

## DESCRIPTION

This document describes the specifications for the F0562 2300MHz to 2700MHz dual path Sampling IF (SIF) Receiver used in Multi-mode, Multi-carrier BaseStation Receivers. Refer to the Part # Matrix below describing the frequency coverage of the complete series. This series is offered with high side or low side LO injection options for all UTRA bands and offers significantly better Noise and Distortion performance than currently available solutions. IF frequencies from 60MHz to 450MHz are supported.

The F0562 SIF provides 29dB gain and offers 47dB gain adjustment in 1dB steps designed to operate with a single 5V supply. Nominally, the device offers +44 dBm Output IP3 using 480mA of I<sub>CC</sub>. Alternately one can configure the device in low current (LC) mode to reduce power consumption to < 2 Watts.

This device is packaged in a 10 x 10 mm 68-pin Thin QFN with 50 ohm single-ended RF input and 200 ohm differential IF output impedances for ease of integration into the receiver lineup. The 200 ohm differential IF output can easily be matched to 100 ohms differential per the application drawing.

## COMPETITIVE ADVANTAGE

Renesas' Zero-Distortion™ mixer in combination with interstage filtering and Renesas' proprietary FlatNoise™ DVGA improves system SNR to the point where the external SAW filter can be eliminated. Both IP<sub>3o</sub> & NF are kept virtually flat while gain is backed off, enhancing SNR significantly under high level interferer conditions, and greatly benefiting 2G/3G/4G Multi-Carrier IF sampling receivers. In addition, total power consumption is reduced by 35% compared to conventional solutions.

- ✓ No external SAW is needed
- ✓ Reduced Power Consumption by 35%
- ✓ NF and OIP3 virtually flat for first 13dB gain reduction

The fast-settling, parallel mode gain step of 1.0dB coupled with the excellent differential non-linearity allow for SNR to be maximized further by targeting the minimum necessary gain in small, accurate increments. The matched output does not require a terminating resistor, thus the gain and distortion performance are preserved when driving Bandpass Anti-Alias filters.

## FEATURES

- Dual Path for Diversity Systems
- Combines FlatNoise™ and Zero-Distortion technologies
- 29dB Total Power Gain
- Ultra linear +44dBm IP<sub>3o</sub>
- Low NF: 9.9dB at G<sub>MAX</sub>
- 50 Ω input impedance
- Matched 100Ω differential output impedance
- Ultra high +19.8dBm P1dB<sub>o</sub>
- Independent path standby mode
- Constant LO impedance in STBY mode
- 47dB gain control range
- 6-bit parallel control
- 1dB Gain Steps
- 60MHz – 450MHz IF frequency range
- Excellent 2<sup>nd</sup> Harmonic Rejection
- I<sub>CC</sub> = 390mA LC Mode
- 10 x 10 mm 68-pin VFQFPN package

## ABSOLUTE MAXIMUM RATINGS

VCC to GND	-0.3V to +5.5V
A[5:0], B[5:0], TDD_A, TDD_B (STBY), LCMode	-0.3V to (VCC + 0.25V)
MX_IFA+, MX_IFA-, MX_IFB+, MX_IFB-	-0.3V to (VCC + 0.25V)
IFOUT_A+, IFOUT_A-, IFOUT_B+, IFOUT_B-	1V to (Vcc + 0.3V)
LO1_ADJ	+1V to +3V
LO2_ADJ	+2.1V to +4V
MX_IF_BiasA, MX_IF_BiasB	-0.3V to +0.3V
LO_IN, RFIN_A, RFIN_B	-0.3V to +0.3V
RF Input Power (RFIN_A, RFIN_B)	+20dBm
ISET_A, ISET_B to GND	-0.3V to +2.2V
Continuous Power Dissipation	2.5W
$\theta_{JA}$ (Junction – Ambient)	+25°C/W
$\theta_{JC}$ (Junction – Case) The Case is defined as the exposed paddle	+3°C/W
Operating Temperature Range (Case Temperature)	T <sub>C</sub> = -40°C to +105°C
Maximum Junction Temperature	150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s)	+260°C

