

1. Overview

1.1 Features

The M16C Family offers a robust platform of 32-/16-bit CISC microcomputers (MCUs) featuring high ROM code efficiency, extensive EMI/EMS noise immunity, ultra-low power consumption, high-speed processing in actual applications, and numerous and varied integrated peripherals. Extensive device scalability from low- to high-end, featuring a single architecture as well as compatible pin assignments and peripheral functions, provides support for a vast range of application fields.

The R32C/100 Series is a high-end microcontroller series in the M16C Family. With a 4-Gbyte memory space, it achieves maximum code efficiency and high-speed processing with 32-bit CISC architecture, multiplier, multiply-accumulate unit, and floating point unit. The selection from the broadest choice of on-chip peripheral devices — UART, CRC, DMAC, A/D and D/A converters, timers, I²C-bus interface, and watchdog timer enables to minimize external components.

The R32C/151 Group is the MCU specific to vehicle networks within the R32C/100 Series. This product, provided as 144-pin plastic molded LQFP package, has two channels of CAN module, eight channels of LIN module, and standard peripherals.

1.1.1 Applications

Automotive, communication equipment, industrial equipment, etc.

1.1.2 Performance Overview

Tables 1.1 and 1.2 show the performance overview of the R32C/151 Group.

Table 1.1 Performance Overview (1/2)

Unit	Function	Explanation
CPU	Central processing unit	R32C/100 Series CPU Core <ul style="list-style-type: none"> • Basic instructions: 108 • Minimum instruction execution time: 15.625 ns ($f(\text{CPU}) = 64 \text{ MHz}$) • Multiplier: 32-bit \times 32-bit \rightarrow 64-bit • Multiply-accumulate unit: 32-bit \times 32-bit + 64-bit \rightarrow 64-bit • IEEE-754 compatible FPU: Single precision • 32-bit barrel shifter • Operating mode: Single-chip mode

1.5 Pin Definitions and Functions

Table 1.8 to Table 1.10 show the pin definitions and functions.

Table 1.8 Pin Definitions and Functions (1/3)

Function	Symbol	I/O	Description
Power supply	VCC, VSS	I	Applicable as follows: VCC = 3.0 to 5.5 V, VSS = 0 V
Analog power supply	AVCC, AVSS	I	Power supply for the A/D converter. AVCC and AVSS should be connected to VCC and VSS, respectively
Connecting pins for decoupling capacitor	VDC0, VDC1	—	A decoupling capacitor for internal voltage should be connected between VDC0 and VDC1
Reset input	RESET	I	The MCU is reset when this pin is driven low
CNVSS	CNVSS	I	This pin should be connected to VSS via a resistor
Debug port	NSD	I/O	This pin is to communicate with a debugger. It should be connected to VCC via a resistor of 1 to 4.7 k Ω
Main clock input	XIN	I	Input/output for the main clock oscillator. A crystal, or a ceramic resonator should be connected between pins XIN and XOUT. An external clock should be input at the XIN while leaving the XOUT open
Main clock output	XOUT	O	
Sub clock input	XCIN	I	Input/output for the sub clock oscillator. A crystal oscillator should be connected between pins XCIN and XCOU. An external clock should be input at the XCIN while leaving the XCOU open
Sub clock output	XCOU	O	
Clock output	CLKOUT	O	Output of the clock with the same frequency as low speed clocks, f8, or f32
External interrupt input	INT0 to INT8	I	Input for external interrupts
NMI input	P8_5/NMI	I	Input for NMI
Key input interrupt	KI0 to KI3	I	Input for the key input interrupt

