ISL75051ASEH

Total Dose Test Report

TR066
Rev.0.00
May 29, 2018

Introduction

This report documents the results of Low Dose Rate (LDR) and High Dose Rate (HDR) total dose testing of the ISL75051ASEH low dropout regulator. The results also include post-irradiation high temperature biased annealing. The tests were conducted to assess the total dose hardness of the part and to determine any dose rate, bias, or anneal sensitivity. Parts were irradiated under bias and with all pins grounded - at LDR to 100krad(Si) and at HDR to 150krad(Si), followed by high temperature biased anneals. The ISL75051ASEH is rated at 100krad(Si) at high dose rate (50-300rad(Si)/s) and at 50krad(Si) at LDR (0.01rad(Si)/s) and is acceptance tested on a wafer-by-wafer basis to these limits.

Product Description

The ISL75051ASEH is a radiation hardened, low voltage, high current single output Low Dropout (LDO) linear voltage regulator specified for a 3.0A continuous output current. The device operates over an input voltage range of 2.2V to 6.0V and provides output voltages of 0.8V to 5.0V, with the output voltage adjusted by an external resistor divider network. Dropout voltages as low as 65mV can be achieved using the device.

The OCP pin allows the short-circuit output current limit threshold to be programmed by a resistor from the OCP pin to GND. The OCP setting range is 0.5A minimum to 8.5A maximum. The resistor sets the constant current threshold for the output under fault conditions. The thermal shutdown disables the output if the device temperature exceeds the specified value. It subsequently enters an ON/OFF cycle until the fault is removed. The ENABLE feature allows the part to be placed into a low current shutdown mode that typically draws about 10µA.

The ISL75051ASEH is implemented in the submicron P6 power management process, with 0.6µm minimum ground rules and three layers of interconnect. Active devices include low voltage CMOS and high voltage DMOS devices as well as complementary bipolar junction transistors. This process is in volume production under MIL-PRF-38535 certification and is used for a wide range of commercial power management devices.

The pinout configuration for the ISL75051ASEH is shown in Figure 1 on page 2, with the pin descriptions shown in Table 1 on page 2. The part is available in an 18 Ld CDFP package.

Note: The ESD triangular mark indicates Pin #1. It is a part of the device marking and is placed on the lid in the quadrant where Pin #1 is located.

Figure 1. ISL75051ASEH Pin Configuration

Table 1. ISL75051ASEH Pin Descriptions

Pin Number	Pin Name	Description
1	GND	GND pin.
2, 3, 4, 5, 6, 7	VOUT	Output voltage pins.
8	VADJ	The VADJ pin allows V_{OUT} to be programmed with an external resistor divider.
9	BYP	To filter the internal reference, connect a 0.1µF capacitor from the BYP pin to GND.
10	EN	V_{IN} independent chip enable. TTL and CMOS compatible.
11	OCP	Allows the current limit to be programmed with an external resistor.
12, 13, 14, 15, 16, 17	VIN	Input supply pins.
18	PG	V_{OUT} in regulation signal. Logic low defines when V_{OUT} is not in regulation. Must be grounded if not used.
Top Lid	GND	The top lid is connected to the GND pin of the package.
Bottom Metal	-	The bottom E-pad is available only on the K18.E package and is not electrically connected.

1. Test Description

1.1 Irradiation Facilities

High dose rate testing was performed at 187.6rad(Si)/s using a Gammacell 220 industry standard irradiator located in the Renesas facility in Palm Bay, Florida. Low dose rate testing was performed at 0.01rad(Si)/s using the Renesas Palm Bay Hopewell Designs N40 panoramic irradiator. Both irradiators use PbAl spectrum hardening filters to shield the test board and devices under test against low energy secondary gamma radiation. Half of the samples were irradiated under bias and the other half were grounded during irradiation. Samples from both dose rates underwent post-irradiation anneal at 100°C for 168 hours in a small temperature chamber.

1.2 Test Fixturing

Figure 2 shows the configuration used for biased irradiation at both dose rates. Note that the part is biased at 6V.

