

GENERAL DESCRIPTION

The 87974I is a low skew, low jitter 1-to-15 LVCMOS/LVTTL Clock Generator/Zero Delay Buffer. The device has a fully integrated PLL and three banks whose divider ratios can be independently controlled, providing output frequency relationships of 1:1, 2:1, 3:1, 3:2, 3:2:1. In addition, the external feedback connection provides for a wide selection of output-to-input frequency ratios. The CLK0 and CLK1 pins allow for redundant clocking on the input and dynamically switching the PLL between two clock sources.

Guaranteed low jitter and output skew characteristics make the 87974I ideal for those applications demanding well defined performance and repeatability.

FEATURES

- Fully integrated PLL
- Fifteen single ended 3.3V LVCMOS/LVTTL outputs
- Two LVCMOS/LVTTL clock inputs for redundant clock applications
- CLK0 and CLK1 accepts the following input levels: LVCMOS/LVTTL
- Output frequency range: 8.33MHz to 125MHz
- VCO range: 200MHz to 500MHz
- External feedback for "zero delay" clock regeneration
- Cycle-to-cycle jitter: $\pm 100\text{ps}$ (typical)
- Output skew: 350ps (maximum)
- 3.3V operating supply
- -40°C to 85°C ambient operating temperature
- Available in lead-free RoHS-compliant package

TABLE 1. PIN DESCRIPTIONS

Number	Name	Type		Description
1, 15, 19, 24, 30, 35, 39, 43, 47, 51	GND	Power		Power supply ground.
2	nMR/OE	Input	Pullup	Active HIGH outputs enabled (active). When LOW, outputs are disabled (High-impedance state) and reset of the device. During reset/output disable the PLL feedback loop is open and the internal VCO is tied to its lowest frequency. The 87974I requires reset after any loss of PLL lock. Loss of PLL lock may occur when the external feedback path is interrupted. The length of the reset pulse should be greater than one reference clock cycle (CLKx)
3	CLK_EN	Input	Pullup	Synchronizing clock enable. When HIGH, clock outputs QAx:QCx are enabled. When LOW, clock outputs QAx:QCx are low. LVCMOS / LVTTTL interface levels.
4	SEL_B	Input	Pulldown	Selects divide value for Bank B output as described in Table 3D. LVCMOS / LVTTTL interface levels.
5	SEL_C	Input	Pulldown	Selects divide value for Bank C output as described in Table 3D. LVCMOS / LVTTTL interface levels.
6	PLL_SEL	Input	Pullup	Selects between the PLL and the reference clock as the input to the dividers. When HIGH, selects PLL. When LOW, selects the reference clock. LVCMOS / LVTTTL interface levels.
7	SEL_A	Input	Pulldown	Selects divide value for Bank A output as described in Table 3D. LVCMOS / LVTTTL interface levels.
8	CLK_SEL	Input	Pulldown	Clock select input. When HIGH, selects CLK1. When LOW, selects CLK0. LVCMOS / LVTTTL interface levels.
9	CLK0	Input	Pulldown	Reference clock input. LVCMOS / LVTTTL interface levels.
10	CLK1	Input	Pullup	Reference clock input. LVCMOS / LVTTTL interface levels.
11, 27, 42	nc	Unused		No connect.
12	V _{DD}	Power		Core supply pin.
13	V _{DDA}	Power		Analog supply pin.
14, 20	FB_SEL0, FB_SEL1	Input	Pulldown	Selects divide value for Bank feedback output as described in Table 3E. LVCMOS / LVTTTL interface levels.
16, 18, 21, 23, 25	QA4, QA3, QA2, QA1, QA0	Output		Bank A clock outputs. 7Ω typical output impedance. LVCMOS / LVTTTL interface levels.
17, 22, 26	V _{DDOA}	Power		Output supply pins for Bank A clock outputs.
28	V _{DDOQB}	Power		Output supply pin for QFB clock output.
29	QFB	Output		Clock output. LVCMOS / LVTTTL interface levels.
31	FB_IN	Input	Pullup	Feedback input to phase detector for generating clocks with “zero delay”. Connect to pin 29. LVCMOS / LVTTTL interface levels.
32, 34, 36, 38, 40	QB4, QB3, QB2, QB1, QB0	Output		Bank B clock outputs. 7Ω typical output impedance. LVCMOS / LVTTTL interface levels.
33, 37, 41	V _{DDOB}	Power		Output supply pins for Bank B clock outputs.
44, 46, 48, 50	QC3, QC2, QC1, QC0	Output		Bank C clock outputs. 7Ω typical output impedance. LVCMOS / LVTTTL interface levels.
45, 49	V _{DDOC}	Power		Output supply pins for Bank C clock outputs.
52	VCO_SEL	Input	Pulldown	Selects VCO ÷ 4 when HIGH. Selects VCO ÷ 2 when LOW. LVCMOS / LVTTTL interface levels.

