

To our customers,

---

## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1<sup>st</sup>, 2010  
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

# HD49351BP/HBP

## CDS/PGA & 10-bit A/D TG Converter

REJ03F0110-0100Z

Rev.1.0

Jul 06, 2004

---

### Description

The HD49351BP/HBP is a CMOS IC that provides CDS-PGA analog processing (CDS/PGA) suitable for CCD camera digital signal processing systems together with a 10-bit A/D converter and timing generator in a single chip. HD49351 has deleted the stripe mode, pd\_mix mode, and added the 5 – 6 pulse and H\_msk2 - 4 as contrasted with HD49335.

There are address map and timing generator charts besides this specification. May be contacted to our sales department if examining the details.

### Functions

- Correlated double sampling
- PGA
- 10-bit ADC
- Timing generator
- Operates using only the 3 V voltage
- Corresponds to switching mode of power consumption and operating frequency  
220 mW (Typ), maximum frequency: 36 MHz (HD49351HBP)  
150 mW (Typ), maximum frequency: 25 MHz (HD49351BP)
- ADC direct input mode
- FBGA 65-pin package

### Features

- Suppresses low-frequency noise, which output from CCD by the correlated double sampling.
- The S/H response frequency characteristics for the reference level can be adjusted using values of external parts and registers.
- High sensitivity is achieved due to the high S/N ratio and a wide dynamic range provided by a PG amplifier.
- PGA, pulse timing, standby mode, etc., is achieved via a serial interface.
- High precision is provided by a 10-bit-resolution A/D converter.
- Difference encoded gray code can be selected as an A/D output code. It is effective in suppression of solarization (wave pattern). It is patented by Renesas.
- Timing generator generates the all of pulse which are needed for CCD driving.

Pin Arrangement

(Top view)

- Notes: 1. Pin 41 outputs the STROB, pin 39 outputs the SUB\_SW when pin 61 is Low.  
 2. Pin 41 inputs the Vgate, pin 39 inputs the ADCK when pin 61 is High.  
 3. 1/2 and 4clk output terminal becomes 1/3 and 1/6clk output respectively, when operating TG in 3 divided mode.

Pin Description

BGA Pin No.	PAD No.	Symbol	Description	I/O	Analog(A) or Digital(D)	Remarks
K1	1	ID	Odd/even number line detecting pulse output pin	O	D	2 mA/10 pF
J1	2	DVss1, 2	CDS Digital ground + ADC output buffer ground (0V)	—	D	
H1 to D2	3 to 12	D0 to D9	Digital output (D0; LSB, D9; MSB)	O	D	2 mA/10 pF
C1	13	DVdd2	ADC output buffer power supply (3 V)	—	D	
C2, C3	14	Dvss3	General ground for TG (0V)	—	D	
B1	15	CLK_in	CLK input (max 72 MHz)	I	D	
A1	16	HD_in	HD input	I	D	
A2	17	VD_in	VD input	I	D	
B2	18	Reset	Hardware reset (for DLL reset)	I	D	Schmitt trigger
A3	19	RG	Reset gate pulse output	O	D	3 mA/10 pF
B3	20	DVdd3	General power supply for TG (3V)	—	D	
B4	21	DVdd4	H1,2 buffer power supply (3 V)	—	D	
A4	22	H1	H.CCD transfer pulse output-1	O	D	30 mA/165 pF
B5	23	1/2clk_o	CLK_in 2 divided output. 3 divided output at 3 divided mode	O	D	2 mA/10 pF
A5	24	Dvss4	H1,2 buffer ground (0 V)	—	D	
B6	25	Dvss4	H1,2 buffer ground (0 V)	—	D	
A6	26	H2	H.CCD transfer pulse output-2	O	D	30 mA/165 pF
B7	27	1/4clk_o	CLK_in 4 divided output. 6 divided output at 3 divided mode	O	D	2 mA/10 pF
B8	28	DVdd4	H1,2 buffer power supply (3 V)	—	D	
A7	29	DVdd3	General power supply for TG (3 V)	—	D	

**Pin Description (cont.)**

BGA Pin No.	PAD No.	Symbol	Description	Analog(A) or		Remarks
				I/O	Digital(D)	
A8	30	XV1	V.CCD transfer pulse output-1	O	D	2 mA/10 pF
A9	31	XV2	V.CCD transfer pulse output-2	O	D	2 mA/10 pF
A10	32	XV3	V.CCD transfer pulse output-3	O	D	2 mA/10 pF
B10	33	XV4	V.CCD transfer pulse output-4	O	D	2 mA/10 pF
B9	34	CH1	Read out pulse output-1	O	D	2 mA/10 pF
C10	35	CH2	Read out pulse output-2	O	D	2 mA/10 pF
C9	36	CH3	Read out pulse output-3	O	D	2 mA/10 pF
D9	37	CH4	Read out pulse output-4	O	D	2 mA/10 pF
D10	38	XSUB	Pulse output for electronic shutter	O	D	2 mA/10 pF
E9	39	SUB_SW	SUB voltage control output-1. Input the ADCK when 61 pin is Hi	I/O	D	2 mA/10 pF
E10	40	SUB_PD	SUB voltage control output-2	O	D	2 mA/10 pF
F9	41	STROB	Flash control output. Input Vgate at Hi of 61pin	I/O	D	2 mA/10 pF
F10	42	DVss3	General ground for TG (0 V)	—	D	
G9	43	AVss	Analog ground (0 V)	—	A	
H9	44	ADC_in	A/D converter input pin	I	A	
G10	45	BIAS	Bias standard resistance (33 kΩ for Gnd)	—	A	
H10	46	VRB	ADC bottom standard voltage (0.1 μF for Gnd)	—	A	
K10	47	VRT	ADC top standard voltage (0.1 μF for Gnd)	—	A	
J10	48	VRM	ADC middle standard voltage (0.1 μF for Gnd)	—	A	
J9	49	Avdd	Analog power supply (3 V)	—	A	
K9	50	BLK_C	Black level C pin (1000pF for Gnd)	—	A	
K8	51	CDS_in	CDS input pin	I	A	
J8	52	AVdd	Analog power supply (3 V)	—	A	
K7	53	BLKFB	Black level FB pin (1 μF between BLKFB and BLKSH)	I	A	
K6	54	BLKSH	Black level S/H pin	O	A	
J7	55	AVss	Analog ground (0 V)	—	A	
J6	56	Test2	H: Normal operation, L: CDS single operation mode Input 36; PBLK at testing, Input 37; OBP, Input 38; CPDM, Input 39; ADCLK, Input 40; SP2, Input 41; SP1	I	D	
J5	57	Test1	L: Slave mode, H: Master mode	I	D	
K5	58	DLL_C	Analog delay DLL external C pin (100 pF for Gnd)	O	A	
J4	59	Dvdd1	Digital power supply (3 V) CDS, PAG, ADC part	—	D	
K4	60	MON	Pulse monitor (SP1, SP2, ADCLK, OBP, CPDM, PBLK output)	O	D	2 mA/10 pF
J3	61	41cont	Input STROB = pin 41, Input SUB_SW = pin 39 at Low Input Vgate = pin 41, Input ADCK = pin 39 at Hi	I	D	
J2	62	CDS_CS	Serial data CS at CDS part	I	D	
K3	63	SDATA	Input serial data	I	D	
K2	64	SCK	Input serial clock	I	D	

