or with the assistance of heat. Once the etched copper trace is removed, the trace-cut jumper is turned into a solder-bridge jumper for any later changes.

A solder-bridge jumper is provided with two isolated pads that may be joined together by one of three methods:

- Solder may be applied to both pads to develop a bulge on each and the bulges joined by touching a soldering iron across the two pads.
- A small wire may be placed across the two pads and soldered in place.
- A SMT resistor, size 0805, 0603, or 0402, may be placed across the two pads and soldered in place. A zero-ohm resistor shorts the pads together.

For any copper jumper, the connection is considered closed if there is an electrical connection between the pads (default for trace-cut jumpers.) The connection is considered open if there is no electrical connection between the pads (default for the solder-bridge jumpers.)

Figure 3. Copper Jumpers

P815	USBFS_DM

6. Implementation Details

6.1 OSPI NOR flash

There is one OSPI Flash on board. The device is ISSI IS25LX512M-JHLE 512 Mbit, 133 MHz in a 24-ball TFBGA 6x8mm (5x5 ball array) package.

Table 4. OSPI Flash Port Assignments

6.3 Microphones

This board includes a pair of analog MEMS microphones (M1 & M2, 3SM121LZB1HA). These 2 analog microphone signals are amplified by Renesas READ2302GSP OPAMP, then fed to RA8M1 AN channels 0 & 1. A pair of digital I2S MEMS microphone (M3 & M4, ZillTek ZTS6672) is also provided, which is connected to RA8M1 SSI channel. The physical distance between each microphone is 14mm.

	3.3V	M3.5 – VDD
	SSIBCK0	M3.6 – DATA
		M3.7 – CONFIG

Table 9. Digital I2S MEMS Microphone channels (M4) Port Assignments

MCU Port	SSI Signal	MEMS microphone Pin
P113	SSILRCK0	M4.1 – LRC
	3.3V – for Select as right channel	M4.2 – SELECT
	GND	M4.3 – GND
P114	SSIRXD0	M4.4 – BCLK
	3.3V	M4.5 – VDD
	SSIBCK0	M4.6 – DATA
		M4.7 – CONFIG

6.4 Audio out

A headphone jack is connected to the MCU DAC. The DAC signals are connected through an OPAMP. The device is Renesas READ2302GSP, in ultra-small 8 pins TSSOP packages.

Table 10. Headphone Jack Pin Assignments

MCU Port	Audio out Signal	Headphone Jack Pin
P014 (DA0)	VOUT1	1 (Sleeve)
	VOUT2	2 (Mono signal)
	VOUT2	3 (Mono signal)

Figure 5. Audio out

6.5 LEDs

3 LEDs are included on the board and are connected to the MCU I/O. These are Red, Green, and Blue, and can be used for any user defined functions.

Table 11. User LED Port Assignments

MCU Port	Connected User LED
P404	Red (D1)
P405	Green (D2)
P406	Blue (D3)

D6 (blue) is power LED, and D8 (Green) is debug status LED to indicate the status of the JLOB connection.

6.6 Buttons

There are two mechanical push-button switches on the board. One button is for system/MCU reset (S2). The second button is a user programmable button (S1).

Table 12. User Button Port Assignment (S1)

MCU Port	User Button Interrupt
P400	IRQ0

6.7 Audio breakout to MIC board

One connector (2x5 pin, dual row, right angle socket) is included (J7) and is used for the Audio Breakout connector. Plug with MIC BOARD will pull low DA7218#, I2S bus will automatic mux to DA7218.

Table 13. Connector Port Assignment (J7)

MCU Port	Connector Signal	Connector Pin
	GND	1
	+3.3V	2
P600	DA7218#	3
	NA	4
	I2S_DAT_IN1	5
	I2S_DAT_OUT1	6
	2S_LRCK1	7
	I2S_BCK1	8
P205	SCL1	9
P206	SDA1	10

6.8 Debug

The VK-RA8M1 board supports following three debug modes.

Table 14. Supported Debug Modes

Debug Modes	Debug MCU (one that connects to the IDE on PC)	Target MCU (one that is being debugged)	Debugging Interface/Protocol	Connector Used
Debug on-board	RA4M2 (on-board)	RA8M1 (on-board)	SWD, JTAG	Micro USB (J9)
Debug in	External debugging tools	RA8M1 (on-board)	SWD, JTAG	20-pin connector (J13) NoP or 10-pin connector (J12)
Debug out	RA4M2 (on-board)	Any external RA MCU	SWD, JTAG	20-pin connector (J13) NoP or 10-pin connector (J12)

Notes:

- **Please cut E10 for Debug out function**
- See Table 16 for the Debug USB connector pin definition.
- See Table 17 for the 10-pin JTAG connector pin definition.
- See Table 18 for the 20-pin JTAG connector pin definition.

Table 15. Jumper Connection Summary for Different Debug

Debug Modes	J10
Debug on-board	Open
Debug in	Closed
Debug out	Open

The J-Link On-Board (JLOB) debug interface supports JTAG, SWD debug interface and also supports the VCOM (Virtual COM port) function. The debug MCU is a Renesas RA4M2, programmed with J-Link firmware licensed by SEGGER. This interface includes one USB micro-B connector (J9) for host debug through the J-Link MCU, one 10-pin and one 20-pin debug header (supporting JTAG and SWD).