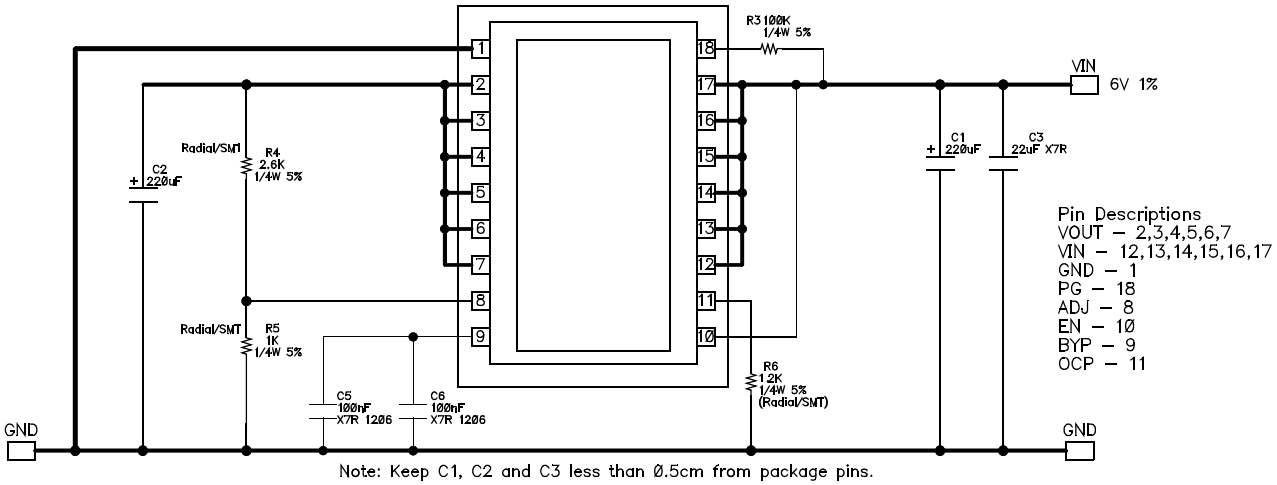

Figure 2. ISL75051ASEH TID Bias Schematic

1.3 Characterization Equipment and Procedures

All electrical testing was performed at room temperature outside the irradiator, using production Automated Test Equipment (ATE) with data-logging at each downpoint.

1.4 Experimental Matrix

Irradiation was performed in accordance with the guidelines of MIL-STD-883 Test Method 1019. The experimental matrix consisted of 24 samples irradiated at low dose rate under bias, 24 samples irradiated at low dose rate with all pins grounded, 12 samples irradiated at high dose rate under bias, and 12 samples irradiated at high dose rate with all pins grounded. All anneal samples were biased. Due to oven size limitations, only 24 samples could be annealed at a time, so 12 biased and 12 unbiased samples were randomly chosen from the LDR matrix to include in the biased anneal. Three control units were used for both types of irradiation.

The ISL75051ASEH samples were from wafer lot 1JLUB. All samples were packaged in the 18 lead ceramic flatpack package (package code K18.D). Samples were processed through the standard burn-in cycle before irradiation.

1.5 Downpoints

Downpoints for the LDR tests were 0, 10, 30, 50, 75, and 100krad(Si). Downpoints for the HDR tests were 0, 30, 50, 100, and 150krad(Si). Both exposures were followed by a 168 hour high temperature anneal at 100°C under bias.

2. Test Results

2.1 Attributes Data

Total dose testing of the ISL75051ASEH is complete. All tested parameters passed the SMD limits. Table 2 summarizes the results.

Table 2. ISL75051ASEH Total Dose Test Attributes Data

Dose Rate (rad(Si)/s)	Bias	Sample Size	Downpoint	Pass (Note 1)	Fail
0.01	Biased (Figure 2 on page 3)	24	Pre-irradiation	24	0
			10krad(Si)	24	0
			30krad(Si)	24	0
			50krad(Si)	24	0
			75krad(Si)	24	0
			100krad(Si)	24	0
			Anneal	12	0

			30krad(Si)	12	0
			50krad(Si)	12	0
			100krad(Si)	12	0
			150krad(Si)	12	0
			Anneal	12	0

Note:
1. ‘Pass’ indicates a sample that passes all SMD limits.

2.2 Key Parameter Listing

Table 3 lists 35 key selected parameters that indicate part performance. These parameters are plotted in Figures 3 through 37 (starting on page 6). All limits are taken from the ISL75051ASEH SMD; see the SMD 5962-11212 for further detail.

Table 3. ISL75051ASEH SMD Total Dose Key SMD Parameters (T_A = +25°C)

Figure	Parameter	Symbol	Limit, Low	Limit, High	Unit
3	DC output voltage accuracy, 0.52V out, 2.2V in, no load	V_{OUT}	0.512	0.528	V
4	DC output voltage accuracy, 0.52V out, 2.2V in, 3A load	V_{OUT}	0.512	0.528	V
5	DC output voltage accuracy, 0.52V out, 3.6V in, no load	V_{OUT}	0.512	0.528	V