**Input/Output Equivalent Circuit**

Pin Name	Equivalent Circuit
Digital output D0 to D9, RG, H1A to H2B, XV1 to XV4, CH1 to CH4, XSUB, SUB_SW, SUB_PD, STROB, MON	
Digital input ADCLK, OBP, CPDM, SP1,2, PBLK, CS, SCK, SDATA, CLK_in, HD_in, VD_in	
Analog CDS_in	
ADC_in	
BLKSH, BLKFB, BLKC	
VRT, VRM, VRB	
BIAS	

Block Diagram

## Internal Functions

### Functional Description

- CDS input
  - CCD low-frequency noise is suppressed by CDS (correlated double sampling).
  - The signal level is clamped at 14 LSB to 76 LSB (set by register: 5 bit 2 LSB step controls) during the OB period. \*<sup>1</sup>
  - Gain can be adjusted using 8 bits of register (0.132 dB steps) within the range from -2.36 dB to 31.40 dB. \*<sup>2</sup>
- ADC input
  - The center level of the input signal is clamped at 512 LSB (Typ).
  - Gain can be adjusted using 8 bits of register (0.01784 times steps, register settings) within the range from 0.57 times (-4.86 dB) to 5.14 times (14.22 dB). \*<sup>2</sup>
- Automatic offset calibration of PGA and ADC
- DC offset compensation feedback for CCD and CDS
- Pre-blanking
  - Digital output is fixed at clamp level
- Digital outputs enable function

Note: 1. It is not covered by warranty when 14 LSB settings  
 2. Full-scale digital output is defined as 0 dB (one time) when 1 V is input.

### Operating Description

Figure 1 shows CDS/PGA + ADC function block.

**Figure 1 CDS/PGA Functional Block Diagram**

#### 1. CDS (Correlated Double Sampling) Circuit

The CDS circuit extracts the voltage differential between the black level and a signal including the black level. The black level is directly sampled at C1 by using the SP1 pulse, buffered by the SHAMP, then provided to the CDSAMP.

The signal level is directly sampled at C2 by using the SP2 pulse, and then provided to CDSAMP (see figure 1). The difference between these two signal levels is extracted by the CDSAMP, which also operates as a programmable gain amplifier at the previous stage. The CDS input is biased with VRT (2 V). During the PBLK period, the above sampling and bias operation are paused.

#### 2. PGA Circuit

The PGAMP is the programmable gain amplifier for the latter stage. The PGAMP and the CDSAMP set the gain using 8 bits of register.

The equation below shows how the gain changes when register value N is from 0 to 255.

In CDSIN mode: Gain = (-2.36 dB + 0.132 dB) × N (LOG linear).

In ADCIN mode: Gain = (0.57 times + 0.001784 times) × N (linear).

Full-scale digital output is defined as 0 dB (one time) when 1 V is input.

3. Automatic Offset Calibration Function and Black-Level Clamp Data Settings

The DAC DC voltage added to the output of the PGA amplifier is adjusted by automatic offset calibration.

The data, which cancels the output offset of the PGA amplifier and the input offset of the ADC, and the clamp data (14 LSB to 76 LSB) set by register are added and input to the DAC.

The automatic offset calibration starts automatically after the RESET mode set by register is cancelled and terminates after 40,000 clock cycles (when fclk = 40.0 MHz, 1.0 ms, fclk = 20.0 MHz, 2.0 ms).

4. DC Offset Compensation Feedback Function

Feedback is done to set the black signal level input during the OB period to the DC standard, and all offsets (including the CCD offset and the CDSAMP offset) are compensated for.

The offset from the ADC output is calculated during the OB period, and SHAMP feedback capacitor C3 is charged by the current DAC (see figure 1).

The open-loop differential gain ( $\Delta\text{Gain}/\Delta\text{H}$ ) per 1 H of the feedback loop is given by the following equation. 1H is the one cycle of the OBP.

$$\Delta\text{Gain}/\Delta\text{H} = 0.078/(\text{fclk} \times \text{C3}) \quad (\text{fclk: ADCLK frequency, C3: SHAMP external feedback capacitor})$$

Example: When fclk = 20 MHz and C3 = 1.0  $\mu\text{F}$ ,  $\Delta\text{Gain}/\Delta\text{H} = 0.0039$

DC offset compensation per 1 H (LSB) =  $0.0039 \times \text{Offset error (LSB)}$  <sup>Note)</sup>

Note: There is a maximum value in the above-mentioned amount of offset errors.