Table 16. Debug USB Connector

Debug USB Connector(J9)		RA4M2
Pin	Description	Signal / Bus
J9-1	+5VDC	VBUS2 / TP5
J9-2	Data-	D_N
J9-3	Data+	D_P
J9-4	USB ID, jack internal switch, cable inserted	N.C.
J9-5	Ground	GND

Table 17. 10-pin JTAG/SWD Connector (J12)

Pin	JTAG Pin Name	SWD Pin Name	Signal/Bus
J12-1	Vtref	Vtref	+3V3
J12-2	TMS	SWDIO	P108/SWDIO
J12-3	GND	GND	GND
J12-4	TCK	SWCLK	P300/SWCLK
J12-5	GND	GND	GND
J12-6	TDO		
J12-7	Key	Key	N.C.
J12-8	TDI		
J12-9	GND Detect	GND Detect	GND
J12-10	nSRST	nSRST	RESET#

Table 18. 20-pin JTAG/SWD Connector (J13)

Pin	JTAG Pin Name	SWD Pin Name	Signal/Bus
J13-1	Vtref	Vtref	+3V3
J13-2	TMS	SWDIO	P108/SWDIO
J13-3	GND	GND	GND
J13-4	TCK	SWCLK	P300/SWCLK
J13-5	GND	GND	GND
J13-6	TDO		P109
J13-7	Key	Key	N.C.
J13-8	TDI		P110
J13-9	GND Detect	GND Detect	GND

J13-11	N/A	N/A	GND
J13-12	N/A	N/A	N.C.
J13-13	N/A	N/A	GND
J13-14	N/A	N/A	N.C.
J13-15	N/A	N/A	GND
J13-16	N/A	N/A	N.C.
J13-17	N/A	N/A	GND
J13-18	N/A	N/A	N.C.
J13-19	N/A	N/A	GND
J13-20	N/A	N/A	N.C.

Table 19. Debug Port Signal Assignments

RA8M1 MCU Port	Debug signal usage
P108	TMS/SWDIO
P109	TDO
P110	TDI
P300	TCK/SWCLK

6.9 Power Requirements

VK-RA8M1 is designed for +5V operation. An on-board Low Dropout Regulator (LDO) is used to convert the 5V supply to 3.3V, which is then used to power the main MCU and many of the peripheral features of the VK-RA8M1.

6.9.1 Power Supply Options

VK-RA8M1 can be powered in three different ways as described in this section.

Figure 6. Power Supply Options

6.9.2 Option 1: Debug USB

5V may be supplied from an external USB host to the USB Debug connector (J9). Power from this source is connected to the Main System 5V Power. Reverse current protection is provided between this connector and the Main System 5V Power.

6.9.3 Option 2: USB C Full Speed

5V may be supplied from an external USB host to the USB C connector (J2) labelled USB C on the board. Power from this source is connected to the Main System 5V Power. Reverse current protection is provided between this connector and the Main System 5V Power.

6.9.4 Option 3: External Power Supply

5V may be supplied from an external header (J1).

6.9.5 Power-up Behavior

When powered, the blue D6 LED will light up. See the VK-RA8M1 Getting Started Guide for further information on initial power up behavior.

6.10 USB

The board includes one USB TYPE-C connector (J2), supporting USB Full Speed device mode.

Table 20. USB Type-C Signal Assignments (J2)

MCU Port	USB-C Signal Name	USB-C Connection
	Ground	A1
	TX1+	A2
	TX1-	A3
	VBUS	A4
	Configuration Detection (CC1)	A5
DA_P	DP1	A6

	Configuration Detection 2(SBU2)	B8
	VBUS	B9
	RX1-	B10
	RX1+	B11
	Ground G	B12

6.11 MIC-Board

MIC-Board can be connected to J7 in VK-RA8M1 to add I2S MEMS microphones.

6.11.1 Microphones

This board includes 6 digital I2S MEMS microphones (M5, M6, M7, M8, M9 & M10, 3SM222KMB1HA). Uses two topologies.

Topology 1: Square array of 4 mics spaced by 40mm (edge length). Microphones M5, M6, M7, M8. (**short J16, pin1-2**).

Topology 2: Equilateral triangle array of 3 mics located to the corners, spaced by 40mm (edge length) and the fourth mic at the center. Microphones M5, M6, M9, M10. (**short J16, pin2-3**).

MIC board includes the Renesas DA7218 IC Audio codec.

7. Certifications

7.1 EMC/EMI Standards

- FCC Notice (Class A)

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE- This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/television technician for help.

- Innovation, Science and Economic Development Canada ICES-003 Compliance:

CAN ICES-3 (A)/NMB-3(A)

- CE Class A (EMC)

This product is herewith confirmed to comply with the requirements set out in the Council Directives on the Approximation of the laws of the Member States relating to electromagnetic Compatibility Directive 2004/108/EEC.

Warning – This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures to correct this interference.

8. Design and Manufacturing Information

The design and manufacturing information for the VK-RA8M1 V2 kit is available in the “VK-RA8M1 V2 Design Package” available on renesas.com/vk-ra8m1.

- Design package file name: VK-RA8M1-V2-designpackage.zip
