Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: “Standard” and “High Quality”. The intended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below.
   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

   Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user’s manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user’s manuals, application notes, “General Notes for Handling and Using Semiconductor Devices” in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
(Note2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

1. Precaution against Electrostatic Discharge (ESD)

   A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

2. Processing at power-on

   The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

3. Input of signal during power-off state

   Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

4. Handling of unused pins

   Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

5. Clock signals

   After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

6. Voltage application waveform at input pin

   Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (Max.) and V_{IH} (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (Max.) and V_{IH} (Min.).

7. Prohibition of access to reserved addresses

   Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

8. Differences between products

   Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems. The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

Disclaimer

By using this Renesas Starter Kit+ (RSK+), the user accepts the following terms:

The RSK+ is not guaranteed to be error free, and the entire risk as to the results and performance of the RSK+ is assumed by the User. The RSK+ is provided by Renesas on an “as is” basis without warranty of any kind whether express or implied, including but not limited to the implied warranties of satisfactory quality, fitness for a particular purpose, title and non-infringement of intellectual property rights with regard to the RSK+. Renesas expressly disclaims all such warranties. Renesas or its affiliates shall in no event be liable for any loss of profit, loss of data, loss of contract, loss of business, damage to reputation or goodwill, any economic loss, any reprogramming or recall costs (whether the foregoing losses are direct or indirect) nor shall Renesas or its affiliates be liable for any other direct or indirect special, incidental or consequential damages arising out of or in relation to the use of this RSK+, even if Renesas or its affiliates have been advised of the possibility of such damages.

Precautions

The following precautions should be observed when operating any RSK+ product:

This Renesas Starter Kit+ is only intended for use in a laboratory environment under ambient temperature and humidity conditions. A safe separation distance should be used between this and any sensitive equipment. Its use outside the laboratory, classroom, study area or similar such area invalidates conformity with the protection requirements of the Electromagnetic Compatibility Directive and could lead to prosecution.

The product generates, uses, and can radiate radio frequency energy and may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment causes harmful interference to radio or television reception, which can be determined by turning the equipment off or on, you are encouraged to try to correct the interference by one or more of the following measures;

- ensure attached cables do not lie across the equipment
- reorient the receiving antenna
- increase the distance between the equipment and the receiver
- connect the equipment into an outlet on a circuit different from that which the receiver is connected
- power down the equipment when not in use
- consult the dealer or an experienced radio/TV technician for help NOTE: It is recommended that wherever possible shielded interface cables are used.

The product is potentially susceptible to certain EMC phenomena. To mitigate against them it is recommended that the following measures be undertaken;

- The user is advised that mobile phones should not be used within 10m of the product when in use.
- The user is advised to take ESD precautions when handling the equipment.

The Renesas Starter Kit does not represent an ideal reference design for an end product and does not fulfil the regulatory standards for an end product.

How to Use This Manual

1. Purpose and Target Readers

This manual is designed to provide the user with an understanding of the CPU Board hardware functionality, and electrical characteristics. It is intended for users designing sample code on the CPU Board platform, using the many different incorporated peripheral devices.

The manual comprises of an overview of the capabilities of the RSK+ product, but does not intend to be a guide to embedded programming or hardware design.

Particular attention should be paid to the precautionary notes when using the manual. These notes occur within the body of the text, at the end of each section, and in the Usage Notes section.

The revision history summarizes the locations of revisions and additions. It does not list all revisions. Refer to the text of the manual for details.

The following documents apply to the RX72M Group. Make sure to refer to the latest versions of these documents. The newest versions of the documents listed may be obtained from the Renesas Electronics Web site.

Document Type	Description	Document Title	Document No.
User's Manual	Describes the technical details of the RSK+ hardware.	Renesas Starter Kit+ for RX72M User's Manual	R20UT4391EG
Tutorial Manual	Provides a guide to setting up RSK+ environment, running sample code and debugging programs.	Renesas Starter Kit+ for RX72M Tutorial Manual	CS+: R20UT4384EG e^2 studio: R20UT4387EG
Quick Start Guide	Provides simple instructions to setup the RSK+ and run the first sample.	Renesas Starter Kit+ for RX72M Quick Start Guide	CS+: R20UT4385EG e^2 studio: R20UT4388EG

UART	Universal Asynchronous Receiver/Transmitter
USB	Universal Serial Bus
WDT	Watchdog Timer

Table of Contents

1. Overview

1.1 Purpose

This CPU Board is an evaluation tool for Renesas microcontrollers. This manual describes the technical details of the CPU Board hardware.

1.2 Features

This RSK+ provides an evaluation of the following features:

- Renesas microcontroller programming
- User code debugging
- User circuitry such as switches, LEDs and a potentiometer
- Sample applications
- Sample peripheral device initialisation code

The RSK+ board contains all the circuitry required for microcontroller operation.