24	DC input line regulation, 1.5V out			3.50	mV
25	DC input line regulation, 1.8V out			3.50	mV
26	DC input line regulation, 5.0V out			20.0	mV
27	DC output load regulation, 1.5V out		-4.00	-0.10	mV
28	DC output load regulation, 1.8V out		-4.80	-0.05	mV
29	DC output load regulation, 5.0V out		-15.0	-0.05	mV
30	Feedback input current, V_{ADJ} = 0.5V			1.00	µA
31	Ground pin current, 1.5V out, 2.2V in, no load	I_Q		13.0	mA
32	Ground pin current, 5.0V out, 6.0V in, no load	I_Q		19.0	mA
33	Ground pin current, 1.5V out, 2.2V in, 3A load	I_Q		14.0	mA
34	Ground pin current, 5.0V out, 6.0V in, 3A load	I_Q		20.0	mA
35	Dropout voltage, 2.5V out, 1A load	V_{DO}		100	mV
36	Dropout voltage, 2.5V out, 2A load	V_{DO}		200	mV
37	Dropout voltage, 2.5V out, 3A load	V_{DO}		300	mV

2.3 Key Parameter Variables Data

The plots in Figures 3 through 37 illustrate the TID response of key selected SMD parameters outlined in "Key Parameter Listing" on page 5. The plots show the average tested values of the parameters as a function of total dose and high temperature biased anneal for each of the irradiation conditions, Biased and Grounded, at Low Dose Rate (LDR) and High Dose Rate (HDR). For example, the legend LDR_Bias indicates the average LDR response for Biased parts. On the x-axis, along with the total dose, PA_L and PA_H represent the Post-Anneal LDR and HDR points, respectively. The plots also include error bars at each downpoint, representing the minimum and maximum measured values of the samples, although in some plots the error bars might not be visible due to their values compared to the scale of the graph.

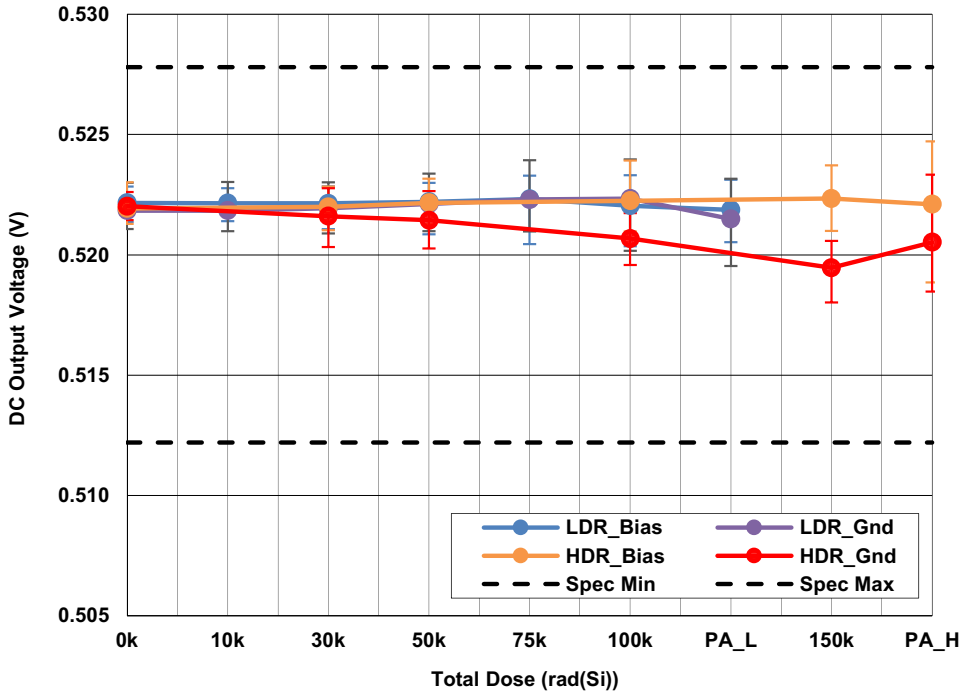

Figure 3. ISL75051ASEH DC output voltage accuracy (V_{OUT}), 0.52V output, 2.2V input, no load, as a function of total dose irradiation at LDR and at HDR for biased and grounded configurations and subsequent high temperature anneals. The error bars represent the minimum and maximum measured values. The post-irradiation SMD limits are 0.512V minimum and 0.528V maximum.

Figure 4. The error bars represent the minimum and maximum measured values. The post-irradiation SMD limit is 300mV maximum.

3. Discussion and Conclusion

We report the results of low and high dose rate total dose tests of the ISL75051ASEH low dropout regulator. Both irradiations were followed by a 168-hour anneal at 100°C under bias. All tested SMD parameters passed at all downpoints. No dose rate, bias, or anneal sensitivity was observed. "Attributes Data" on page 4 summarizes the attributes data for the test. "Key Parameter Listing" on page 5 summarizes selected key parameters for the part. Finally, "Key Parameter Variables Data" on page 6 provides plots of the total dose and anneal response for the selected parameters.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: “Standard” and “High Quality”. The intended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below.

   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

   Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user’s manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user’s manuals, application notes, “General Notes for Handling and Using Semiconductor Devices” in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

(Rev.4.0-1 November 2017)