NOTE: and refer to internal input resistors. See Table 2, Pin Characteristics, for typical values.

TABLE 2. PIN CHARACTERISTICS

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, V_{DD}	4.6V
Inputs, V_I	-0.5V to $V_{DD} + 0.5V$
Outputs, V_O	-0.5V to $V_{DDO} + 0.5V$
Package Thermal Impedance, θ_{JA}	73.2°C/W (0 lfm)
Storage Temperature, T_{STG}	-65°C to 150°C

NOTE: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

TABLE 4A. POWER SUPPLY DC CHARACTERISTICS, $V_{DD} = V_{DDA} = V_{DDOx} = 3.3V \pm 5\%$, $T_A = -40^\circ\text{C}$ TO 85°C

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
V_{DD}	Core Supply Voltage		3.135	3.3	3.465	V

NOTE 1: Outputs terminated with 50 Ω to $V_{DDOx}/2$.

TABLE 5. AC CHARACTERISTICS, $V_{DD} = V_{DDA} = V_{DDOX} = 3.3V \pm 5\%$, $T_A = -40^{\circ}C$ TO $85^{\circ}C$

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
f_{MAX}	Output Frequency	$Qx_{, \pm 2}, VCO_{, \pm 2}$			125	MHz
		$Qx_{, \pm 4}, VCO_{, \pm 2}$			63	MHz
		$Qx_{, \pm 6}, VCO_{, \pm 2}$			42	MHz
f_{VCO}	PLL VCO Lock Range; NOTE 5		200		500	MHz
t_{PD}	SYNC to Feedback Propagation Delay; NOTE 2, 5	PLL_SEL = 3.3V, $f_{REF} = 50MHz$	-250		100	ps
$tsk(o)$	Output Skew; NOTE 4, 5	Measured on rising edge at $V_{DDO}/2$			350	ps
$t_{jit(cc)}$	Cycle-to-Cycle Jitter; NOTE 5, 6			± 100		ps
t_L	PLL Lock Time				10	mS
t_R / t_F	Output Rise/Fall Time	0.8V to 2.0V	0.15		1.5	ns
t_{PW}	Output Pulse Width		$t_{Period}/2 - 800$	$t_{Period}/2 \pm 500$	$t_{Period}/2 + 800$	ps
t_{EN}	Output Enable Time		2		10	ns
t_{DIS}	Output Disable Time		2		10	ns

All parameters measured at f_{MAX} unless noted otherwise.

NOTE 1: Measured from the $V_{DD}/2$ point of the input to the $V_{DDOX}/2$ of the output.

NOTE 2: Defined as the time difference between the input reference clock and the average feedback input signal when the PLL is locked and the input reference frequency is stable.

NOTE 3: Defined as skew within a bank with equal load conditions.

NOTE 4: Defined as skew between outputs at the same supply voltage and with equal load conditions.

Measured at $V_{DDOX}/2$.

NOTE 5: This parameter is defined in accordance with JEDEC Standard 65.

NOTE 6: Measured as peak-to-peak.

APPLICATION INFORMATION

POWER SUPPLY FILTERING TECHNIQUES

As in any high speed analog circuitry, the power supply pins are vulnerable to random noise. The 87974I provides separate power supplies to isolate any high switching noise from the outputs to the internal PLL. V_{DD} , V_{DDA} , and V_{DDOX} should be individually connected to the power supply plane through vias, and bypass capacitors should be used for each pin. To achieve optimum jitter performance, power supply isolation is required. *Figure 1* illustrates how a 10Ω resistor along with a 10μF and a .01μF bypass capacitor should be connected to each V_{DDA} pin. The 10Ω resistor can also be replaced by a ferrite bead.

FIGURE 1. POWER SUPPLY FILTERING

RECOMMENDATIONS FOR UNUSED INPUT AND OUTPUT PINS

INPUTS:

CLK INPUT:

For applications not requiring the use of a clock input, it can be left floating. Though not required, but for additional protection, a 1kΩ resistor can be tied from the CLK input to ground.

LVC MOS CONTROL PINS:

All control pins have internal pull-ups or pull-downs; additional resistance is not required but can be added for additional protection. A 1kΩ resistor can be used.

OUTPUTS:

LVC MOS OUTPUT:

All unused LVC MOS output can be left floating. We recommend that there is no trace attached.

LAYOUT GUIDELINE

The schematic of the 87974I layout example used in this layout guideline is shown in *Figure 2A*. The 87974I recommended PCB board layout for this example is shown in *Figure 2B*. This layout example is used as a general guideline. The layout in the

actual system will depend on the selected component types, the density of the components, the density of the traces, and the stack up of the P.C. board.