1.3 Board specification

Board specification was shown in **Table 1-1** below.

Table 1-1: Board Specification

Item	Specification
Microcontroller	Part No : R5F572MNDDBD or R5F572MNHDBD *1
	Package : 224-pin LFBGA
	On-Chip Memory : ROM 4MB, RAM 1MB
On-Board Memory	SDRAM: 128Mbit (Data width 32bit)
	I²C EEPROM: 2Kbit
	I²C EEPROM: 16Kbit (For EtherCAT)
	SPI Serial Flash: 32Mbit x 2
Input Clock	RX72M Main : 24MHz
	RX72M Sub : 32.768kHz
	RL78/G1C Main: 12MHz
	Ethernet PHY (for RMII) : 50MHz
Power Supply	DC Power Jack : 5 V Input
	Power Supply IC : 5V Input, 3.3V Output
	Power Supply IC : 3.3V Input, 3.3V Output (For SDHI)
	Power Supply IC : 5V Input, 5V Output (For USB Host)
Debug Interface	E1/E2 Lite 14-pin box header
DIP Switch	Mode Configuration : 4-pole x 1
	For EtherCAT ID or User I/O : 8-pole x 1
Push Switch	Reset Switch x 1
	User Switch x 3
Potentiometer (for ADC)	Single-turn, 10kΩ
LED	5V Power indicator: green x 1
	3.3V Power Indicator : green x 1
	User : green x 1, orange x 1, red x 2
	Ethernet Status: green x 2, yellow x 2
	EtherCAT: green x 3, red x 1, green/red x 1
Ethernet	Connector : RJ45 x 2
	PHY : Single Channel PHY x 2
SDHI *2	SD Card Slot (4-bit) x 1
RS-485	Connector *3 : 2.54mm pitch, 6-pin x 1
	RS-485 Driver x1 (Full-Duplex)
CAN	Connector : 2.54mm pitch, 3-pin x 1
	CAN Driver : R2A25416SP *4 x 1
USB	USB0-Function : USB-MiniB
	USB0-Host : USB-TypeA
USB to Serial Converter Interface	Connector : USB-MiniB
	Driver : RL78/G1C Microcontroller (Part No R5F10JBCANA)
Pmod™	PMOD1 : Angle type, 12-pin Connector
	PMOD2 *3 : Straight type, 12-pin Connector
DSMIF	14-pin box header *3
Application Board Interface *3	2.54 mm pitch, 26-pin x 2 (JA1, JA2), 50-pin x 1 (JA3), 24-pin x 2 (JA5, JA6)

*1: R5F572MNDDBD does not have a built-in security function, but R5F572MNHDBD has a built-in security function.

*2: The RX72M Group incorporate an SD Host Interface (SDHI) which is compliant with the SD Specifications. When developing host devices that are compliant with the SD Specifications, the user must enter into the SD Host/Ancillary Product License Agreement (SD HALA).

*3: The connector is not included in the product.

*4: This CAN driver has Non-promotion status, so do not use this CAN driver on your system.

2. Power Supply

2.1 Requirements

This board has an optional centre-positive supply connector using a 2.0mm barrel power jack (PWR). The main power supply connected to PWR should supply a minimum of 10W to ensure full functionality. When the board is connected to another system then that system should supply power to the board.

This CPU board supports one external voltage input. Details of the external power supply connection are shown in **Table 2-1 and Table 2-2** below. The default power configuration is shown in **bold, blue text.**

Table 2-1: PWR connector Requirements

Connector	Supply voltage
PWR	Input 5VDC

There are RSK+ products which supports the 12V voltage input. Since this board is supporting the 5V voltage input, be careful not to connect the power supply of a high-voltage output accidentally.
Moreover, the main power supply connected to PWR should supply a minimum of 10W to ensure full functionality.

Table 2-2: Main Power Supply Requirements

J16[*1] Setting	Supply Source	Board_5V	UC_VCC
Open	**PWR connector**/JA1-5V/Unregulated_VCC	**5V**	**3.3V**
Shorted	VBUS0	5V	3.3V

[*1]: The connector is not fitted to the RSK+.

2.2 Power-Up Behaviour

When the RSK+ is purchased, the RSK+ board has the ‘Release’ build of the example tutorial software pre-programmed into the Renesas microcontroller. Please consult the ‘Renesas Starter Kit+ Smart Configurator Tutorial Manual’ for further information of this example.

3. Board Layout

3.1 Component Layout

Figure 3-1 below shows the top component layout of the board.