Each port can be programmed to input or output under the control of the direction register. Pull-up resistors are selected for the following 4-pin units: Pi_0 to Pi_3 and Pi_4 to Pi_7 (i = 0 to 15); however, they are enabled only for the input pins
Input port	P14_1	I	Input port in CMOS. Pull-up resistors are selectable for P14_1 and P14_3
Timer A	TA0OUT to TA4OUT	I/O	Timers A0 to A4 input/output
	TA0IN to TA4IN	I	Timers A0 to A4 input
Timer B	TB0IN to TB5IN	I	Timers B0 to B5 input
Three-phase motor control timer output	U, \bar{U} , V, \bar{V} , W, \bar{W}	O	Three-phase motor control timer output
Serial interface	$\overline{CTS0}$ to $\overline{CTS4}$	I	Handshake input
	$\overline{RTS0}$ to $\overline{RTS4}$	O	Handshake output
	CLK0 to CLK4	I/O	Transmit/receive clock input/output
	RXD0 to RXD4	I	Serial data input
	TXD0 to TXD4	O	Serial data output
I ² C-bus (simplified)	SDA0 to SDA2	I/O	Serial data input/output
	SCL0 to SCL2	I/O	Transmit/receive clock input/output
Serial interface special functions	STXD0 to STXD2	O	Serial data output in slave mode
	SRXD0 to SRXD2	I	Serial data input in slave mode
	$\overline{SS0}$ to $\overline{SS2}$	I	Input to control serial interface special functions

Function	Symbol	I/O	Description
A/D converter	AN_0 to AN_7, AN0_0 to AN0_7, AN2_0 to AN2_7, AN15_0 to AN15_7	I	Analog input for the A/D converter
	ADTRG	I	External trigger input for the A/D converter
	ANEX0	I/O	Expanded analog input for the A/D converter and output in external op-amp connection mode
	ANEX1	I	Expanded analog input for the A/D converter
D/A converter	DA0, DA1	O	Output for the D/A converter
Reference voltage input	VREF	I	Reference voltage input for the A/D converter and D/A converter
Intelligent I/O	IIO0_0 to IIO0_7	I/O	Input/output for Intelligent I/O group 0. Either input capture or output compare is selectable
	IIO1_0 to IIO1_7	I/O	Input/output for Intelligent I/O group 1. Either input capture or output compare is selectable
	IIO2_0 to IIO2_7	I/O	Input/output for Intelligent I/O group 2. Either input capture or output compare is selectable
	IIO3_0 to IIO3_7	I/O	Input/output for Intelligent I/O group 3. Either input capture or output compare is selectable
	UD0A, UD1A, UD0B, UD1B	I	Input for the two-phase encoder
Serial bus interface	SSO0 to SSO2	I/O	Serial data output. Functions as serial data input/output in 4-wire serial bus mode
	SSI0 to SSI2	I/O	Serial data input. Functions as serial data input/output in 4-wire serial bus mode
	SSCK0 to SSCK2	I/O	Transmit/receive clock input/output
	SCS0 to SCS2	I/O	Input/output to control the synchronous serial interface
LIN module	LIN0_0OUT to LIN0_3OUT	O	Transmit data output for the LIN communications
	LIN0_0IN to LIN0_3IN	I	Receive data input for the LIN communications
	LIN1_0OUT to LIN1_3OUT	O	Transmit data output for the LIN communications
	LIN1_0IN to LIN1_3IN	I	Receive data input for the LIN communications
CAN module	CAN0IN, CAN1IN	I	Receive data input for the CAN communications
	CAN0OUT, CAN1OUT	O	Transmit data output for the CAN communications
	CAN0WU, CAN1WU	I	Input for the CAN wake-up interrupt

2. Central Processing Unit (CPU)

The CPU contains the registers shown below. There are two register banks each consisting of registers R2R0, R3R1, R6R4, R7R5, A0 to A3, SB, and FB.

Figure 2.1 CPU Registers

2.1 General Purpose Registers

2.1.1 Data Registers (R2R0, R3R1, R6R4, and R7R5)

These 32-bit registers are primarily used for transfers and arithmetic/logic operations.

