

## DESCRIPTION

This document describes the specifications for the F0502 600MHz to 1000MHz dual path Sampling IF (SIF) Receiver used in Multi-mode, Multi-carrier BaseStation Receivers. Refer to the Part Number# Matrix below describing the frequency coverage of the complete series. This series is offered with high side or low side LO injection options for all UTRA bands and offers significantly better Noise and Distortion performance than currently available solutions. IF frequencies from 60MHz to 275MHz are supported.

The F0502 SIF provides 28.2dB gain and offers 47dB gain adjustment in 1dB steps and is designed to operate with a single 5V supply. Nominally, the device offers +44dBm Output IP3 using 480mA of I<sub>CC</sub>. Alternately one can configure the device in low current (LC) mode to reduce power consumption to less than 1.95 watts.

This device is packaged in a 10x10 68-pin TQFN with 50Ω single-ended RF input and 200Ω differential IF output impedances for ease of integration into the receiver lineup. The 200Ω differential IF output can easily be matched to 100Ω differential per the application drawing.

## COMPETITIVE ADVANTAGE

Renesas' Zero-Distortion™ mixer in combination with interstage filtering and Renesas' proprietary FlatNoise™ DVGA improves system SNR to the point where the external SAW filter can be eliminated. Both IP<sub>3o</sub> and NF are kept virtually flat while gain is backed off, enhancing SNR significantly under high level interferer conditions, and greatly benefiting 2G/3G/4G Multi-Carrier IF sampling receivers. In addition, total power consumption is reduced by 35% compared to conventional solutions.

- ✓ No external SAW is needed
- ✓ Reduced Power Consumption by 35%
- ✓ NF and OIP3 virtually flat for first 13dB gain reduction

The fast-settling, parallel mode gain step of 1.0 dB coupled with the excellent differential non-linearity allow for SNR to be maximized further by targeting the minimum necessary gain in small, accurate increments. The matched output does not require a terminating resistor, thus the gain and distortion performance are preserved when driving Bandpass Anti-Alias filters.

## FEATURES

- Dual Channel for Diversity / MIMO Systems
- Combines FlatNoise™ and Zero-Distortion™ technology
- 28.2dB Total Power Gain
- 47dB gain control range
- 1dB Gain Steps
- Ultra linear +44dBm IP<sub>3o</sub>
- Low NF: 9.6dB at G<sub>MAX</sub>
- 50Ω input impedance
- Matched 100Ω differential output impedance
- Ultra high +20.2dBm P1dB<sub>o</sub>
- Independent path standby mode
- Constant LO impedance in STBY mode
- 6 bit parallel control
- 60MHz to 275MHz IF frequency range
- Excellent 2<sup>nd</sup> Harmonic Rejection
- I<sub>CC</sub> = 480mA STD Mode, 390mA LC Mode
- 10 x 10 mm 68-pin VFQFPN package

## DEVICE BLOCK DIAGRAM

## PART NUMBER# MATRIX

Part#	RF Freq Range (MHz)	UTRA bands	IF Freq Range (MHz)	Typ. Gain (dB)	Injection
F0502	600 - 1000	5,6,8,12,13,14,17,18,19,20	60 - 275	28.2	Low & High Side
F0552	1710 - 2050	1,2,3,4,9,10,23,25,33,34,35,36,37,39	60 - 450	29	Low & High Side
F0562	2300 - 2700	7,38,40,41	60 - 450	29	Low & High Side

- 2 – Items in min/max columns that are not bold/italics are Guaranteed by Design Characterization using BOM2 components supporting 2:1 output impedance transformation to 100Ω

## TYPICAL OPERATING CONDITIONS (184 MHz IF CENTER)

Unless otherwise noted, the following conditions apply:

- Applications circuit for 100 $\Omega$  differential load with 184MHz +/- 40MHz BW into 2:1 transformer. See schematic in BOM section.
- Pout ~ +3dBm
- Measurement on Channel A
- P<sub>IN</sub> from -27dBm to -5dBm per tone (Gain Setting Adjusted to yield Pout ~ +3dBm)
- Tone Spacing = 800KHz
- Device configured in Standard Mode with High Side Injection
- T<sub>CASE</sub> = 25C, V<sub>CC</sub> = 5.00V, LO Power = 0dBm
- RF Frequency: 915MHz
- IF Frequency: 184MHz
- IF Transformer losses are de-embedded
- Input RF trace and connector losses are de-embedded
- Listed Temperatures are Case Temperature (T<sub>C</sub> = Case Temperature)
- Where noted, T<sub>A</sub> or T<sub>AMB</sub> = Ambient Temperature

**PACKAGE OUTLINE DRAWINGS**

The package outline drawings are located at the end of this document and are accessible from the Renesas website (see Ordering Information for POD links). The package information is the most current data available and is subject to change without revision of this document.