FIGURE 2A. 87974I LVC MOS/LVTTL ZERO DELAY BUFFER SCHEMATIC EXAMPLE

The following component footprints are used in this layout example:

All the resistors and capacitors are size 0603.

POWER AND GROUNDING

Place the decoupling capacitors as close as possible to the power pins. If space allows, placement of the decoupling capacitor on the component side is preferred. This can reduce unwanted inductance between the decoupling capacitor and the power pin caused by the via.

Maximize the power and ground pad sizes and number of vias capacitors. This can reduce the inductance between the power and ground planes and the component power and ground pins.

The RC filter consisting of R7, C11, and C16 should be placed as close to the V_{DDA} pin as possible.

CLOCK TRACES AND TERMINATION

Poor signal integrity can degrade the system performance or cause system failure. In synchronous high-speed digital systems, the clock signal is less tolerant to poor signal integrity than other signals. Any ringing on the rising or falling edge or excessive ring back can cause system failure. The shape of the

trace and the trace delay might be restricted by the available space on the board and the component location. While routing the traces, the clock signal traces should be routed first and should be locked prior to routing other signal traces.

- The differential 50Ω output traces should have same length.
- Avoid sharp angles on the clock trace. Sharp angle turns cause the characteristic impedance to change on the transmission lines.
- Keep the clock traces on the same layer. Whenever possible, avoid placing vias on the clock traces. Placement of vias on the traces can affect the trace characteristic impedance and hence degrade signal integrity.
- To prevent cross talk, avoid routing other signal traces in parallel with the clock traces. If running parallel traces is unavoidable, allow a separation of at least three trace widths between the differential clock trace and the other signal trace.
- Make sure no other signal traces are routed between the clock trace pair.
- The series termination resistors should be located as close to the driver pins as possible.

REVISION HISTORY SHEET				
Rev	Table	Page	Description of Change	Date
A		10 & 11	Added Layout Guideline and PCB Board Layout.	4/2/02
A		3	Added simplified block diagram.	4/4/02
A	T7	12	Revised Package Outline drawing. Corrected Package Dimensions table to correspond with the Package Outline drawing. Update format throughout datasheet.	11/15/02
B	T1	4	Pin Description table - updated nMR/OE and V_{DDOX} pin descriptions.	3/20/03
	T4A	6	3V Power Supply table - changed V_{DD} parameter to "Core..." from "Positive...". Changed I_{DD} max. limit from 105mA max. to 118mA max., and I_{DDOX} from 20mA max. to 22mA max.	
B	T2	5	Pin Characteristics Table - changed C_{IN} 8pF max. to 4pF typical.	5/15/03
	T3E	5	FB Select Function Table - switched FB_SELx headings, FB_SEL1 heading is in column 1, FB_SEL0 heading is in column 2.	
B	T2	5	Pin Characteristics Table - added R_{OUT} , Output Impedance row.	7/9/03
		12	Revised Package Outline.	
C	T4A	6	Change from die rev. A to B on part marking throughout data sheet.	7/23/03
			Change max. temperature to 70°C down from 85°C throughout data sheet. Power Supply DC Characteristics table - adjusted: V_{DDA} from 3.135V min. to 2.9375V min., I_{DD} from 118mA max. to 125mA max., and I_{DDOX} from 22mA max. to 25mA max.	
D	T4A	6	Through out the data sheet the maximum temperature was changed from 70°C to 85°C. Power Supply DC Characteristics Table - I_{DD} changed from 125mA max. to 121mA max. and I_{DDOX} changed from 25mA max. to 24mA max.	8/4/03
D		2 & 3	Swaped labels for FB_SEL0 and FB_SEL1 in the Block Diagram and Simplified Block Diagram.	2/9/04
D	T3E	5	Corrected FB Select Function Table.	6/9/04
D	T8	13	Ordering Information Table - added Lead-Free part number.	10/11/04
D	T8	9	Added <i>Recommendations for Unused Input and Output Pins</i> .	1/19/06
		14	Ordering Information Table - part number and order number is now a revision C. Corrected lead-free part number and marking, and added lead-free note.	
E	T8	14	Updated datasheet's header/footer with IDT from ICS.	7/26/10
		16	Removed ICS prefix from Part/Order Number column. Added Contact Page.	
E	T1	4	Updated description of nMR/OE pin	04/18/13
E	T8	1	Removed ICS from part numbers where needed.	1/26/16
		14	Features section - removed reference to leaded packages. Ordering Information - removed quantity from tape and reel. Deleted LF note below the table. Updated header and footer.
