

Description

The ICS556-04 is a low-skew, crystal input compatible clock buffer with oscillator. This device offers the lowest skew.

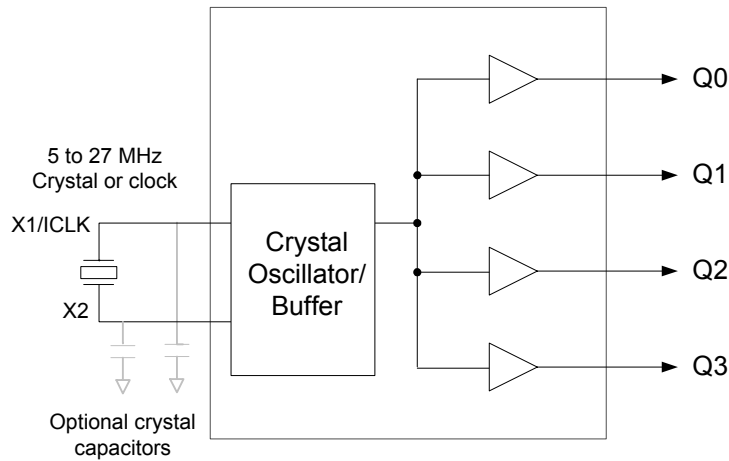

See the ICS552-02 for a 1-to-8 low skew buffer. For more than eight outputs see the MK74CBxxx Buffalo™ series of clock drivers.

IDT makes many non-PLL and PLL-based low-skew output devices. Contact IDT for all of your clocking needs.

Features

- Extremely low-skew outputs (50 ps maximum)
- Packaged in 8-pin SOIC
- Operating voltages of 2.5 to 5.0 V
- Low-power CMOS technology
- Industrial temperature range
- Pb (lead) free package

Pin Descriptions

Pin Number	Pin Name	Pin Type	Pin Description
1	VDD	Power	Connect to +2.5 V, +3.3 V or +5.0 V.
2	X1/ICLK	Input	Crystal or clock input (5 V tolerant input). Connect to 5 to 27 MHz input.
3	X2	Input	Connect to a fundamental mode crystal. Leave open for clock input.
4	GND	Power	Connect to ground.
5	Q1	Output	Clock Output 1.
6	Q2	Output	Clock Output 2.
7	Q3	Output	Clock Output 3.
8	Q4	Output	Clock Output 3.

External Components

A minimum number of external components are required for proper operation. A decoupling capacitor of 0.01 μ F should be connected between VDD on pin 1 and GND on pin 4, as close to the device as possible. A 33 Ω series terminating resistor may be used on each clock output if the trace is longer than 1 inch.

To achieve the low output skew that the ICS556-04 is capable of, careful attention must be paid to board layout. Essentially, all four outputs must have identical terminations, identical loads, and identical trace geometries. If not, the output skew will be degraded. For example, using a 30 Ω series termination on one output (with 33 Ω on the others) will cause at least 15 ps of skew.

Crystal Information

The crystal used should be a fundamental mode (do not use third overtone), parallel resonant. Crystal capacitors should be connected from pins X1 to ground and X2 to ground to optimize the initial accuracy. The value of these capacitors is given by the following equation:

$$\text{Crystal caps (pF)} = (\text{CL} - 6) \times 2$$

In the equation, CL is the crystal load capacitance. So, for a crystal with a 16 pF load capacitance, two 20 pF [(16-6) x 2] capacitors should be used.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS556-04. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Rating