**PIN DIAGRAM**

**PIN DESCRIPTION**

Pin	Name	Function
1, 3, 15, 17, 25, 38, 40, 46, 61	VCC	Power Supply. Bypass to GND with capacitors shown in the Typical Application Circuit as close as possible to pin.
2, 4, 6, 12, 14, 16, 27, 37, 39, 42, 43, 48, 56, 59	GND	Ground these pins. These pins are internally tied to the exposed paddle.
5	RFIN_A	Main Channel RF Input. Internally matched to 50Ω. <b>DO NOT apply DC to this pin,</b>
7, 11, 24, 30, 31, 32, 34, 49, 52, 54, 55, 62	NC	No Connection. Not internally connected. OK to connect to VCC, or GND
8	TDD_A	Standby control for Channel A. Includes an internal pull-up resistor so leave as NC for Standby mode. Set this pin to low or GND for normal operation.
9	LCmode	Low_Current Mode. Includes an internal pull-up resistor so leave as NC for LC mode. Set this pin to low or GND for STD mode.
10	TDD_B	Standby control for Channel B. Includes an internal pull-up resistor so leave as NC for Standby mode. Set this pin to low or GND for normal operation.
13	RFIN_B	Diversity Channel RF Input. Internally matched to 50Ω. <b>DO NOT apply DC to this pin,</b>
18	B5	Parallel Gain Control Input - MSB
19	B4	Parallel Gain Control Input
20	B3	Parallel Gain Control Input
21	B2	Parallel Gain Control Input
22	B1	Parallel Gain Control Input
23	B0	Parallel Gain Control Input – LSB (1 dB step)
26	ISET_B	ChB VGA Icc set: Recommended resistor value = 3.48kΩ
28	IFOUT_B+	Channel B Differential Output +. Pull up to Vcc through an inductor
29	IFOUT_B-	Channel B Differential Output -. Pull up to Vcc through an inductor
33	MX_IF_BiasB	Connect the specified resistor for either Standard mode (40.2Ω) or LC mode (62Ω) from this pin to ground to set the bias for the Diversity IF amplifier. This is NOT a current set resistor.
35	MX_IFB+	Diversity Mixer Differential IF (+) Output. Connect a pullup inductor from this pin to VCC.
36	MX_IFB-	Diversity Mixer Differential IF (-) Output. Connect a pullup inductor from this pin to VCC.

**PIN DESCRIPTION (CONTINUED)**

41	LO1_ADJ	Connect the specified resistor for either Standard mode (91Ω ) or LC mode (180Ω ) from this pin to ground to set the LO common buffer Icc.
44	LO_IN	Local Oscillator Input. Connect the LO to this port through the recommended coupling capacitor.
45	LO_IN_RTN	Transformer ground return. Ground this pin close to the device
47	LO2_ADJ	Connect the specified resistor for either Standard mode (1.21kΩ) or LC mode (1.91kΩ) from this pin to ground to set the LO drive buffers Icc.
50	MX_IFA-	Diversity Mixer Differential IF (-) Output. Connect a pullup inductor from this pin to VCC.
51	MX_IFA+	Diversity Mixer Differential IF (+) Output. Connect a pullup inductor from this pin to VCC.
53	MX_IF_BiasA	Connect the specified resistor for either Standard mode (40.2Ω ) or LC mode (62Ω) from this pin to ground to set the bias for the Diversity IF amplifier. This is NOT a current set resistor.
57	IFOUT_A-	Channel A Differential Output -. Pull up to Vcc through an inductor
58	IFOUT_A+	Channel A Differential Output +. Pull up to Vcc through an inductor
60	ISET_A	ChA VGA Icc set: Recommended resistor value = 3.48kΩ
63	A0	Parallel Gain Control Input – LSB (1dB step)
64	A1	Parallel Gain Control Input
65	A2	Parallel Gain Control Input
66	A3	Parallel Gain Control Input
67	A4	Parallel Gain Control Input
68	A5	Parallel Gain Control Input - MSB
69	EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the noted RF performance.

### DIGITAL PIN VOLTAGE AND RESISTANCE VALUES

The following table provides open-circuit DC voltage referenced to ground and resistance values for each of the control pins listed.