Each of the registers can be divided into upper and lower 16-bit registers, e.g. R2R0 can be divided into R2 and R0, R3R1 can be divided into R3 and R1, etc.

Moreover, data registers R2R0 and R3R1 can be divided into four 8-bit data registers: upper (R2H and R3H), mid-upper (R2L and R3L), mid-lower (R0H and R1H), and lower (R0L and R1L).

2.1.2 Address Registers (A0, A1, A2, and A3)

These 32-bit registers have functions similar to data registers. They are also used for address register indirect addressing and address register relative addressing.

2.1.3 Static Base Register (SB)

This 32-bit register is used for SB relative addressing.

2.1.4 Frame Base Register (FB)

This 32-bit register is used for FB relative addressing.

2.1.5 Program Counter (PC)

This 32-bit counter indicates the address of the instruction to be executed next.

2.1.6 Interrupt Vector Table Base Register (INTB)

This 32-bit register indicates the start address of a relocatable vector table.

2.1.7 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

Two types of 32-bit stack pointers (SPs) are provided: user stack pointer (USP) and interrupt stack pointer (ISP).

Use the stack pointer select flag (U flag) to select either the user stack pointer (USP) or the interrupt stack pointer (ISP). The U flag is bit 7 in the flag register (FLG). Refer to 2.1.8 "Flag Register (FLG)" for details.

To minimize the overhead of interrupt sequence due to less memory access, set the user stack pointer (USP) or the interrupt stack pointer (ISP) to a multiple of 4.

2.1.8 Flag Register (FLG)

This 32-bit register indicates the CPU status.

2.1.8.1 Carry Flag (C flag)

This flag retains a carry, borrow, or shifted-out bit generated by the arithmetic logic unit (ALU).

2.1.8.2 Debug Flag (D flag)

This flag is only for debugging. Only set this bit to 0.

2.1.8.3 Zero Flag (Z flag)

This flag becomes 1 when the result of an operation is 0; otherwise it is 0.

2.1.8.4 Sign Flag (S flag)

This flag becomes 1 when the result of an operation is a negative value; otherwise it is 0.

2.1.8.5 Register Bank Select Flag (B flag)

This flag selects a register bank. It indicates 0 when register bank 0 is selected, and 1 when register bank 1 is selected.

2.1.8.6 Overflow Flag (O flag)

This flag becomes 1 when the result of an operation overflows; otherwise it is 0.

2.1.8.7 Interrupt Enable Flag (I flag)

This flag enables maskable interrupts. To disable maskable interrupts, set this flag to 0. To enable them, set this flag to 1. When an interrupt is accepted, the flag becomes 0.

2.1.8.8 Stack Pointer Select Flag (U flag)

To select the interrupt stack pointer (ISP), set this flag to 0. To select the user stack pointer (USP), set this flag to 1.

It becomes 0 when a hardware interrupt is accepted or when an INT instruction designated by a software interrupt number from 0 to 127 is executed.

2.1.8.9 Floating-point Underflow Flag (FU flag)

This flag becomes 1 when an underflow occurs in a floating-point operation; otherwise it is 0. It also becomes 1 when the operand contains invalid numbers (subnormal numbers).

2.1.8.10 Floating-point Overflow Flag (FO flag)

This flag becomes 1 when an overflow occurs in a floating-point operation; otherwise it is 0. It also becomes 1 when the operand contains invalid numbers (subnormal numbers).

2.1.8.11 Processor Interrupt Priority Level (IPL)

The processor interrupt priority level (IPL), consisting of 3 bits, selects a processor interrupt priority level from level 0 to 7. An interrupt is enabled when the interrupt request level is higher than the selected IPL.

When the processor interrupt priority level (IPL) is set to 111b (level 7), all interrupts are disabled.

2.1.8.12 Fixed-point Radix Point Designation Bit (DP bit)

This bit designates the radix point. It also specifies which portion of the fixed-point multiplication result to extract. It is used for the MULX instruction.

