F1912

6-Bit Digital Step Attenuator, 1MHz to 4000MHz

This document describes the specification for the Renesas F1912 Digital Step Attenuator. The F1912 is part of a family of *Glitch-Free*™ DSAs optimized for the demanding requirements of Base Station (BTS) radio cards and numerous other non-BTS applications. These devices are offered in a compact 4mm x 4mm 20-pin QFN package with 50Ω impedances for ease of integration.

Competitive Advantage

Digital step attenuators are used in receivers and transmitters to provide gain control. The F1912 is a 6-bit step attenuator optimized for these demanding applications. The silicon design has very low insertion loss and low distortion (> +60 dBm IIP3). The device has pinpoint accuracy. Most importantly, the F1912 includes Renesas' Glitch-FreeTM technology, which results in low overshoot and ringing during MSB transitions.

- Glitch-FreeTM technology so PA or ADC will not be damaged during when transitions.
- Extremely accurate with low distortion.
- Lowest insertion loss for best SNR

Applications

- Base Station 2G, 3G, 4G, TDD radio cards
- Repeaters and E911 systems
- Digital Pre-Distortion
- Point to Point Infrastructure
- Public Safety Infrastructure
- WIMAX Receivers and Transmitters
- Military Systems, JTRS radios
- RFID Handheld and Portable Readers
- Cable Infrastructure

Features

- Serial and 6-bit Parallel Interface
- 31.5dB Control Range
- 0.5dB step
- *Glitch-Free*™, low transient overshoot
- 3.0 V to 5.25 V supply
- 1.8 V or 3.3 V control logic
- Attenuation Error < 0.20 dB at 2GHz
- Low Insertion Loss < 1.4 dB at 2GHz
- Ultra Linear IIP3 > +60dBm
- IIP2 = +110 dBm typical
- Stable Integral Non-Linearity over temperature
- Low Current Consumption 550 µA typical
- -55 °C to +105 °C operating temperature
- 4 x 4 mm Thin QFN 20-pin package

1.2 Pin Descriptions

Pin	Name	Function
1	D5	16 dB Attenuation Control Bit. Pull high for 16 dB ATTN.
2	RF1	Device RF input or output (bi-directional). Internally DC blocked.
3	DATA	Serial interface Data Input.
4	CLK	Serial interface Clock Input.
5	LE	Serial interface Latch Enable Input. Internal pullup (100K ohm).
6	VDD	Power supply pin.
7	NC	Internally unconnected.
8	NC	Internally unconnected.
9	NC	Internally unconnected.
10	GND	Connect to Ground. This pin is internally connected to the exposed paddle.

Pin	Name	Function
11	GND	Connect to Ground. This pin is internally connected to the exposed paddle.
12	GND	Connect to Ground. This pin is internally unconnected.
13	VMODE	Pull high for serial control mode. Ground for parallel control mode.
14	RF2	Device RF input or output (bi-directional). Internally DC blocked.
15	D4	8 dB Attenuation Control Bit. Pull high for 8 dB ATTN.
16	D3	4 dB Attenuation Control Bit. Pull high for 4 dB ATTN.
17	D2	2 dB Attenuation Control Bit. Pull high for 2 dB ATTN.
18	GND	Connect to Ground. This pin is internally unconnected.
19	D1	1 dB Attenuation Control Bit. Pull high for 1 dB ATTN.
20	D0	0.5 dB Attenuation Control Bit. Pull high for 0.5 dB ATTN.
EPAD	Exposed Paddle	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the specified RF performance.

2. Specifications

2. Items in min/max columns that are not bold/italics are confirmed by Design Characterization.
3. The input 0.1dB compression point is a linearity figure of merit. Refer to Absolute Maximum Ratings section for the maximum RF input power.
4. Spurious due to on-chip negative voltage generator. Typical generator fundamental frequency is 2.2 MHz.
5. The power supply voltage must be applied before all other voltages. See Applications Information.

