# **RENESAS** 19-Output Differential Zbuffer for PCIe Gen2/3 and QPI

# 9ZX21901C

# DATASHEET

# **General Description**

The 9ZX21901 is Intel DB1900Z Differential Buffer suitable for PCI-Express Gen3 or QPI applications. The part is backwards compatible to PCIe Gen1 and Gen2. A fixed external feedback maintains low drift for critical QPI applications. In bypass mode, the 9ZX21901 can provide outputs up to 400MHz.

# **Recommended Application**

• 19-output PCIe Gen3/QPI buffer with fixed feedback for Romley platforms

# **Output Features**

19 – 0.7V current mode differential HCSL output pairs

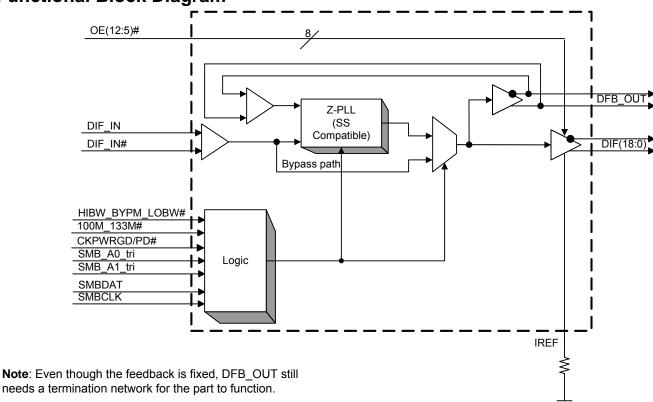

### **Key Specifications**

- Cycle-to-cycle jitter: < 50ps
- Output-to-output skew: <65ps</li>
- Input-to-output delay: Fixed at 0 ps
- Input-to-output delay variation: <50ps</li>
- Phase jitter: PCIe Gen3 < 1ps rms</li>
- Phase jitter: QPI 9.6GB/s < 0.2ps rms</li>

# **Functional Block Diagram**

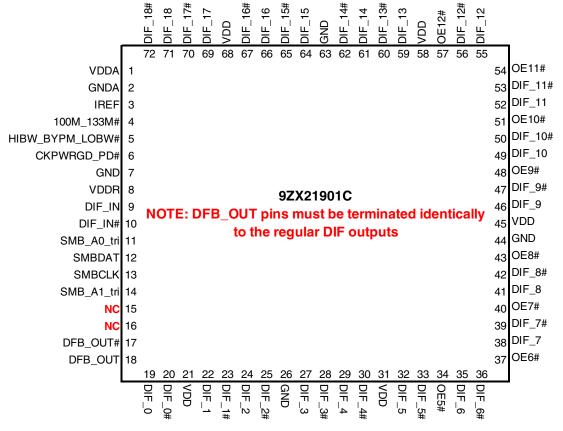

### Features/Benefits

- Fixed feedback path/ 0ps input-to-output delay
- 9 Selectable SMBus addresses; Multiple devices can share same SMBus segment
- 8 dedicated OE# pins; hardware control of outputs
- PLL or bypass mode; PLL can dejitter incoming clock
- Selectable PLL BW; minimizes jitter peaking in downstream PLL's
- Spread spectrum compatible; tracks spreading input clock for EMI reduction
- SMBus Interface; unused outputs can be disabled
- 100MHz & 133.33MHz PLL mode; legacy QPI support
- Undriven differential outputs in Power Down mode for maximum power savings

# **Pin Configuration**

72-pin VFQFPN

#### Functionality at Power Up (PLL Mode)

| 100M_133M# | DIF_IN<br>(MHz) | DIF_x<br>(MHz) |  |  |
|------------|-----------------|----------------|--|--|
| 1          | 100.00          | DIF_IN         |  |  |
| 0          | 133.33          | DIF_IN         |  |  |

### PLL Operating Mode Readback Table

| HiBW_BypM_LoBW# | Byte0, bit 7 | Byte 0, bit 6 |
|-----------------|--------------|---------------|
| Low (Low BW)    | 0            | 0             |
| Mid (Bypass)    | 0            | 1             |
| High (High BW)  | 1            | 1             |

#### **PLL Operating Mode**

| HiBW_BypM_LoBW# | MODE      |
|-----------------|-----------|
| Low             | PLL Lo BW |
| Mid             | Bypass    |
| High            | PLL Hi BW |