*Stresses above those listed above may cause permanent damage to the device. Functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.*

**SPECIFICATION NOTES:**

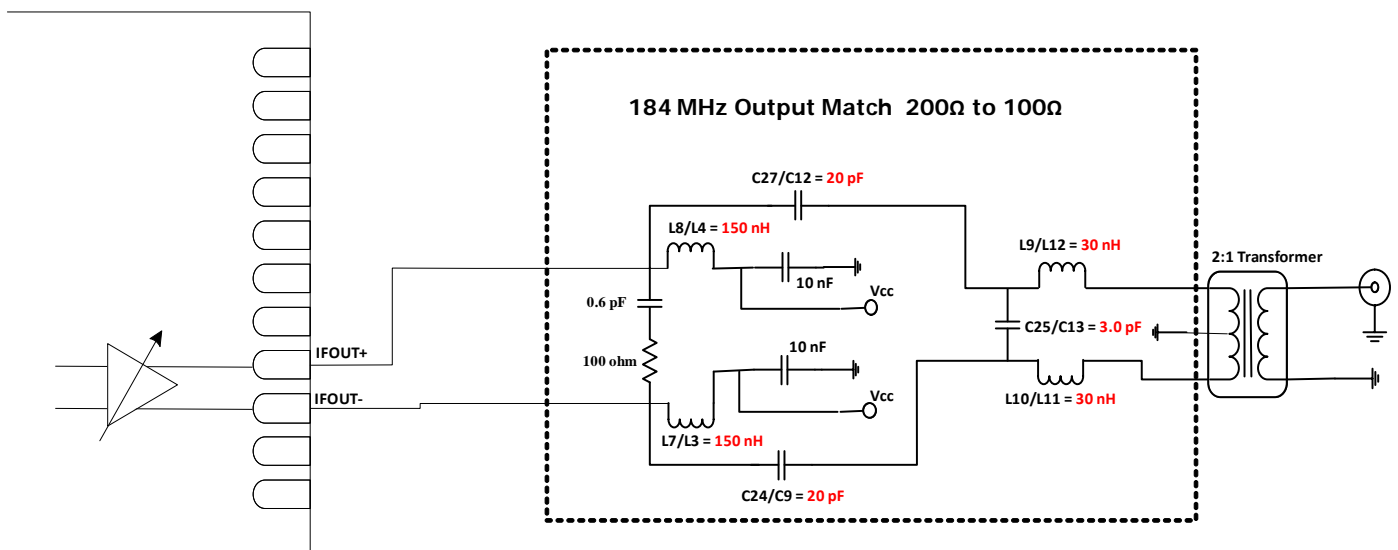

- 1 – Items in min/max columns in ***bold italics*** are confirmed by Test using BOM1 components supporting 4:1 output impedance transformation to 50 ohms.
- 2 – All other Items in min/max columns are confirmed by Design Characterization using BOM2 components supporting 2:1 output impedance transformation to 100 ohms.
- 3 – Matching network changed for 276MHz IF per BOM table values.

**TYPICAL OPERATING CONDITIONS (184 MHz IF CENTER)**

**Unless otherwise noted, the following conditions apply:**

- Applications circuit for 100ohm differential load with 184MHz +/- 40MHz BW into 2:1 Transformer. See schematic Below
- Pout ~ +1dBm
- Measurement on Channel A
- PIN from -27dBm to -3dBm per Tone (Gain Setting Adjusted to yield Pout ~ +1dBm)
- Tone Spacing = 800kHz
- Device configured in Standard Mode with Low Side Injection
- T<sub>CASE</sub> = 25C, V<sub>CC</sub> = 5.00V, LO Power = 0dBm
- RF Frequency: 2.6GHz
- IF Frequency: 184MHz
- IF Transformer Losses are de-embedded
- Input RF trace Losses are de-embedded

**PACKAGE OUTLINE DRAWINGS**

The package outline drawings are located at the end of this document and are accessible from the Renesas website (see Ordering Information for POD links). The package information is the most current data available and is subject to change without revision of this document.