3. Functional Description

3.1 Programming Options

F1912 can be programmed using either the parallel or serial interface, which is selectable via V_{MODE} (pin 13). Serial mode is selected by floating V_{MODE} or pulling it to a voltage logic high (greater than V_{IH}) and parallel mode is selected by setting V_{MODE} to logic low (less than V_{IL}).

3.2 Serial Control Mode

F1912 Serial mode is selected by floating V_{MODE} (pin 13) or pulling it to a voltage > V_{IH}. The serial interface is a 6 bit shift register to shift in the data MSB (D5) first. When serial programming is used, all the parallel control input pins (1, 15, 16, 17, 19, 20) **must** be grounded.

3.2.1. Serial Mode Register Timing Diagram

With serial control, the F1912 can be programmed via the serial port on the rising edge of Latch Enable (LE), which loads the last 6 DATA line bits [formatted MSB (D5) first] resident in the SHIFT register followed by the next 5 bits.

Note The Timing Spec Intervals In Blue.

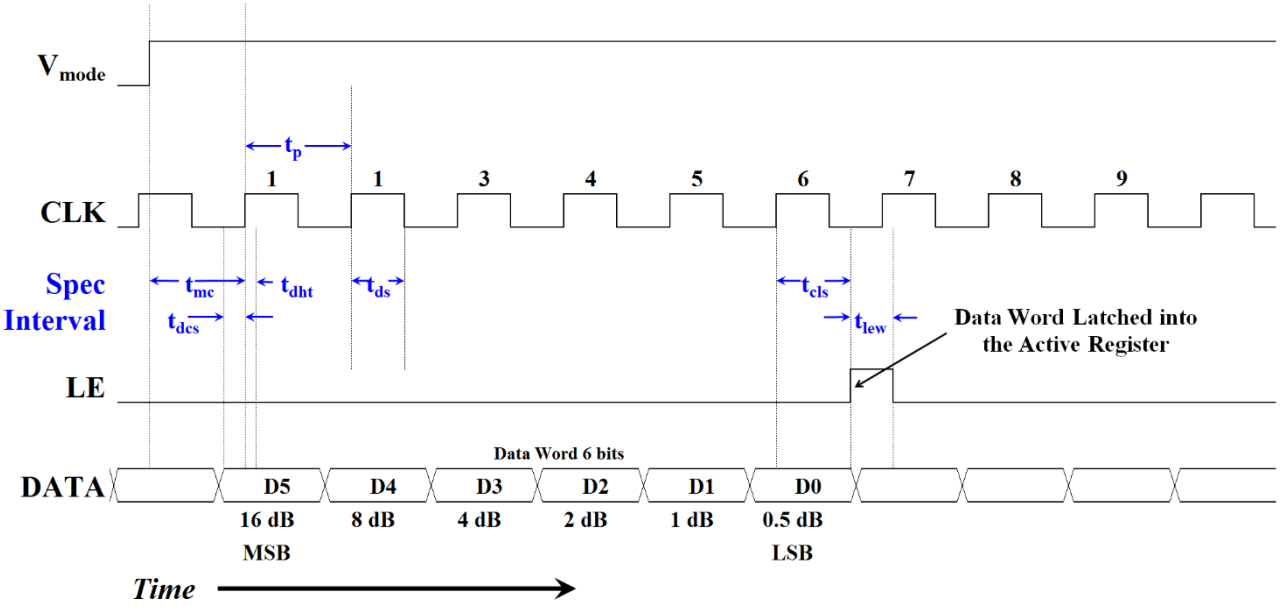

Figure 2. Serial Register Timing Diagram

Note: When Latch enable is high, the shift register is disabled and DATA is NOT continuously clocked into the shift register which minimizes noise. It is recommended that Latch enable be left high when the device is not being programmed.

t_{dht}	Data Hold Time - From rising edge of CLK to falling edge of the Data bit.	10		ns

3.2.2. Serial Mode Default Startup Condition:

When the device is first powered up it will default to the Maximum Attenuation of 31.5 dB independent of the V_{MODE} and parallel pin [D5:D0] conditions.

