

**Description**

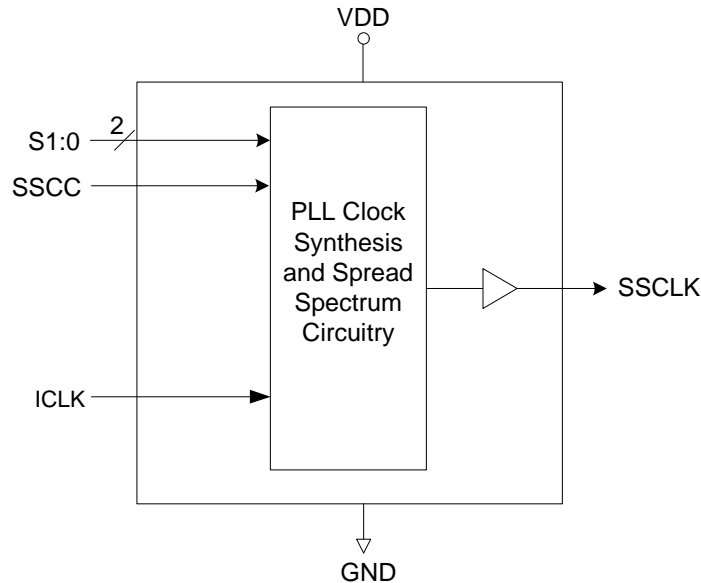

The IDT5V50013 generates a low EMI output clock from a clock input. The part is designed to dither the LCD interface clock for PDAs, printers, scanners, modems, copiers, and others. Using IDT’s proprietary mix of analog and digital Phase-Locked Loop (PLL) technology, the device spreads the frequency spectrum of the output, reducing the frequency amplitude peaks by several dB.

IDT offers many other clocks for computers and computer peripherals. Consult IDT when you need to remove crystals and oscillators from your board.

**Features**

- Packaged in 8-pin SOIC
- Provides a spread spectrum output clock
- 50 MHz to 140 MHz operation
- Accepts a clock input (provides same frequency dithered output)
- Center spread modulation
- Peak reduction by 8 dB to 16 dB typical on 3rd through 19th odd harmonics
- Low EMI feature can be disabled
- Operating voltage of 3.3 V
- Advanced, low-power CMOS process

**Block Diagram**

## Pin Assignment

## Spread Direction and Percentage Select Table

S1 Pin 6	S0 Pin 7	Spread Direction	Spread Percentage
0	0	Center	±0.5
0	1	Center	±1.0
1	0	Center	±1.5
1	1	Center	±2.0

0 = connect to GND  
1 = connect directly to VDD

## Pin Descriptions

Pin Number	Pin Name	Pin Type	Pin Description
1	ICLK	Input	Connect to a 50-140 MHz clock input.
2	VDD	Power	Connect to +3.3 V.
3	GND	Power	Connect to ground.
4	SSCLK	Output	Clock output with spread spectrum.
5	SSCC	Input	Spread spectrum enable/disable function. SSCC function is enabled when input is high and disabled when input is low. This pin is pulled high internally.
6	S1	Input	Function select 1 input. Selects spread amount and direction per table above. Internal pull-down.
7	S0	Input	Function select 0 input. Selects spread amount and direction per table above. Internal pull-down.
8	VDD	Power	Connect to +3.3 V.

## External Components

The IDT5V50013 requires a minimum number of external components for proper operation.

### Decoupling Capacitor

A decoupling capacitor of  $0.01\mu\text{F}$  must be connected between VDD and GND on pins 2 and 3, as close to these pins as possible. For optimum device performance, the decoupling capacitor should be mounted on the component side of the PCB. Avoid the use of vias in the decoupling circuit.

### Series Termination Resistor

When the PCB trace between the clock output and the load is over 1 inch, series termination should be used. To series terminate a  $50\Omega$  trace (a commonly used trace impedance) place a  $33\Omega$  resistor in series with the clock line, as close to the clock output pin as possible. The nominal impedance of the clock output is  $20\Omega$ .

## PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

- 1) The  $0.01\mu\text{F}$  decoupling capacitor should be mounted on the component side of the board as close to the VDD pin as possible. No vias should be used between the decoupling capacitor and VDD pin. The PCB trace to VDD pin should be kept as short as possible, as should the PCB trace to the ground via.
- 2) To minimize EMI, the  $33\Omega$  series termination resistor (if needed) should be placed close to the clock output.
- 3) An optimum layout is one with all components on the same side of the board, minimizing vias through other signal layers. Other signal traces should be routed away from the IDT5V50013. This includes signal traces just underneath the device, or on layers adjacent to the ground plane layer used by the device.

## Spread Spectrum Profile

The IDT5V50013 low EMI clock generator uses an optimized frequency slew rate algorithm to facilitate down stream tracking of zero delay buffers and other PLL devices. The frequency modulation amplitude is constant with variations of the input frequency.

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the IDT5V50013. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Rating
Supply Voltage, VDD	7 V
All Inputs and Outputs	-0.5 V to VDD+0.5 V
Ambient Operating Temperature	0 to +70° C
Storage Temperature	-65 to +150° C
Junction Temperature	125° C
Soldering Temperature	260° C

## Recommended Operation Conditions

Parameter	Min.	Typ.	Max.	Units
Ambient Operating Temperature	0		+70	°C
Power Supply Voltage (measured in respect to GND)	+3.0		3.63	V

## DC Electrical Characteristics

Unless stated otherwise, **VDD = 3.3 V**, Ambient Temperature 0 to +70° C

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Operating Voltage	VDD		2.97	3.3	3.63	V
Supply Current	IDD	ICLK=65 MHz, Note 1		17	20	mA
Input High Voltage	V <sub>IH</sub>	S1: S0	2.0			V
Input Low Voltage	V <sub>IL</sub>	S1: S0			0.8	V
Output High Voltage	V <sub>OH</sub>	I <sub>OH</sub> = -6 mA	2.4			V
		I <sub>OH</sub> = -20 mA	2.0			V
Output Low Voltage	V <sub>OL</sub>	I <sub>OL</sub> = 6 mA			0.4	V
		I <sub>OL</sub> = 20 mA			1.2	V
Input Capacitance	C <sub>IN1</sub>	All inputs	3	4	5	pF
Pull-down Resistance	R <sub>PD</sub>	S1, S0		240		kΩ
Pull-up Resistance	R <sub>PU</sub>	SSCC		240		kΩ

**Note 1:** CL = 15 pF.

## AC Electrical Characteristics

Unless stated otherwise, **VDD = 3.3 V**, Ambient Temperature 0 to +70° C

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Input Clock Frequency			50		140	MHz
Output Clock Frequency			50		140	MHz
Output Clock Duty Cycle		All outputs	45	50	55	%
Cycle to cycle Jitter		ICLK=50 MHz, SS on		100	150	ps
		ICLK=140 MHz, SS on		100	150	ps
Output Rise Time	t <sub>R</sub>	20% to 80%, CL=15 pF, 100 MHz		0.9		ns
Output Fall Time	t <sub>F</sub>	80% to 20%, CL=15 pF, 100 MHz		0.9		ns
Modulation Frequency		ICLK=70 MHz		30		kHz

## Thermal Characteristics for 8SOIC

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Units
Thermal Resistance Junction to Ambient	$\theta_{JA}$	Still air		150		°C/W
	$\theta_{JA}$	1 m/s air flow		140		°C/W
	$\theta_{JA}$	3 m/s air flow		120		°C/W
Thermal Resistance Junction to Case	$\theta_{JC}$			40		°C/W
Thermal Resistance Junction to Top of Case	$\Psi_{JT}$	Still air		20		°C/W

## Marking Diagram (8SOIC)

### Notes:

1. YYWW or YWW is the digits of the year and week that the part was assembled.
2. "\$" is the assembly mark code.
3. "G" designates RoHS compliant package.
4. "#" is the lot code.
5. Bottom marking: country of origin if not USA.

## Package Outline and Package Dimensions (8-pin SOIC, 150 Mil. Body)

Package dimensions are kept current with JEDEC Publication No. 95

## Ordering Information

Part / Order Number	Marking	Shipping Packaging	Package	Temperature
5V50013DCG	see page 6	Tubes	8-pin SOIC	0 to +70° C
5V50013DCG8		Tape and Reel	8-pin SOIC	0 to +70° C

"G" after the two-letter package code denotes Pb-Free configuration, RoHS compliant.