NOTE: PLL is OFF in Bypass Mode

#### **Tri-level Input Thresholds**

| Level | Voltage                           |
|-------|-----------------------------------|
| Low   | <0.8V                             |
| Mid   | 1.2 <vin<1.8v< td=""></vin<1.8v<> |
| High  | Vin > 2.2V                        |

**Power Connections** 

| Pin Nu                | umber      |              |
|-----------------------|------------|--------------|
| VDD                   | GND        | Description  |
| 1                     | 2          | Analog PLL   |
| 8                     | 7          | Analog Input |
| 21, 31, 45,<br>58, 68 | 26, 44, 63 | DIF clocks   |

#### 9ZX21901 SMBus Addressing

| Pi         | n          | SMBus Address    |
|------------|------------|------------------|
| SMB_A1_tri | SMB_A0_tri | (Rd/Wrt bit = 0) |
| 0          | 0          | D8               |
| 0          | М          | DA               |
| 0          | 1          | DE               |
| М          | 0          | C2               |
| М          | М          | C4               |
| М          | 1          | C6               |
| 1          | 0          | CA               |
| 1          | М          | CC               |
| 1          | 1          | CE               |

# **Pin Descriptions**

| PIN # | PIN NAME        | <b>PIN TYPE</b> | DESCRIPTION  |
|-------|-----------------|-----------------|--|
| 1     | VDDA            | PWR             | 3.3V power for the PLL core.   |
| 2     | GNDA            | GND             | Ground pin for the PLL core.   |
| 3     | IREF            | OUT             | This pin establishes the reference for the differential current-mode output pairs.<br>It requires a fixed precision resistor to ground. 4750hm is the standard value<br>for 1000hm differential impedance. Other impedances require different values.<br>See data sheet. |
| 4     | 100M_133M#      | IN              | Input to select operating frequency<br>1 = 100MHz, 0 = 133.33MHz   |
| 5     | HIBW_BYPM_LOBW# | IN              | Trilevel input to select High BW, Bypass or Low BW mode.<br>See PLL Operating Mode Table for Details.  |
| 6     | CKPWRGD_PD#     | IN              | 3.3V Input notifies device to sample latched inputs and start up on first high assertion, or exit Power Down Mode on subsequent assertions. Low enters Power Down Mode.  |
| 7     | GND             | GND             | Ground pin.  |
| 8     | VDDR            | PWR             | 3.3V power for differential input clock (receiver). This VDD should be treated as an analog power rail and filtered appropriately.   |
| 9     | DIF_IN          | IN              | 0.7 V Differential True input  |
| 10    | DIF_IN#         | IN              | 0.7 V Differential Complementary Input   |
| 11    | SMB_A0_tri      | IN              | SMBus address bit. This is a tri-level input that works in conjunction with the SMB_A1 to decode 1 of 9 SMBus Addresses.   |
| 12    | SMBDAT          | I/O             | Data pin of SMBUS circuitry, 5V tolerant   |
| 13    | SMBCLK          | IN              | Clock pin of SMBUS circuitry, 5V tolerant  |
| 14    | SMB_A1_tri      | IN              | SMBus address bit. This is a tri-level input that works in conjunction with the SMB_A0 to decode 1 of 9 SMBus Addresses.   |
| 15    | NC              | N/A             | No Connection.   |
| 16    | NC              | N/A             | No Connection.   |
| 17    | DFB_OUT#        | OUT             | Complementary half of differential feedback output, provides feedback signal to the PLL for synchronization with input clock to eliminate phase error.   |
| 18    | DFB_OUT         | OUT             | True half of differential feedback output, provides feedback signal to the PLL for synchronization with the input clock to eliminate phase error.  |
| 19    | DIF_0           | OUT             | 0.7V differential true clock output  |
| 20    | DIF_0#          | OUT             | 0.7V differential Complementary clock output   |
| 21    | VDD             | PWR             | Power supply, nominal 3.3V   |
| 22    | DIF_1           | OUT             | 0.7V differential true clock output  |
| 23    | DIF_1#          | OUT             | 0.7V differential Complementary clock output   |
| 24    | DIF_2           | OUT             | 0.7V differential true clock output  |
| 25    | DIF_2#          | OUT             | 0.7V differential Complementary clock output   |
| 26    | GND             | GND             | Ground pin.  |

TA =  $T_{COM}$  Supply Voltage VDD/VDDA = 3.3 V +/-5%, See Test Loads for Loading Conditions

<sup>1</sup>Guaranteed by design and characterization, not 100% tested in production. IREF = VDD/( $3xR_R$ ). For  $R_R = 475\Omega$  (1%),  $I_{REF} = 2.32mA$ .  $I_{OH} = 6 \times I_{REF}$  and  $V_{OH} = 0.7V$  @  $Z_O = 50\Omega$  (100 $\Omega$  differential impedance).