When the PGAMP gain setting is changed, the high-speed lead-in operation state is entered, and the feedback loop gain is increased by a multiple of N. Loop gain multiplication factor N can be selected from 4 times, 8 times, 16 times, or 32 times by changing the register settings (see table 1). Note that the open-loop differential gain ( $\Delta\text{Gain}/\Delta\text{H}$ ) must be one or lower. If it is two or more, oscillation occurs.

The time from the termination of high-speed lead-in operation to the return of normal loop gain operation can be selected from 1 H, 2 H, 4 H, or 8 H. If the offset error is over 16 LSB, the high-speed lead-in operation continues, and when the offset error is 16 LSB or less, the operation returns to the normal loop-gain operation after 1 H, 2 H, 4 H, or 8 H depending on the register settings. (Refer to table 2.)

Table 1 Loop Gain Multiplication Factor during High-Speed Lead-In Operation

HGain-Nsel (register settings)		Multiplication Factor N
[0]	[1]	
L	L	$\times 4$
H	L	$\times 8$
L	H	$\times 16$
H	H	$\times 32$

Table 2 High-Speed Lead-In Operation Cancellation Time

HGstop-Hsel (register settings)		Cancellation Time
[0]	[1]	
L	L	1 H
H	L	2 H
L	H	4 H
H	H	8 H

5. Pre-Blanking Function

During the PBLK input period, the CDS input operation is separated and protected from the large input signal. The ADC digital output is fixed to clamp data (14 to 76 LSB).

6. ADC Digital Output Control Function

The ADC digital output includes the functions output enable, code conversion, and test mode. Tables 3, 4 and 5 show the output functions and the codes.

**Table 3 ADC Digital Output Functions**

STBY	TEST0	TEST1	LINV	MINV	PBLK	ADC Digital Output										Operating Mode					
						D9	D8	D7	D6	D5	D4	D3	D2	D1	D0						
H	X	X	X	X	X	Hi-Z											Low-power wait state				
L	L	L	L	L	L	Same as in table 4.											Normal operation				
			L	H	L	D9 is inverted in table 4.

7. Adjustment of Black-Level S/H Response Frequency Characteristics

The CR time constant that is used for sampling/hold (S/H) at the black level can be adjusted by changing the register settings, as shown in table 6.

**Table 6 SHSW CR Time Constant Setting**

	SHSW-fsel (Register setting)																															
	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]								
	L	L	L	L	H	L	L	L	L	H	L	L	L	L	H	L	H	L	H	L	L	H	H	L	H	H	H	L				
CR Time Constant (Typ) (cutoff frequency conversion)	2.20 nsec (72 MHz)				2.30 nsec (69 MHz)				2.51 nsec (63 MHz)				2.64 nsec (60 MHz)				2.93 nsec (54 MHz)				3.11 nsec (51 MHz)				3.52 nsec (45 MHz)				3.77 nsec (42 MHz)			

	SHSW-fsel (Register setting)																															
	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]	[0]	[1]	[2]	[3]								
	L	L	L	H	H	L	L	H	L	H	L	H	H	L	H	L	L	H	H	H	L	H	H	H	H	H	H	H				
CR Time Constant (Typ) (cutoff frequency conversion)	4.40 nsec (36 MHz)				4.80 nsec (33 MHz)				5.87 nsec (27 MHz)				6.60 nsec (24 MHz)				8.80 nsec (18 MHz)				10.6 nsec (15 MHz)				17.6 nsec (9 MHz)				26.4 nsec (6 MHz)			

8. The SHAMP frequency characteristics can be adjusted by changing the register settings and the C4 value of the external pin. The settings are shown in table 7. Values other than those shown in the table 7 cannot be used.

Recommendation value of C is 1000 pF

**Table 7 SHAMP Frequency Characteristics Setting**

LoPwr (Register setting)	SHA-fsel (Register setting)							
	[0]	[1]	[0]	[1]	[0]	[1]	[0]	[1]
	L	L	H	L	L	H	H	H
"Lo"	230 MHz 6800 pF (240 pF)		116 MHz 10000 pF (270 pF)		75 MHz 13000 pF (300 pF)		56 MHz 18000 pF (360 pF)	
"Hi"	100 MHz 10000 pF (560 pF)		49 MHz 15000 pF (620 pF)		32 MHz 22000 pF (750 pF)		24 MHz 27000 pF (820 pF)	

Note: Upper line : SHAMP cutoff frequency (Typ)  
 Middle line : Standard value of C4 (maximum value is not defined)  
 Lower line : Minimum value of C4 (do not set below this value)

**Timing Chart**

Figure 2 shows the timing chart when CDS\_in and ADC\_in input modes are used.

**Figure 2 Output Timing Chart when CDS\_in and ADC\_in Input Modes are Used**

- The ADC output (D0 to D9) is output at the rising edge of the ADCLK in both modes.
- Pipe-line delay is ten clock cycles when CDS\_in is used and nine when ADC\_in is used.
- In ADC\_in input mode, the input signal is sampled at the rising edge of the ADCLK.

Detailed Timing Specifications

Detailed Timing Specifications when CDS\_in Input Mode is Used

Figure 3 shows the detailed timing specifications when the CDS\_in input mode is used, and table 8 shows each timing specification.