Table 4. Default Control Word for the Serial Mode

D5 (MSB)	D4	D3	D2	D1	D0 (LSB)	Attenuation (dB)
1	1	1	1	1	1	31.5

3.3 Parallel Control Mode

For the F1912 the user has the option of running in one of two parallel modes. Direct Parallel Mode or Latched Parallel Mode.

3.3.1. Direct Parallel Mode

Direct Parallel Mode is selected when V_{MODE} (pin 13) is less than V_{IL} and LE (pin 5) is greater than V_{IH}. In this mode the device will immediately react to any voltage changes to the parallel control pins [pins 1, 15, 16, 17, 19, 20]. Use direct parallel mode for the fastest settling time.

3.3.2. Latched Parallel Mode

Latched Parallel Mode is selected when V_{MODE} is less than V_{IL} and LE (pin 5) is toggled from less than V_{IL} to greater than V_{IH}. To utilize Latched Parallel Mode:

- Set LE < V_{IL}
- Adjust pins [pins 1, 15, 16, 17, 19, 20] to the desired attenuation setting. (Note the device will not react to these pins while LE < V_{IL}.)
- Pull LE > V_{IH}. The device will then transition to the attenuation settings reflected by pins D5 – D0.

Latched Parallel Mode implies a default state for when the device is first powered up with VMODE < V_{IL} and LE < V_{IL}. In this case the default setting is MAXIMUM Attenuation.

4. Typical Operating Conditions (TOC)

Unless otherwise noted for the TOC graphs on the following pages, the following conditions apply.

- V_{DD} = +3.30 V
- T_{CASE} = +25 °C
- F_{RF} = 2 GHz
- P_{IN} = 0 dBm for single tone measurements
- P_{IN} = +10 dBm/tone for multi-tone measurements
- Tone Spacing = 50 MHz
- EVKit connector and board losses are de-embedded

6. Applications Information

6.1 F1912 Digital Pin Voltage and Resistance Values (Pins Not Connected)

The following table lists the resistance between various pins and ground when no DC power is applied. When the device is powered up with +5 Volts DC these same pins should have the measured voltage to ground.

Pin	Name	DC Voltage (volts)	Resistance (ohms)
13	V_{MODE}	2.5V	100 kΩ pullup resistor to internally regulated 2.5 V
3, 4, 5	DATA, CLK, LE	2.5V	100 kΩ pullup resistor to internally regulated 2.5 V

6.2 Logic Voltage Applied before Power Supply

Due to on-chip ESD protection circuitry, the V_{DD} supply voltage is required to be present before the logic voltages can be applied to the logic pins (V_{MODE}, DATA, LE, CLK, D[5:0]). If in the application this is not possible, then a series resistor of 3kΩ needs to be added in line with each of the logic pins, D0-D3. The other logic pins (V_{MODE}, DATA, LE, CLK, D4, D5) already have a significant resistor value per the Bill Of Material (BOM). This resistor limits the current into the logic pin to a safe level when V_{DD} is not present. The resistor should be placed close to the device to minimize the impact on switching speed due to stray PCB parasitics.

You are solely responsible for (1) selecting the appropriate products for your application, (2) designing, validating, and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. Renesas grants you permission to use these resources only to develop an application that uses Renesas products. Other reproduction or use of these resources is strictly prohibited. No license is granted to any other Renesas intellectual property or to any third-party intellectual property. Renesas disclaims responsibility for, and you will fully indemnify Renesas and its representatives against, any claims, damages, costs, losses, or liabilities arising from your use of these resources. Renesas' products are provided only subject to Renesas' Terms and Conditions of Sale or other applicable terms agreed to in writing. No use of any Renesas resources expands or otherwise alters any applicable warranties or warranty disclaimers for these products.