<sup>2</sup> Measured from differential waveform

<sup>3</sup> Slew rate is measured through the Vswing voltage range centered around differential 0V. This results in a +/-150mV window around differential 0V.

<sup>4</sup> Matching applies to rising edge rate for Clock and falling edge rate for Clock#. It is measured using a +/-75mV window centered on the average cross point where Clock rising meets Clock# falling. The median cross point is used to calculate the voltage thresholds the oscilloscope is to use for the edge rate calculations.

<sup>5</sup> Vcross is defined as voltage where Clock = Clock# measured on a component test board and only applies to the differential rising edge (i.e. Clock rising and Clock# falling).

<sup>6</sup> The total variation of all Vcross measurements in any particular system. Note that this is a subset of V\_cross\_min/max (V\_cross absolute) allowed. The intent is to limit Vcross induced modulation by setting V\_cross\_delta to be smaller than V\_cross absolute.

<sup>7</sup> Measured from single-ended waveform

<sup>8</sup> Measured with scope averaging off, using statistics function. Variation is difference between min and max.

TA = T<sub>COM</sub>. Supply Voltage VDD/VDDA = 3.3 V +/-5%, See Test Loads for Loading Conditions

### Notes for preceding table:

<sup>1</sup> Measured into fixed 2 pF load cap. Input to output skew is measured at the first output edge following the corresponding input.

<sup>2</sup> Measured from differential cross-point to differential cross-point. This parameter can be tuned with external feedback path, if present.

<sup>3</sup> All Bypass Mode Input-to-Output specs refer to the timing between an input edge and the specific output edge created by it.

<sup>4</sup> This parameter is deterministic for a given device

<sup>5</sup> Measured with scope averaging on to find mean value. DIF\_IN slew rate must be matched to DIF output slew rate.

<sup>6</sup>.t is the period of the input clock

<sup>7</sup> Measured as maximum pass band gain. At frequencies within the loop BW, highest point of magnification is called PLL jitter peaking.

<sup>8.</sup> Guaranteed by design and characterization, not 100% tested in production.

<sup>9</sup> Measured at 3 db down or half power point.

<sup>10</sup> Duty cycle distortion is the difference in duty cycle between the output and the input clock when the device is operated in bypass mode.

<sup>11</sup> Measured from differential waveform

<sup>1</sup> Applies to all outputs.

<sup>2</sup> See http://www.pcisig.com for complete specs

<sup>3</sup> Sample size of at least 100K cycles. This figures extrapolates to 108ps pk-pk @ 1M cycles for a BER of 1-12.

<sup>4</sup> Subject to final radification by PCI SIG.

<sup>5</sup> Calculated from Intel-supplied Clock Jitter Tool v 1.6.3

<sup>6</sup> For RMS figures, additive jitter is calculated by solving the following equation: (Additive jitter)<sup>2</sup> = (total jitter)<sup>2</sup> - (input jitter)<sup>2</sup>

### **Power Management Table**

| Inputs      |                    | Control Bit     | s/Pins  |                          | Outputs            |                      |              |
|-------------|--------------------|-----------------|---------|--------------------------|--------------------|----------------------|--------------|
| CKPWRGD_PD# | DIF_IN/<br>DIF_IN# | SMBus<br>EN bit | OE# Pin | DIF(5:12)/<br>DIF(5:12)# | Other DIF/<br>DIF# | DFB_OUT/<br>DFB_OUT# | PLL<br>State |
| 0           | Х                  | Х               | Х       | Hi-Z <sup>1</sup>        | Hi-Z <sup>1</sup>  | Hi-Z <sup>1</sup>    | OFF          |
|             |                    | 0               | Х       | Hi-Z <sup>1</sup>        | Hi-Z <sup>1</sup>  | Running              | ON           |
| 1           | Running            | 1               | 0       | Running                  | Running            | Running              | ON           |
|             |                    | 1               | 1       | Hi-Z <sup>1</sup>        | Running            | Running              | ON           |

NOTE: 1. Due to external pull down resistors, HI-Z results in Low/Low on the True/Complement outputs

### Clock Periods – Differential Outputs with Spread Spectrum Disabled

### Notes:

<sup>1</sup>Guaranteed by design and characterization, not 100% tested in production.