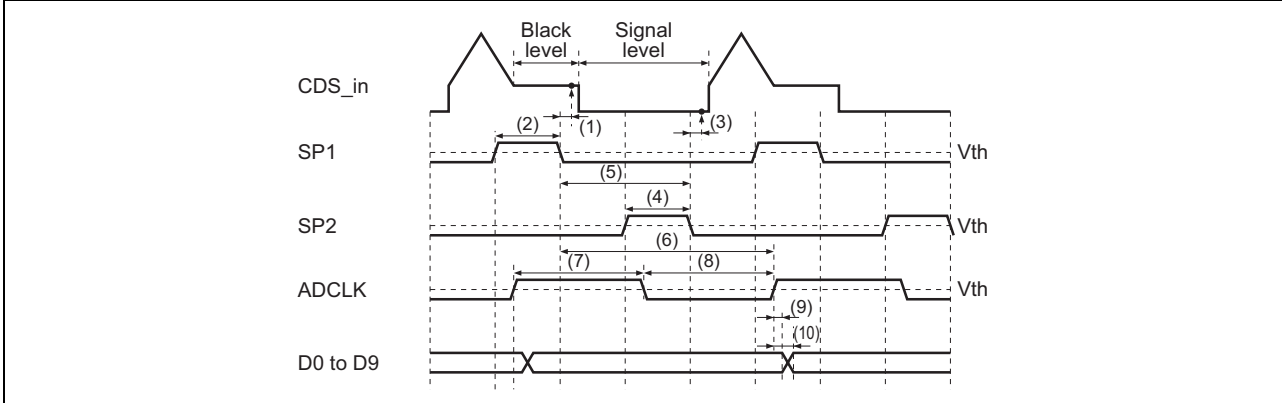

Figure 3 Detailed Timing Chart when CDS\_in Input Mode is Used

Table 8 Timing Specifications when the CDS\_in Input Mode is Used

No.	Timing	Symbol	Min	Typ	Max	Unit
(1)	Black-level signal fetch time	t <sub>CDS1</sub>	—	(1.5)	—	ns
(2)	SP1 'Hi' period	t <sub>CDS2</sub>	Typ × 0.8	1/4f <sub>CLK</sub>	Typ × 1.2	ns
(3)	Signal-level fetch time	t <sub>CDS3</sub>	—	(1.5)	—	ns
(4)	SP2 'Hi' period	t <sub>CDS4</sub>	Typ × 0.8	1/4f <sub>CLK</sub>	Typ × 1.2	ns
(5)	SP1 falling to SP2 falling time	t <sub>CDS5</sub>	Typ × 0.85	1/2f <sub>CLK</sub>	Typ × 1.15	ns
(6)	SP1 falling to ADCLK rising inhibit time	t <sub>CDS6</sub>	—	(5)	—	ns
(7), (8)	ADCLK t <sub>WH</sub> min./t <sub>WL</sub> min	t <sub>CDS7, 8</sub>	11	—	—	ns
(9)	ADCLK rising to digital output holding time	t <sub>CHLD9</sub>	—	(7)	—	ns
(10)	ADCLK rising to digital output delay time	t <sub>COD10</sub>	—	(16)	—	ns

OBP Detailed Timing Specifications

Figure 4 shows the OBP detailed timing specifications.

The OB period is from the fifth to the twelfth clock cycle after the OB pulse is inputted. The average of the black signal level is taken for eight input cycles during the OB period and it becomes the clamp level (DC standard).

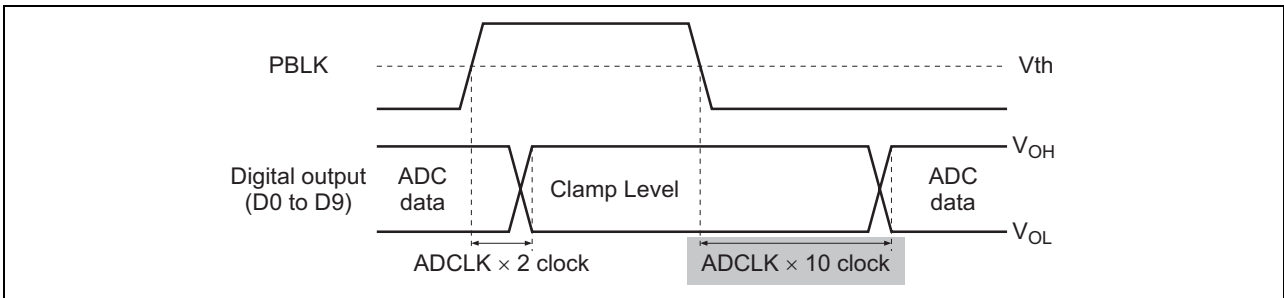

Figure 4 OBP Detailed Timing Specifications

**Detailed Timing Specifications at Pre-Blanking**

Figure 5 shows the pre-blanking detailed timing specifications.

**Figure 5 Detailed Timing Specifications at Pre-Blanking**

**Detailed Timing Specifications when ADC\_in Input Mode is Used**

Figure 6 shows the detailed timing chart when ADC\_in input mode is used, and table 9 shows each timing specification.

**Figure 6 Detailed Timing Chart when ADC\_in Input Mode is Used**

**Table 9 Timing Specifications when ADC\_in Input Mode is Used**

No.	Timing	Symbol	Min	Typ	Max	Unit
(1)	Signal fetch time	$t_{ADC1}$	—	(6)	—	ns
(2), (3)	ADCLK $t_{WH}$ min./ $t_{WL}$ min.	$t_{ADC2,3}$	$Typ \times 0.85$	$1/2f_{ADCLK}$	$Typ \times 1.15$	ns
(4)	ADCLK rising to digital output hold time	$t_{AHL4}$	—	(14.5)	—	ns
(5)	ADCLK rising to digital output delay time	$t_{AOD5}$	—	(23.5)	—	ns