Pin	Name	DC Voltage (volts)	Resistance (ohms)
8	TDD_A	5V	50kΩ to Vcc
9	LCmode	5V	50kΩ to Vcc
10	TDD_B	5V	50kΩ to Vcc
18 – 23	B5-B0	5V	50kΩ to Vcc
63 - 68	A0-A5	5V	50kΩ to Vcc

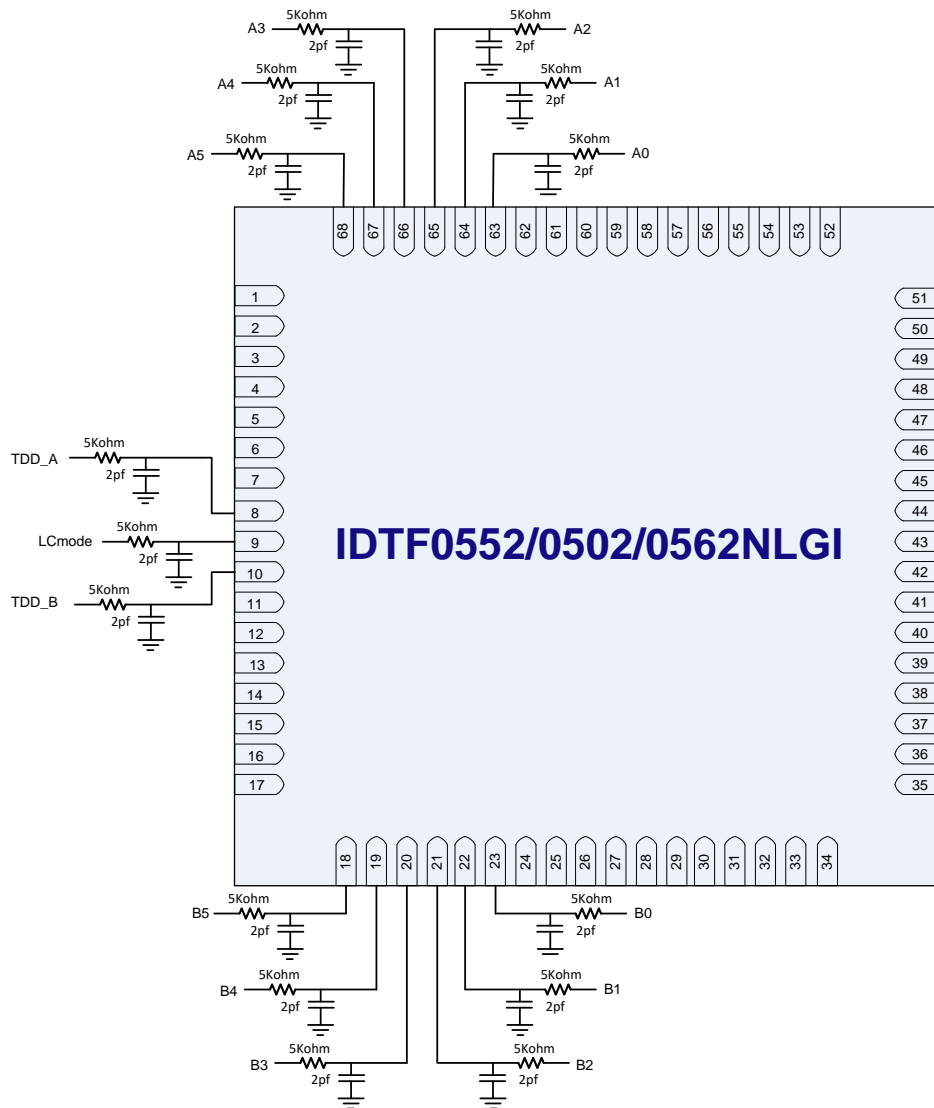

## APPLICATIONS INFORMATION

### Power Supplies

A common VCC power supply should be used for all pins requiring DC power. All supply pins should be bypassed with external capacitors to minimize noise and fast transients. Supply noise can degrade noise figure and fast transients can trigger ESD clamps and cause them to fail. Supply voltage change or transients should have a slew rate smaller than  $1V/20\mu s$ . In addition, all control pins should remain at 0V (+/-0.3V) while the supply voltage ramps or while it returns to zero.

### Control Pin Interface

If control signal integrity is a concern and clean signals cannot be guaranteed due to overshoot, undershoot, ringing, etc., provisions for an R-C circuit at the input of each control and data pin is recommended. This applies to pins 8, 9, 10, 18 - 23, and 63 - 68 as shown below.

**EVKIT AND TYPICAL APPLICATION SCHEMATIC**

The following schematic describes the recommended EVkit and applications circuit.

EVKIT PICTURE

## BOM 1 AND 2

Two BOMs are included: BOM1 supports the 4:1 output transformation from 200Ω to 50Ω used for production test and BOM2 supports the 2:1 output transformation from 200Ω to 100Ω used to generate the typical operating curve graphs.

- For Standard (STD) Mode, use resistor values in **RED** and short J2 LCMODE jumper (short pin to GND).
- For Low Current (LC) Mode, use resistor values in **BLUE** and open J2 LCMODE jumper (open pin).

**BOM1** includes components for 4:1 output transformation supporting production test (IF center frequency 184MHz)

4:1 Transformer, IF = 184MHz 8/13/14
