## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Three EPROMs are required for each pattern if this order is performed by EPROMs.  
One floppy disk is required for each pattern if this order is performed by a floppy disk.

Ordering by EPROMs

If at least two of the three sets of EPROMs submitted contain identical data, we will produce masks based on this data. We shall assume the responsibility for errors only if the mask ROM data on the products we produce differs from this data. Thus, extreme care must be taken to verify the data in the submitted EPROMs.

## 740 FAMILY MASK ROM CONFIRMATION FORM

### SINGLE-CHIP MICROCOMPUTER M38747MCT-XXXGP

### RENESAS TECHNOLOGY

We recommend the use of the following pseudo-command to set the start address of the assembler source program because ASCII codes of the product name are written to addresses 0000<sub>16</sub> to 0009<sub>16</sub> of EPROM.

We also recommend the use of the following pseudo-command to set the start address of the assembler source program because ASCII codes of the sub-ROM number are written to addresses 0010<sub>16</sub> to 0017<sub>16</sub> of EPROM.

EPROM type	27512	27101
The pseudo-command	*= $\Delta$ \$0000 .BYTE $\Delta$ 'M38747MCT-'	*= $\Delta$ \$0000 .BYTE $\Delta$ 'M38747MCT-'

Note : In the following cases, the ROM will not be processed.

- If the name of the product written to the EPROMs does not match the name of the mask ROM confirmation form.
- If the specified sub-ROM number is not released.

Ordering by floppy disk

We will produce masks based on the mask files generated by the mask file generating utility. We shall assume the responsibility for errors only if the mask ROM data on the products we produce differs from this mask file. Thus, extreme care must be taken to verify the mask file in the submitted floppy disk.

• Precautions when using the mask file generating utility

Sub-ROM number for the data link layer communication control circuit is input as option information in this product. Input sub-ROM number eight characters by ASCII codes as follows.

However, in the following cases, the ROM will not be processed.

- If the input sub-ROM number does not match the number of the mask ROM confirmation form.
- If the specified sub-ROM number is not released.

Address		ASCII codes
10 <sub>16</sub>	The 1st character of sub-ROM number	'0' = 30 <sub>16</sub>
11 <sub>16</sub>	The 2nd character of sub-ROM number	'1' = 31 <sub>16</sub>
12 <sub>16</sub>	The 3rd character of sub-ROM number	'2' = 32 <sub>16</sub>
13 <sub>16</sub>	The 4th character of sub-ROM number	'3' = 33 <sub>16</sub>
14 <sub>16</sub>	The 5th character of sub-ROM number	'4' = 34 <sub>16</sub>
15 <sub>16</sub>	The 6th character of sub-ROM number	'5' = 35 <sub>16</sub>
16 <sub>16</sub>	The 7th character of sub-ROM number	'6' = 36 <sub>16</sub>
16 <sub>16</sub>	The 7th character of sub-ROM number	'7' = 37 <sub>16</sub>
17 <sub>16</sub>	The 8th character of sub-ROM number	'8' = 38 <sub>16</sub>
		'9' = 39 <sub>16</sub>

The submitted floppy disk must be 3.5-inch 2HD type and DOS/V format. And the number of the mask files must be 1 in one floppy disk.