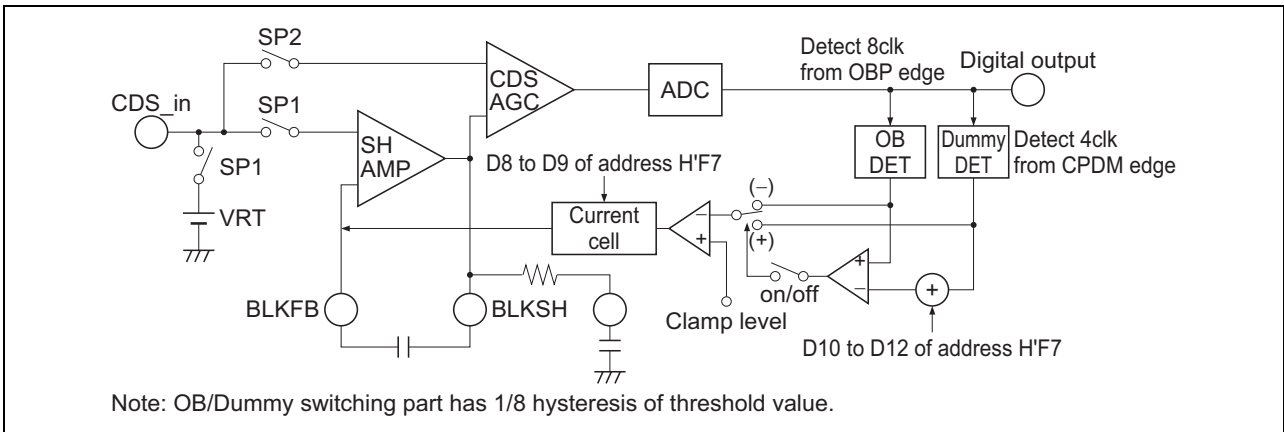

**Dummy Clamp**

It adjusts the mis-clamp which occurs when taking the photo under the highlight conditions. (Like a sun) Normally it works with the OB clamp, however when black level is out of the range caused by highlight enter to OB part, it changes to clamp processing by dummy bit level. Resister settings are follows.

D12, D11, D10 (Dummy CP) of address H'F7  
 0, 0, 0 ; OFF  
 0, 0, 1 ; +32  
 0, 1, 0 ; +64  
 0, 1, 1 ; +96  
 :  
 :  
 1, 1, 1 ; +224

D8, D9 (DMCG) of address H'F7  
 The amount of feed back current can be reduced with only dummy clamp.  
 Data = 0:1/4  
 1:1/8  
 2:1/16  
 3:1/32

The amount of offset are changes automatically depends on PGA gain in the LSI.

**Figure 7 Internal Bias Circuitry**

**Absolute Maximum Ratings**

(Ta = 25°C)

Item	Symbol	Ratings	Unit
Power supply voltage	Vdd(max)	4.1	V
Power dissipation	Pt(max)	500	mW
Operating power supply voltage	Vopr	2.70 to 3.45	V
Analog input voltage	V <sub>IN</sub> (max)	-0.3 to AVdd +0.3	V
Digital input voltage	V <sub>I</sub> (max)	-0.3 to DVdd +0.3	V
Operating temperature	Topr	-10 to +75	°C
Storage temperature	Tstg	-55 to +125	°C

Note: AVdd, AVss are analog power source systems of CDS, PGA, and ADC.

DVdd1, DVss1 are digital power source systems of CDS, PGA and ADC.

DVdd2, DVss2 are buffer power source systems of ADC output.

DVdd3, DVss3 are general digital power source systems of TG.

DVdd4, DVss4 are buffer power source systems of H1 and H2.

- Pin 2 multi bonds the DVss1 and DVss2
- When pin 64 is set to Low, pin 41 = STROB output, pin 39 = SUB\_SW output  
When Hi, pin 41 = Vgate input, pin 39 = ADCLK input

**Electrical Characteristics**

 (Unless specified, Ta = 25°C, AVdd = 3.0 V, DVdd = 3.0 V, and R<sub>BIAS</sub> = 33 kΩ)

- Items Common to CDS\_in and ADC\_in Input Modes

Item	Symbol	Min	Typ	Max	Unit	Test Conditions	Remarks

Serial Interface Specifications

Timing Specifications

Figure 8 Serial Interface Timing Specifications

Item	Min	Max
$f_{SCK}$	—	5 MHz
$t_{INT1,2}$	50 ns	—
$t_{su}$	50 ns	—
$t_{ho}$	50 ns	—

- Notes:
1. 3 byte continuous communications.
  2. Input SCK with 24 clock when CS is Low.
  3. It becomes invalid when data communications are stopped on the way.
  4. Data becomes a default with hardware reset.
  5. Input more than double frequency of SCK to the CLK\_in when transfer the serial data.

The Kind of Data

Data address has 256 type. H'00 to H'FF

H'00  
⋮  
H'EF

Data at timing generator part

H'F0  
⋮  
H'FF

Data at CDS part

Address map of each data referred to other sheet.

Details of timing generator refer to the timing chart on the other sheet together with this specification.

This specification only explains about the data of CDS part.

**Explanation of Serial Data of CDS Part**

Serial data of CDS part are assigned to address H'F0 to H'F8. Functions are follows.

Address								STD1[7:0] (L)							STD2[15:8] (H)							
1	1	1	1	0	0	0	0	D7	D6	D5	D4	D3	D2	D1	D0	D15	D14	D13				
								PGA gain							test_I1							

- PGA gain (D0 to D7 of address H'F0)

Details are referred to page 6 block diagram.

At CDS\_in mode:  $-2.36 \text{ dB} + 0.132 \text{ dB} \times N$  (Log linear)

At ADC\_in mode:  $0.57 \text{ times} + 0.01784 \text{ times} \times N$  (Times linear)

\*: Full-scale digital output is defined as 0 dB when 1 V is input.

Above PGA gain definition means input signal 1 Vp-p to CDS\_in, and set N = 18 (correspond 2.36 dB), and then PGA outputs the 2 V full-range, and also ADC outputs the full code (1023).

This mean offset gain of PGA has  $6 \text{ dB} - 2.36 \text{ dB} = 3.64 \text{ dB}$ , therefore it should be decided that how much dB add on.

**Figure 9 Level Dia of PGA**

- Test\_I1 (D13 to D15 of address H'F0)

It controls the standard current of analog amplifier systems of CDS, PGA. Use data = 4 (D15 = 1) normally.

When data = 0, 50% current value with default

When data = 4, default

When data = 7, 150% current value with default

Address								STD1[7:0] (L)							STD2[15:8] (H)																
1	1	1	1	0	0	0	1				D4	D3	D2	D1	D0	D15	D14	D13	D12	D11	D10	D9	D8								
															test_I2			SHSW_fsel				SHA_fsel									
															test_I0		MINV		LINV		STBY		SLP								

- SLP and STBY (D0, D1 of address H'F1)

SLP: Stop the all circuit. Consumption current of CDS part is less than 10  $\mu$ A. Start up from offset calibration when recover is needed.

STBY: Only the standard voltage generating circuit is operated. Consumption current of CDS part is about 3 mA. Allow 50 H time for feedback clamp is stabilized until recover.

## HD49351BP/HBP

- Output mode (D2 to D4 of address H'F1 and address H'F4 of D6)  
It is a test mode. Combination details are page 8. Normally set to all 0.
- SHA-fsel (D8 to D9 of address H'F1)  
It is a LPF switching of SH amplifier. Frequency characteristics are referred to page 9. To get rough idea, set the double cut off frequency point with using.
- SHSW-fsel (D10 to D13 of address H'F1)  
It is a time constant which sampling the black level of SH amplifier. Frequency characteristics are referred to page 9. To get rough idea, set the double cut off frequency point with using. S/N changes by this data, so find the appropriate point with set data to up/down.
- Test\_I2 (D14 to D15 of address H'F1)  
Current of ADC analog part can be set minutely. Normally use data = 0.
  - 0: Default (100%)
  - 1: 150%
  - 2: 50%
  - 3: 80%

Address								STD1[7:0] (L)							STD2[15:8] (H)								
1	1	1	1	0	0	1	0				D4	D3	D2	D1	D0	D15	D14	D13	D12	D11	D10	D9	D8
								Clamp level							Reset	AD_sel	CDS_buff	Low_pwr	HGain-Nsel			HGstop-Hsel	

- Clamp (D0 to D4 of address H'F2)  
Determine the OB part level with digital code of ADC output.  
Clamp level = setting data  $\times$  2 + 14  
Default data is 9 = 32 LSB.
- HGstop-Hsel, HGain-Nsel (D8 to D11 of address H'F2)  
Determine the lead-in speed of OB clamp. Details are referred to page 7. PGA gain need to be changed for switch the high speed leading mode. Transfer the gain +1/-1 to previous field, its switch to high speed leading mode.
- Low\_PWR (D12 of address H'F2)  
Switch circuit current and frequency characteristic.  
Data = 0: 40 MHz guarantee  
Data = 1: 25 MHz guarantee
- ADSEL (D14 of address H'F2)  
Data = 0: Select CDS\_in  
Data = 1: Select ADC\_in
- Reset (D15 of address H'F2)  
Software reset.  
Data = 1: Normal  
Data = 0: Reset  
  
Offset calibration should be done when starting up with using this bit. Details are referred to page 23.

Address								STD1[7:0] (L)							STD2[15:8] (H)								
1	1	1	1	0	0	1	1	D7	D6	D5	D4	D3	D2	D1	D0	D15	D14	D13	D12	D11	D10	D9	D8

- Address H'F3 are all testing data.  
Normally set to all 0., or do not transfer the data.

## HD49351BP/HBP

- MON (D0 to D2 of address H'F4)  
Select the pulse which output to pin MON (pin 60).  

When D0 to D2: 0, Fix to Low	When 1, ADCLK
When 2, SP1	When 3, SP2
When 4, OBP	When 5, PBLK
When 6, CPDM	When 7, DLL_test
- H12Baff (D3 to D6 of address H'F4)  
Select the buffer size which output to pin H1A, H2A (pin 22, 26).  

D3: 2 mA buffer
D4: 4 mA buffer
D5: 10 mA buffer
D6: 14 mA buffer

Above data can be on/off individually. Default is D6 can be on only. (18 mA buffer)
- VD latch (D7 of address H'F4)  

Data = 0: Gain data is determined when CS rising
Data = 1: Gain data is determined when VD rising
- Gray (D8 to D9 of address H'F4)  
ADC output code can be change to following types. Differential code is mentioned to next page.

Gray Code [1]	Gray Code [0]	Output Code
0	0	Binary code
0	1	Gray code
1	0	Differential encoded binary
1	1	Differential encoded gray
- Gray\_test (D10 to D12 of address H'F4)  
Data which determine the differential code and standard phase of gray code.

## HD49351BP/HBP

- Gray code (D8 to D12 of address H'F4)  
 ADC output code can be change to following type by differential code gray SW (D9, D8).  
 Binary code at D8: 0, Gray code at D8: 1  
 Normal at D9: 0, differential code at D9: 1

Differential code and gray code are recommended for this countermeasure. Figure 10 indicates circuit block. When luminance signal changes are smoothly, the number of bit of switching digital output bit can be reduced and easily to reduce the ripple using this function. This function is especially effective for longer the settings of sensor more than  $\text{clk} = 30 \text{ MHz}$ , and ADC output.

Figure 12 indicates the timing specifications.

Standard Phase (D10)	Standard Phase (D11)	Standard Data Output timing at Selecting the Differential Code	adck phase (D12): ADCK polar to OBP When 0: Select positive edge When 1: Select negative edge
0	0	Third and fourth	
1	0	Fourth and fifth	
0	1	Fifth and sixth	
1	1	Sixth and seventh	

Note: Color filter is different1 in the number of pixels with odd number and even number therefore first 2 pixels should be standard.