**F0562 PINOUT:**

**F0562 PIN DESCRIPTION TABLE**

Pin	Name	Function
1, 3, 15, 17, 25, 38, 40, 46, 61	VCC	Power Supply. Bypass to GND with capacitors shown in the Typical Application Circuit as close as possible to pin.
2, 4, 6, 12, 14, 16, 27, 37, 39, 42, 43, 48, 56, 59	GND	Ground these pins.
5	RFIN_A	Main Channel RF Input. Internally matched to 50Ω. DO NOT apply DC to these pins
7, 11, 24, 30, 31, 32, 34, 49, 52, 54, 55, 62	NC	No Connection. Not internally connected. OK to connect to VCC, OK to connect to GND
8	TDD_A	Standby control for Channel A. Includes an internal pull-up resistor so leave as NC for Standby mode. Set this pin to low or GND for normal operation.
9	LCmode	Low_Current Mode. Includes an internal pull-up resistor so leave as NC for LC mode. Set this pin to low or GND for STD mode.
10	TDD_B	Standby control for Channel B. Includes an internal pull-up resistor so leave as NC for Standby mode. Set this pin to low or GND for normal operation.
13	RFIN_B	Diversity Channel RF Input. Internally matched to 50Ω
18	B5	Parallel Gain Control Input - MSB
19	B4	Parallel Gain Control Input
20	B3	Parallel Gain Control Input
21	B2	Parallel Gain Control Input
22	B1	Parallel Gain Control Input
23	B0	Parallel Gain Control Input – LSB (1 dB step)
26	ISET_B	ChB VGA Icc set: Recommended resistor value = 3.83K
28	IFOUT_B+	Channel B Differential Output +. Pull up to Vcc through an inductor
29	IFOUT_B-	Channel B Differential Output -. Pull up to Vcc through an inductor
33	MX_IF_BiasB	Connect the specified resistor for either Standard mode (41ohm) or LC mode (62ohm) from this pin to ground to set the bias for the Diversity IF amplifier. This is NOT a current set resistor.
35	MX_IFB+	Diversity Mixer Differential IF (+) Output. Connect a pullup inductor from this pin to VCC.
36	MX_IFB-	Diversity Mixer Differential IF (-) Output. Connect a pullup inductor from this pin to VCC.

**F0562 PIN DESCRIPTION TABLE (CONTINUED)**

41	LO1_ADJ	Connect the specified resistor for either Standard mode (220ohm) or LC mode (240ohm) from this pin to ground to set the LO common buffer Icc.
44	LO_IN	Local Oscillator Input. Connect the LO to this port through the recommended coupling capacitor.
45	LO_IN_RTN	Transformer ground return. Ground this pin.
47	LO2_ADJ	Connect the specified resistor for either Standard mode (1.3K) or LC mode (2.15K) from this pin to ground to set the LO drive buffers Icc.
50	MX_IFA-	Diversity Mixer Differential IF (-) Output. Connect a pullup inductor from this pin to VCC.
51	MX_IFA+	Diversity Mixer Differential IF (+) Output. Connect a pullup inductor from this pin to VCC.
53	MX_IF_BiasA	Connect the specified resistor for either Standard mode (41ohm) or LC mode (62ohm) from this pin to ground to set the bias for the Diversity IF amplifier. This is NOT a current set resistor.
57	IFOUT_A-	Channel A Differential Output -. Pull up to Vcc through an inductor
58	IFOUT_A+	Channel A Differential Output +. Pull up to Vcc through an inductor
60	ISET_A	ChA VGA Icc set: Recommended resistor value = 3.83K
63	A0	Parallel Gain Control Input – LSB (1dB step)
64	A1	Parallel Gain Control Input
65	A2	Parallel Gain Control Input
66	A3	Parallel Gain Control Input
67	A4	Parallel Gain Control Input
68	A5	Parallel Gain Control Input - MSB
	— EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the noted RF performance.

### F0562 DIGITAL PIN VOLTAGE AND RESISTANCE VALUES

The following table provides open-circuit DC voltage and resistance values referenced to ground for each of the control pins listed.

