

HA-5137A

63MHz, Ultra-Low Noise Precision Operational Amplifier

FN2908  
Rev 5.00  
April 2000

The HA-5137 operational amplifier features an unparalleled combination of precision DC and wideband high speed characteristics. Utilizing the Intersil Dielectric Isolation technology and advanced processing techniques, this unique design unites low noise ( $3\text{nV}/\sqrt{\text{Hz}}$ ) precision instrumentation performance with high speed ( $20\text{V}/\mu\text{s}$ ) wideband capability.

This amplifier's impressive list of features include low  $V_{OS}$  ( $10\mu\text{V}$ ), wide gain bandwidth (63MHz), high open loop gain ( $1800\text{V}/\text{mV}$ ), and high CMRR (126dB). Additionally, this flexible device operates over a wide supply range ( $\pm 5\text{V}$  to  $\pm 20\text{V}$ ) while consuming only 140mW of power.

Using the HA-5137 allows designers to minimize errors while maximizing speed and bandwidth in applications requiring gains greater than five.

This device is ideally suited for low level transducer signal amplifier circuits. Other applications which can utilize the HA-5137's qualities include instrumentation amplifiers, pulse or RF amplifiers, audio preamplifiers, and signal conditioning circuits.

This device can easily be used as a design enhancement by directly replacing the 725, OP25, OP06, OP07, OP27 and OP37 where gains are greater than five. For the military grade product, refer to the HA-5137/883 data sheet.

**Pinout**

**Features**

- Slew Rate . . . . .  $20\text{V}/\mu\text{s}$
- Wide Gain Bandwidth ( $A_V \geq 5$ ) . . . . . 63MHz
- Low Noise . . . . .  $3\text{nV}/\sqrt{\text{Hz}}$  at 1kHz
- Low  $V_{OS}$ . . . . .  $10\mu\text{V}$
- High CMRR . . . . . 126dB
- High Gain . . . . .  $1800\text{V}/\text{mV}$

**Applications**

- High Speed Signal Conditioners
- Wide Bandwidth Instrumentation Amplifiers
- Low Level Transducer Amplifiers
- Fast, Low Level Voltage Comparators
- Highest Quality Audio Preamplifiers
- Pulse/RF Amplifiers
- For Further Design Ideas See Application Note AN553

**Ordering Information**

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
HA7-5137A-5	0 to 75	8 Ld CERDIP	F8.3A

**Absolute Maximum Ratings**  $T_A = 25^\circ\text{C}$ 

Voltage Between V+ and V- Terminals	44V
Differential Input Voltage (Note 1)	0.7V
Output Current	Full Short Circuit Protection

**Operating Conditions**

Temperature Range	0°C to 75°C
HA-5137A-5	0°C to 75°C

**Thermal Information**

Thermal Resistance (Typical, Note 2)	$\theta_{JA}$ (°C/W)	$\theta_{JC}$ (°C/W)
CERDIP Package	115	28
Maximum Junction Temperature (Hermetic Package)	175°C	
Maximum Storage Temperature Range	-65°C to 150°C	
Maximum Lead Temperature (Soldering 10s)	300°C	

**CAUTION:** Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

**NOTES:**

- For differential input voltages greater than 0.7V, the input current must be limited to 25mA to protect the back-to-back input diodes.
- $\theta_{JA}$  is measured with the component mounted on an evaluation PC board in free air.

**Electrical Specifications**  $V_{\text{SUPPLY}} = \pm 15\text{V}$ ,  $C_L \leq 50\text{pF}$ ,  $R_S \leq 100\Omega$ 

PARAMETER	TEST CONDITIONS	TEMP. (°C)	MIN	TYP	MAX	UNITS
<b>INPUT CHARACTERISTICS</b>

**Electrical Specifications**  $V_{SUPPLY} = \pm 15V, C_L \leq 50pF, R_S \leq 100\Omega$  (Continued)

PARAMETER	TEST CONDITIONS	TEMP. (°C)	MIN	TYP	MAX	UNITS
Power Supply Rejection Ratio	$V_S = \pm 4V$ to $\pm 18V$	Full	-	2	4	$\mu V/V$

NOTES:

3. This parameter value is based upon design calculations.
4. Refer to Typical Performance section of the data sheet.
5. The limits for this parameter are based on lab characterization, and reflect lot-to-lot variation.
6. Full power bandwidth guaranteed based on slew rate measurement using:  $FPBW = \frac{Slew\ Rate}{2\pi V_{PEAK}}$
7. Refer to Test Circuits section of the data sheet.
8. Settling time is specified to 0.1% of final value for a 10V output step and  $A_V = -5$ .

**Test Circuits and Waveforms**

FIGURE 1. LARGE AND SMALL SIGNAL RESPONSE TEST CIRCUIT

Vertical Scale: Input = 1V/Div.  
Output = 5V/Div.  
Horizontal Scale: 1 $\mu$ s/Div.

LARGE SIGNAL RESPONSE

Vertical Scale: Input = 20mV/Div.  
Output = 100mV/Div.  
Horizontal Scale: 100ns/Div.

SMALL SIGNAL RESPONSE

NOTES:

9.  $A_V = -5$ .
10. Feedback and summing resistors should be 0.1% matched.
11. Clipping diodes are optional. HP5082-2810 recommended.

FIGURE 2. SETTLING TIME TEST CIRCUIT

### Schematic Diagram

**Application Information**

NOTE: Tested Offset Adjustment Range is  $|V_{OS} + 1mV|$  minimum referred to output. Typical range is  $\pm 4mV$  with  $R_p = 10k\Omega$ .

**FIGURE 3. SUGGESTED OFFSET VOLTAGE ADJUSTMENT**

NOTE: Low resistances are preferred for low noise applications as a  $1k\Omega$  resistor has  $4nV/\sqrt{Hz}$  of thermal noise. Total resistances of greater than  $10k\Omega$  on either input can reduce stability. In most high resistance applications, a few picofarads of capacitance across the feedback resistor will improve stability.

**NOTES:**

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH