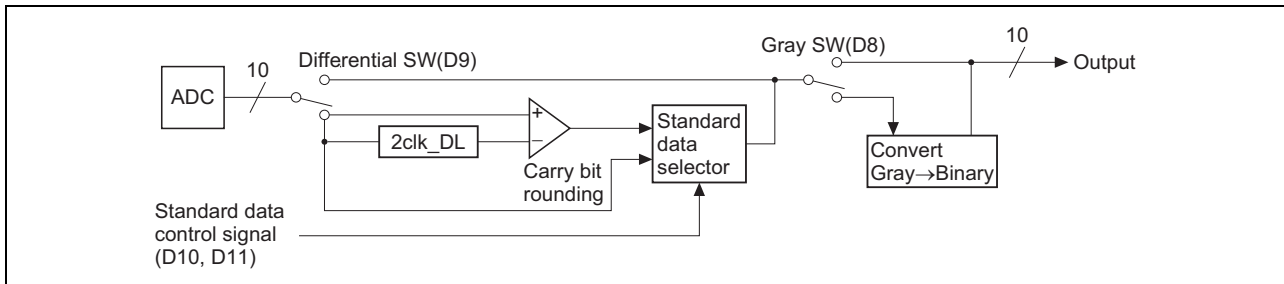

Figure 10 Differential Code and Gray Code Circuit

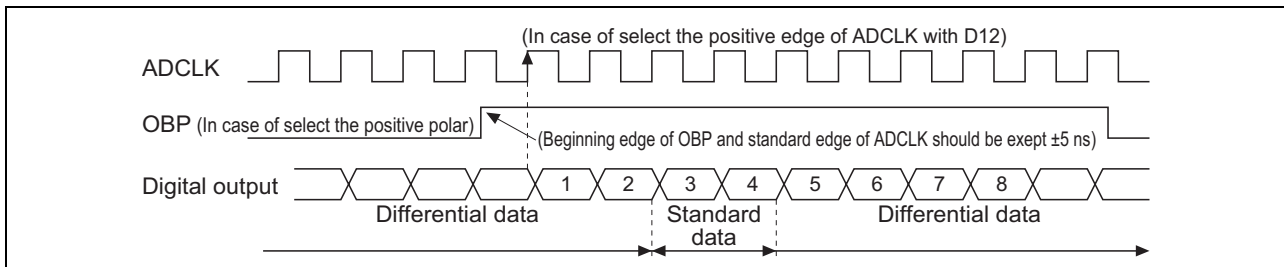

Figure 11 Timing Specification of Differential Code

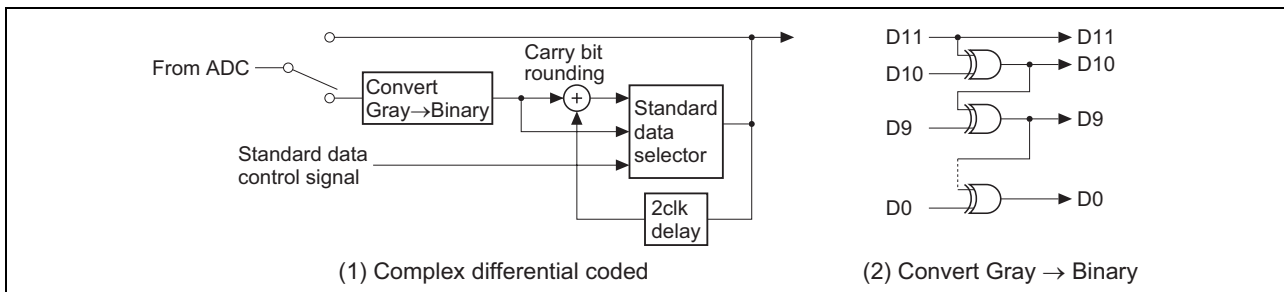

Figure 12 Complex Circuit Example at the DSP Side

- Address H’F5 sets the DLL delay time and selects the 1/4 phase. Details are on the next page. And D15 of address H’F8 can switch 2/3 divided mode but ensure that this address data relative to valid/invalid.

	D15 of address H’F8 = 0	D15 of address H’F8 = 1
Divided mode	Select the 2 divided, 1/4 phase	Select the 3 divided, 1/6 phase
D0 to D7 of address H’F5	Valid	Invalid
D0 to D14 of address H’F8	Invalid	Valid

- Phase settings of high speed pulse (address H’F5 to H’F8)
  - Select the 1/4 phase from figure 13 at 2 divided mode (D15 = 0 of address H’F8).  
Select the 1/6 phase from figure 14 at 3 divided mode (D15 = 1 of address H’F8).  
.....P\_SP1, P\_SP2, P\_ADCLK, P\_RG
  - Then select the necessary delay time from figure 15.  
.....DL\_SP1, DL\_SP2, DL\_RG, DL\_ADCLK  
RG can be set both of rising / falling edge optionally.

Figure 13 2 Divided Mode, 1/4 Phase Select (Valid at D15 = 0 of address H’F8)

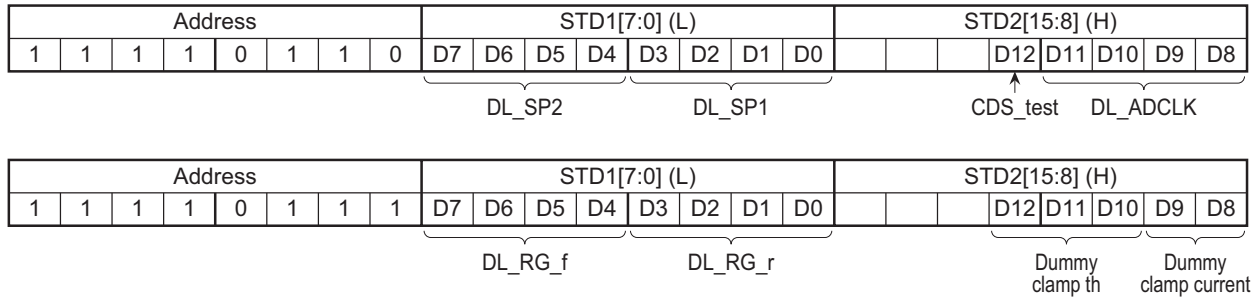

Figure 14 3 Divided Mode, 1/6 Phase Select (Valid at D15 = 1 of address H’F8)

**Default Value of Each Phases**

	P_SP1	P_SP2	P_ADCLK	P_RG
2 divided mode	1	2	1	0
3 divided mode	0	3	1	5

Note: 50% of duty pulse makes tr, tf of RG by DLL.

(3) Setting method of DLL

Figure 15 Analog Delay (DLL) Circuit Block.