2.1.8.13 Floating-point Rounding Mode (RND)

The 2-bit floating-point rounding mode selects a rounding mode for floating-point calculation results.

2.1.8.14 Reserved

Only set this bit to 0. The read value is undefined.

2.2 Fast Interrupt Registers

The following three registers are provided to minimize the overhead of the interrupt sequence.

2.2.1 Save Flag Register (SVF)

This 32-bit register is used to save the flag register when a fast interrupt occurs.

2.2.2 Save PC Register (SVP)

This 32-bit register is used to save the program counter when a fast interrupt occurs.

2.2.3 Vector Register (VCT)

This 32-bit register is used to indicate a jump address when a fast interrupt occurs.

2.3 DMAC-associated Registers

There are seven types of DMAC-associated registers.

2.3.1 DMA Mode Registers (DMD0, DMD1, DMD2, and DMD3)

These 32-bit registers are used to set DMA transfer mode, bit rate, etc.

2.3.2 DMA Terminal Count Registers (DCT0, DCT1, DCT2, and DCT3)

These 24-bit registers are used to set the number of DMA transfers.

2.3.3 DMA Terminal Count Reload Registers (DCR0, DCR1, DCR2, and DCR3)

These 24-bit registers are used to set the reloaded values for DMA terminal count registers.

2.3.4 DMA Source Address Registers (DSA0, DSA1, DSA2, and DSA3)

These 32-bit registers are used to set DMA source addresses.

2.3.5 DMA Source Address Reload Registers (DSR0, DSR1, DSR2, and DSR3)

These 32-bit registers are used to set the reloaded values for DMA source address registers.

2.3.6 DMA Destination Address Registers (DDA0, DDA1, DDA2, and DDA3)

These 32-bit registers are used to set DMA destination addresses.

2.3.7 DMA Destination Address Reload Registers (DDR0, DDR1, DDR2, and DDR3)

These 32-bit registers are used to set reloaded values for DMA destination address registers.

3. Memory

Figure 3.1 shows the memory map of the R32C/151 Group.

The R32C/151 Group provides a 4-Gbyte address space from 00000000h to FFFFFFFFh.

The internal ROM is mapped from address FFFFFFFFh in the inferior direction. For example, the 1-Mbyte internal ROM is mapped from FFF00000h to FFFFFFFFh.

The fixed interrupt vector table contains the start address of interrupt handlers and is mapped from FFFFFFFDCh to FFFFFFFFh.

The internal RAM is mapped from address 00000400h in the superior direction. For example, the 48-Kbyte internal RAM is mapped from 00000400h to 0000C3FFh. Besides being used for data storage, the internal RAM functions as a stack(s) for subroutine calls and/or interrupt handlers.

Special function registers (SFRs), which are control registers for peripheral functions, are mapped from 00000000h to 000003FFh, and from 00040000h to 0004FFFFh. Unoccupied SFR locations are reserved, and no access is allowed.

4. Special Function Registers (SFRs)

SFRs are memory-mapped peripheral registers that control the operation of peripherals. Table 4.1 SFR List (1) to Table 4.59 SFR List (59) list the SFR details.

Note:

1. Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

		64-Kbyte block		0.20	3.0	s
—	Data retention ⁽²⁾	$T_a = 55^\circ\text{C}$ ^(3, 4)	20			Years

Notes:

1. Program/erase definition

This value represents the number of erasures per block.

When the number of program/erase cycles is n, each block can be erased n times.

For example, if a 4-word write is performed in 512 different addresses in the 4-Kbyte block A and then the block is erased, this is counted as a single program/erase operation.

However, the same address cannot be written to more than once per erasure (overwrite disabled).

2. Data retention includes periods when no supply voltage is applied and no clock is provided.

3. This data retention includes 3000 hours in $T_a = 125^\circ\text{C}$ and 7000 hours in $T_a = 85^\circ\text{C}$.

4. Contact a Renesas Electronics sales office for data retention times other than the above condition.

Notes:

1. Program/erase definition
This value represents the number of erasure per block.
When the number of program/erase cycles is n, each block can be erased n times.
For example, if a word write is performed in 16 different addresses in a block and then the block is erased, this is counted as a single program/erase operation. However, the same address cannot be written to more than once per erasure (overwrite disabled).
2. Data retention includes periods when no supply voltage is applied and no clock is provided.

			Chapter 1. Overview
		—	• Made minor text modifications to this chapter
		1	• Added “(MCUs)” to line 1 of 1.1
		3	• Changed the following expressions in Table 1.2 : “erase/program” to “program/erase”, “Read protection” to “Security protection”, “ID code check” to “ID code protect”, and “on-board flash re-programming” to “on-board flash programming”
		5	• Deleted hyphen before ROM number in Figure 1.1
		6	• Changed Figure 1.2
		7	• Modified “ $\overline{K13}$ ” to “ $\overline{K10}$ ” for pins 133 to 136 in Figure 1.3 to “ $\overline{K13}$ ” to “ $\overline{K10}$ ”
		10	• Corrected a typo “LIN // CAN Module Pin” in Table 1.6 to “LIN / CAN Module Pin”
		12-14	• Changed descriptions “Functional Category” and “Function” in Tables 1.8 to 1.10 to “Function” and “Description”, respectively
			Chapter 2. Central Processing Unit
		—	• Made major text modifications to this chapter
		15, 16	• Changed description “Interrupt table register” in Figure 2.1 and 2.1.6 to “Interrupt vector table base register”
			Chapter 3. Memory
		—	• Made major text modifications to this chapter
			Chapter 4. Special Function Registers
		20	• Changed hexadecimal format of reset values for registers CCR and FMCR in Table 4.1 to binary
		21-22	• Changed the following expressions “DMAi Interrupt” and “Start/Stop Condition” in Tables 4.2 to 4.3 to “DMAi Transfer Complete Interrupt” and “Start Condition/Stop Condition”, respectively
		26	• Deleted “6” from register name for register G2FS in Table 4.7
		29	• Changed binary format of reset values for U3RB and U4RB in Table 4.10 to hexadecimal
		31	• Changed register symbols “G3TMi/G0POj” in Table 4.12 to “G3TMi/G3POj”
		32	• Changed expression of register name “Xi Register Yi Register” and symbol “XiR, YiR” in Table 4.13 to “Xi Register/Yi Register” and “XiR/YiR”, respectively
		37	• Changed hexadecimal format of reset values for registers PDi in Table 4.18 to binary
		39	• Modified reset value for register PLS in Table 4.20 to “1XXX XX00b”
		41	• Modified reset value for register IFS7 in Table 4.22 to “XXXX XXX0b”
		41-43	• Modified register name “Port Pi_j Port Function Select Register” in Tables 4.22 to 4.24 to “Port Pi_j Function Select Register”

General Precautions in the Handling of MPU/MCU Products

The following usage notes are applicable to all MPU/MCU products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Handling of Unused Pins

Handle unused pins in accord with the directions given under Handling of Unused Pins in the manual.

- The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.

2. Processing at Power-on

The state of the product is undefined at the moment when power is supplied.

- The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.

In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

3. Prohibition of Access to Reserved Addresses

Access to reserved addresses is prohibited.

- The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.

4. Clock Signals

After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

- When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

5. Differences between Products

Before changing from one product to another, i.e. to a product with a different part number, confirm that the change will not lead to problems.

- The characteristics of an MPU or MCU in the same group but having a different part number may differ in terms of the internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
 2. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
 3. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
 4. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.
 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; and safety equipment etc.
Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.
 6. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
 7. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.
 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
 9. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.
 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document, Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.
 11. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.
(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