Pin	Name	DC Voltage (volts)	Resistance (ohms)
8	TDD_A	5	50k
9	LC_MODE	5	50k
10	TDD_B	5	50k
18 – 23	B0-B5	5	50k
63 - 68	A0-A5	5	50k

APPLICATIONS INFORMATION

Power Supplies

A common VCC power supply should be used for all pins requiring DC power. All supply pins should be bypassed with external capacitors to minimize noise and fast transients. Supply noise can degrade noise figure and fast transients can trigger ESD clamps and cause them to fail. Supply voltage change or transients should have a slew rate smaller than 1V/20uS. In addition, all control pins should remain at 0V (+/-0.3V) while the supply voltage ramps or while it returns to zero.

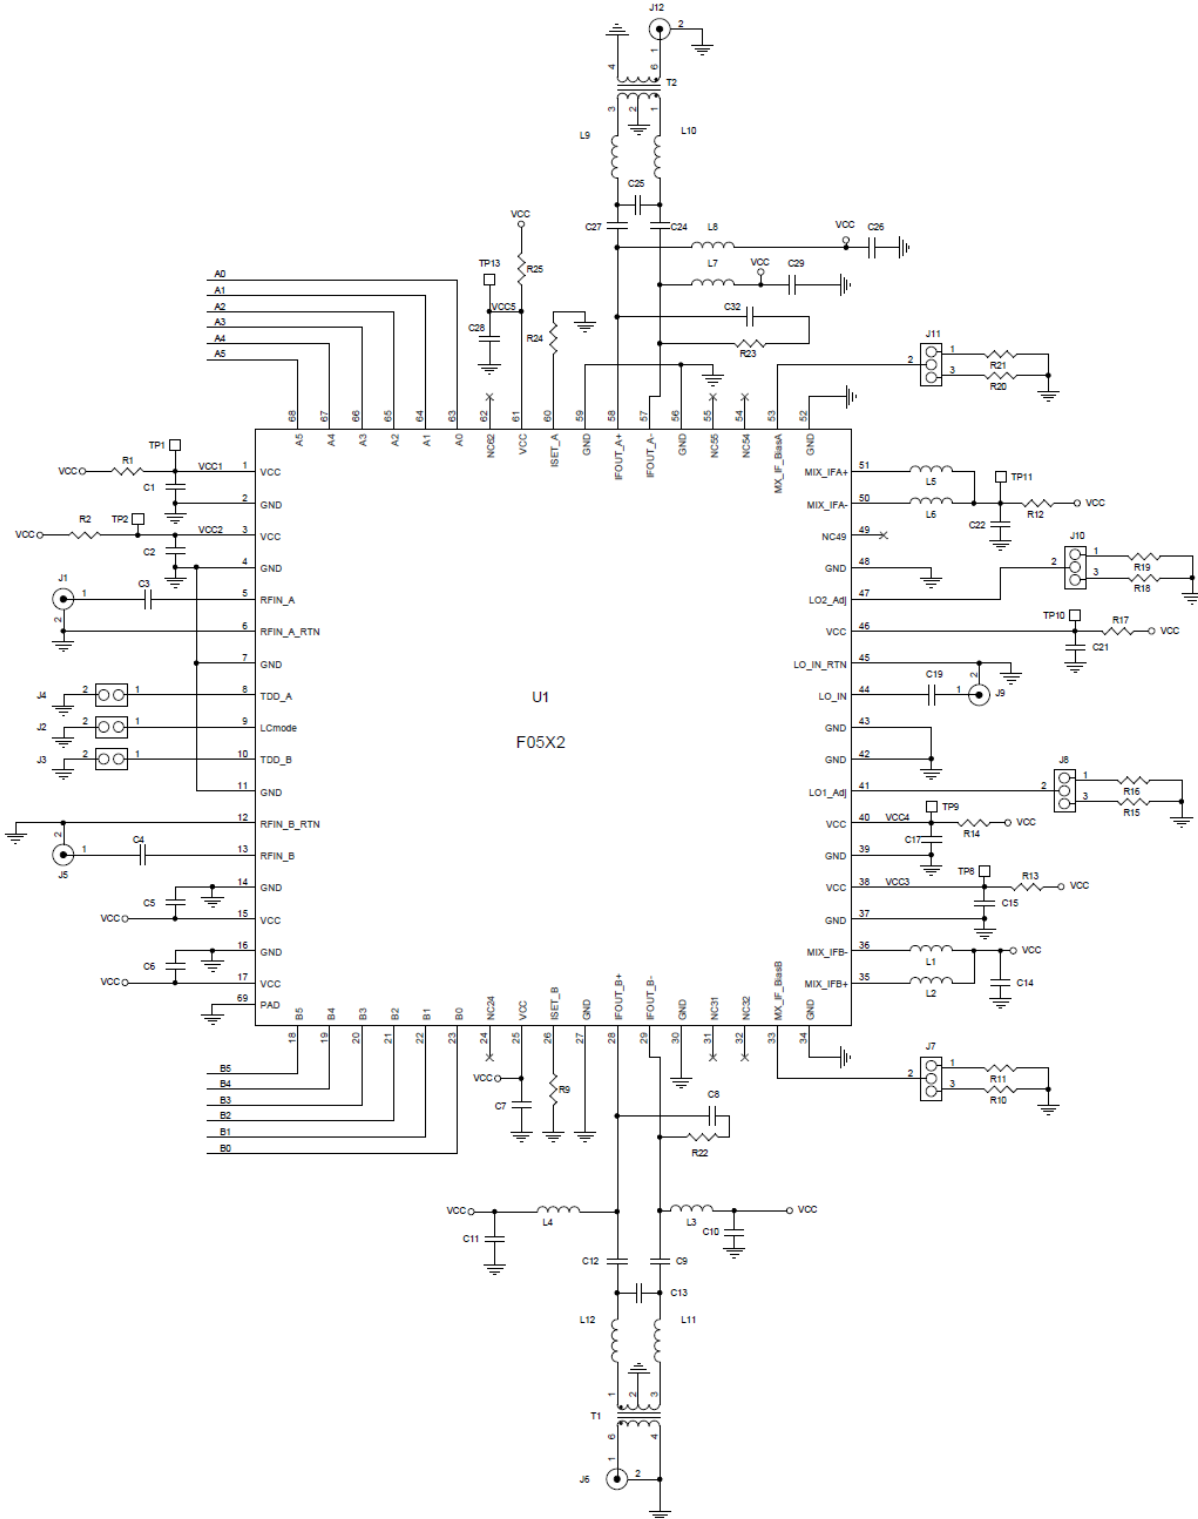

Control Pin Interface

If control signal integrity is a concern and clean signals cannot be guaranteed due to overshoot, undershoot, ringing, etc., provisions for an R-C circuit at the input of each control and data pin is recommended. This applies to pins 8, 9, 10, 18 - 23, and 63 - 68 as shown below.

**EVKIT AND TYPICAL APPLICATION SCHEMATIC:**

The following schematic describes the recommended EVkit and applications circuit.

SCHEMATIC CONTINUED FROM PREVIOUS PAGE

EVKIT PICTURE

## F0562 BOM 1 AND 2

Two BOMs are included: BOM1 supports the 4:1 output transformation from 200ohms to 50ohms used for production test and BOM2 supports the 2:1 output transformation from 200ohms to 100ohms used to generate the typical operating curve graphs.

### BOM1 includes components for 4:1 output transformation supporting production test (IF center frequency 184MHz)

### REVISION HISTORY

Revision Date	Description
February 9, 2022	Rebranded to Renesas.
April 16, 2014	Initial release.

NOTES:

1. JEDEC compatible.
2. All dimensions are in mm and angles are in degrees.
3. Use  $\pm 0.05$  mm for the non-toleranced dimensions.
4. Numbers in ( ) are for references only.

## IMPORTANT NOTICE AND DISCLAIMER

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES (“RENESAS”) PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD-PARTY INTELLECTUAL PROPERTY RIGHTS.