<sup>2</sup> All Long Term Accuracy specifications are guaranteed with the assumption that the input clock complies with CK420BQ/CK410B+ accuracy requirements (+/-100ppm). The 96Z61027 itself does not contribute to ppm error.

<sup>3</sup> Driven by SRC output of main clock, 100 MHz PLL Mode or Bypass mode

<sup>4</sup> Driven by CPU output of main clock, 133 MHz PLL Mode or Bypass mode

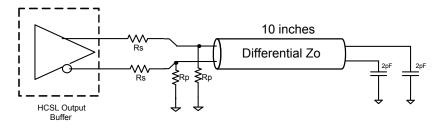

### **Thermal Characteristics**

| Parameter                              | Symbol | Conditions     | Min. | Тур. | Max. | Units |
|--|--------|----------------|------|------|------|-------|
| Thermal Resistance Junction to Ambient | θJA    | Still air      |      | 26.2 |      | °C/W  |
|  | θJA    | 1 m/s air flow |      | 23.1 |      | °C/W  |
|  | θJA    | 3 m/s air flow |      | 19.6 |      | °C/W  |
| Thermal Resistance Junction to Case    | θJC    |                |      | 10.4 |      | °C/W  |
| Thermal Resistance Junction to Board   | θJB    |                |      | 0.3  |      | °C/W  |

### **Differential Output Termination Table**

| DIF Zo (Ω) | Iref (Ω) | Rs $(\Omega)$ | Rp (Ω)       |

### General SMBus Serial Interface Information (see also 9ZX21901 SMBus Addressing on page 2)

### How to Write

- Controller (host) sends a start bit
- Controller (host) sends the write address XX<sub>(H)</sub>
- IDT clock will acknowledge
- Controller (host) sends the beginning byte location = N
- IDT clock will acknowledge
- Controller (host) sends the byte count = X
- IDT clock will acknowledge
- Controller (host) starts sending Byte N through Byte N+X-1
- IDT clock will acknowledge each byte one at a time
- Controller (host) sends a Stop bit

### Note: XX<sub>(H)</sub> is defined by SMBus Address select pins.

### How to Read

- Controller (host) will send a start bit
- Controller (host) sends the write address XX<sub>(H)</sub>
- IDT clock will acknowledge
- Controller (host) sends the beginning byte location = N
- IDT clock will acknowledge
- Controller (host) will send a separate start bit
- Controller (host) sends the read address YY<sub>(H)</sub>
- IDT clock will acknowledge
- IDT clock will send the data byte count = X
- IDT clock sends Byte N+X-1
- IDT clock sends Byte 0 through Byte X (if X<sub>(H)</sub> was written to Byte 8)
- Controller (host) will need to acknowledge each byte
- Controller (host) will send a not acknowledge bit
- Controller (host) will send a stop bit

### **Marking Diagram**

### Notes:

- 1. "LOT" is the lot sequence number.
- 2. "COO" denotes country of origin.
- 3. "YYWW" is the last two digits of the year and week that the part was assembled.
- 4. "LF" denotes RoHS compliant package.

### **Ordering Information**

| Part / Order Number | Shipping Package | Package       | Temperature |
|---------------------|------------------|---------------|-------------|
| 9ZX21901CKLF        | Trays            | 72-pin VFQFPN | 0 to +70°C  |
| 9ZX21901CKLFT       | Tape and Reel    | 72-pin VFQFPN | 0 to +70°C  |

# **Revision History**

| Rev. | Issue Date | Who | Description  | Page #  |
|------|------------|-----|--|---------|
| к    | 4/15/2013  |     | 1. Corrected typo in OE# Latency parameter; changed 1 min. to 3 max. cycles to 4 min. to 12 max. clocks.               | 5       |
| L    | 1/30/2015  |     | Updated package dimensions and outline drawing with NL72 SAWN version.   | Various |
| М    | 4/23/2015  | RDW | <ol> <li>Added marking diagram and associated notes.</li> <li>Re-created datasheet in latesrt IDT template.</li> </ol> | Various |
| Ν    | 11/19/2015 | RDW | Update Input Clock spec with new standardized table matching PCIe SIG input specs.                                     | 5       |