- CDS\_test (D12 of address H'F6)  
It is testing data. Normally set to 0.
- Dummy clamp current (D9 to 8 of address H'F7)
 

Data =	When 0, 1/4	When 1, 1/8
	When 2, 1/16	When 3, 1/32

 Details are refer to page 13.
- Dummy clamp threshold (D12 to 10 of address H'F7)
 

Data =	When 0, off	When 1, +32
	When 2, +64	When 3, +96
	When 4, +128	When 5, +160
	When 6, +192	When 7, +224

 Details are refer to page 13.

Operation Sequence at Power On

Figure 16 Operation Sequence at Power On

Timing Specifications of High Speed Pulse

Item	two			Unit
	min	typ	max	
H1/H2 overlap	12	20	—	ns

Power supply specification of H1, H2, RG are 3.0 V to 3.3 V. Values are sensor CLK = when 18 MHz.

**Notice for Use**

1. Careful handling is necessary to prevent damage due to static electricity.
2. This product has been developed for consumer applications, and should not be used in non-consumer applications.
3. As this IC is sensitive to power line noise, the ground impedance should be kept as small as possible. Also, to prevent latchup, a ceramic capacitor of 0.1  $\mu\text{F}$  or more and an electrolytic capacitor of 10  $\mu\text{F}$  or more should be inserted between the ground and power supply.
4. Common connection of  $\text{AV}_{\text{DD}}$  and  $\text{DV}_{\text{DD}}$  should be made off-chip. If  $\text{AV}_{\text{DD}}$  and  $\text{DV}_{\text{DD}}$  are isolated by a noise filter, the phase difference should be 0.3 V or less at power-on and 0.1 V or less during operation.
5. If a noise filter is necessary, make a common connection after passage through the filter, as shown in the figure below.

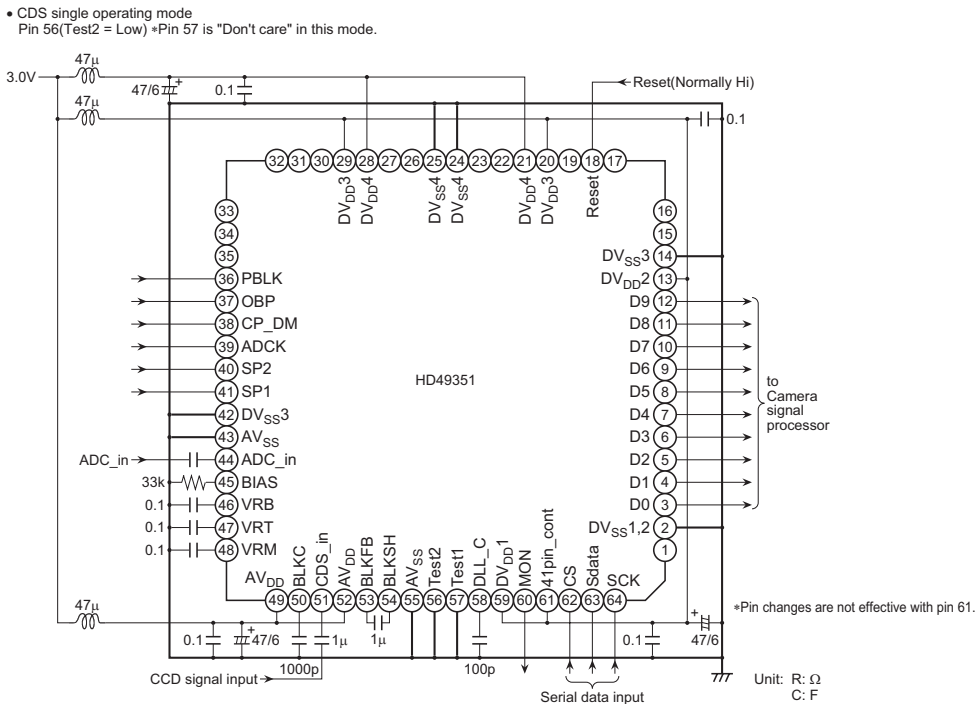

6. Connect  $\text{AV}_{\text{SS}}$  and  $\text{DV}_{\text{SS}}$  off-chip using a common ground. If there are separate analog system and digital system set grounds, connect to the analog system.
7. When  $\text{V}_{\text{DD}}$  is specified in the data sheet, this indicates  $\text{AV}_{\text{DD}}$  and  $\text{DV}_{\text{DD}}$ .
8. No Connection (NC) pins are not connected inside the IC, but it is recommended that they be connected to power supply or ground pins or left open to prevent crosstalk in adjacent analog pins.
9. To ensure low thermal resistance of the package, a Cu-type lead material is used. As this material is less tolerant of bending than Fe-type lead material, careful handling is necessary.
10. The infrared reflow soldering method should be used to mount the chip. Note that general heating methods such as solder dipping cannot be used.
11. Serial communication should not be performed during the effective video period, since this will result in degraded picture quality. Also, use of dedicated ports is recommended for the SCK and SDATA signals used in the HD49330AF. If ports are to be shared with another IC, picture quality should first be thoroughly checked.
12. At power-on, automatic adjustment of the offset voltage generated from PGA, ADC, etc., must be implemented in accordance with the power-on operating sequence (see page 23).
13. Ripple noise of DC/DC converter which generates the voltage of analog part should set under  $-50$  dB with power supply voltage.

Example of Recommended External Circuit

# HD49351BP/HBP

Serial data when CDS single operation mode are following register specifications.

Package Dimensions

Unit: mm

Package Code	TFBGA0606-65
JEDEC	—
JEITA	—
Mass (reference value)	0.056 g

**Renesas Technology Corp.** Sales Strategic Planning Div. Nippon Bldg., 2-6-2, Ohte-machi, Chiyoda-ku, Tokyo 100-0004, Japan

---

Keep safety first in your circuit designs!

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage.  
Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
  2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
  3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.  
The information described here may contain technical inaccuracies or typographical errors.  
Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.  
Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (<http://www.renesas.com>).
  4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
  5. Renesas Technology Corp. semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
  6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.
  7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.  
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
  8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