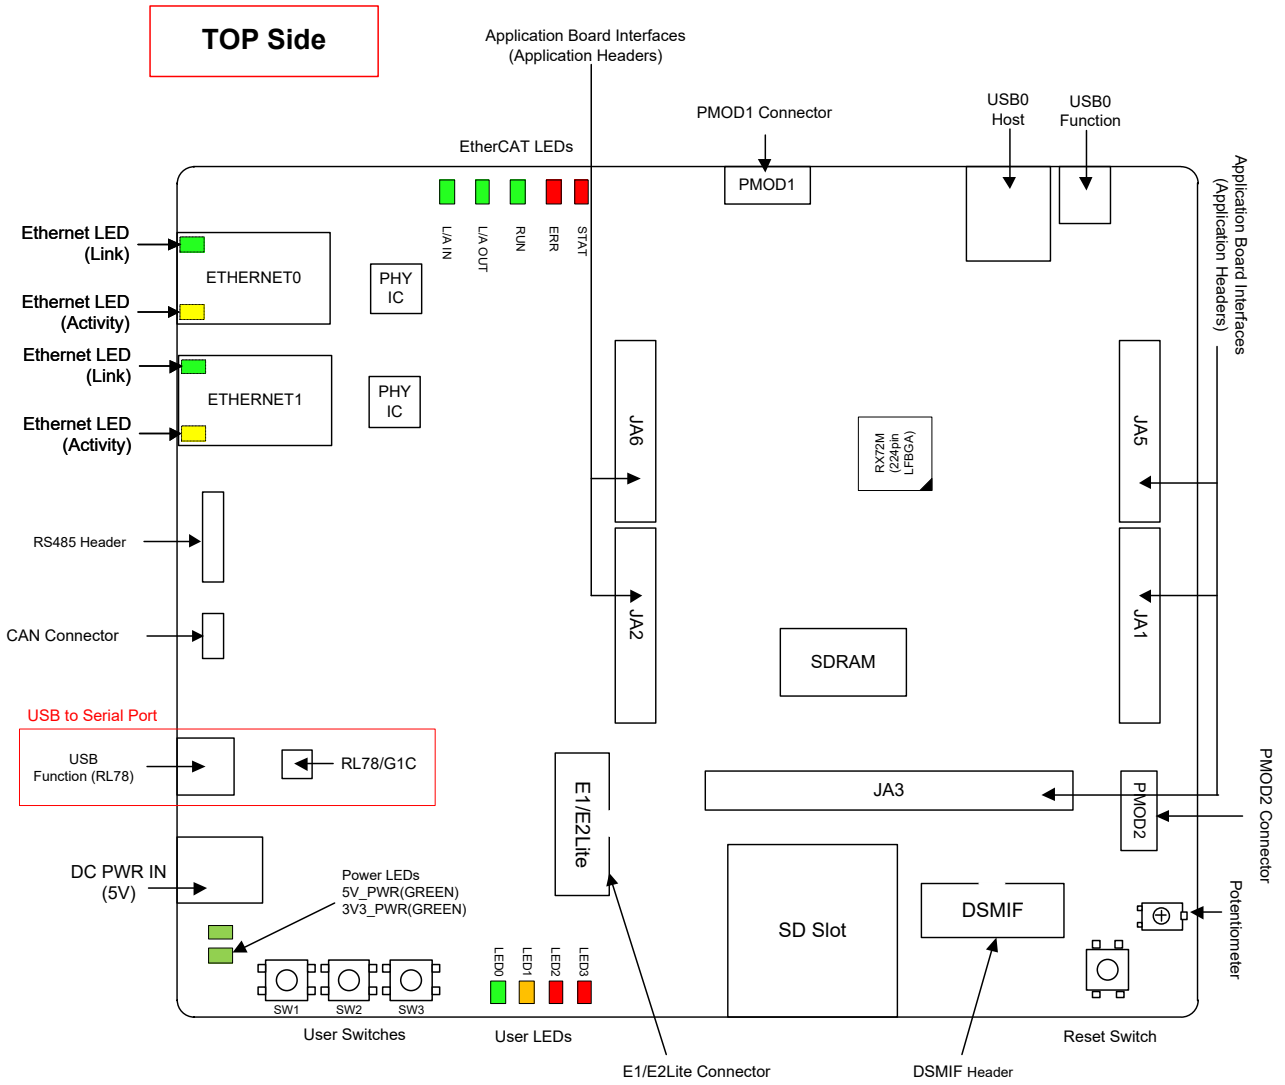

Figure 3-1: Board Layout

3.2 Board Dimensions

Figure 3-2 below gives the board dimensions and connector positions. All the through-hole connectors are on a common 2.54mm pitch grid for easy interfacing.

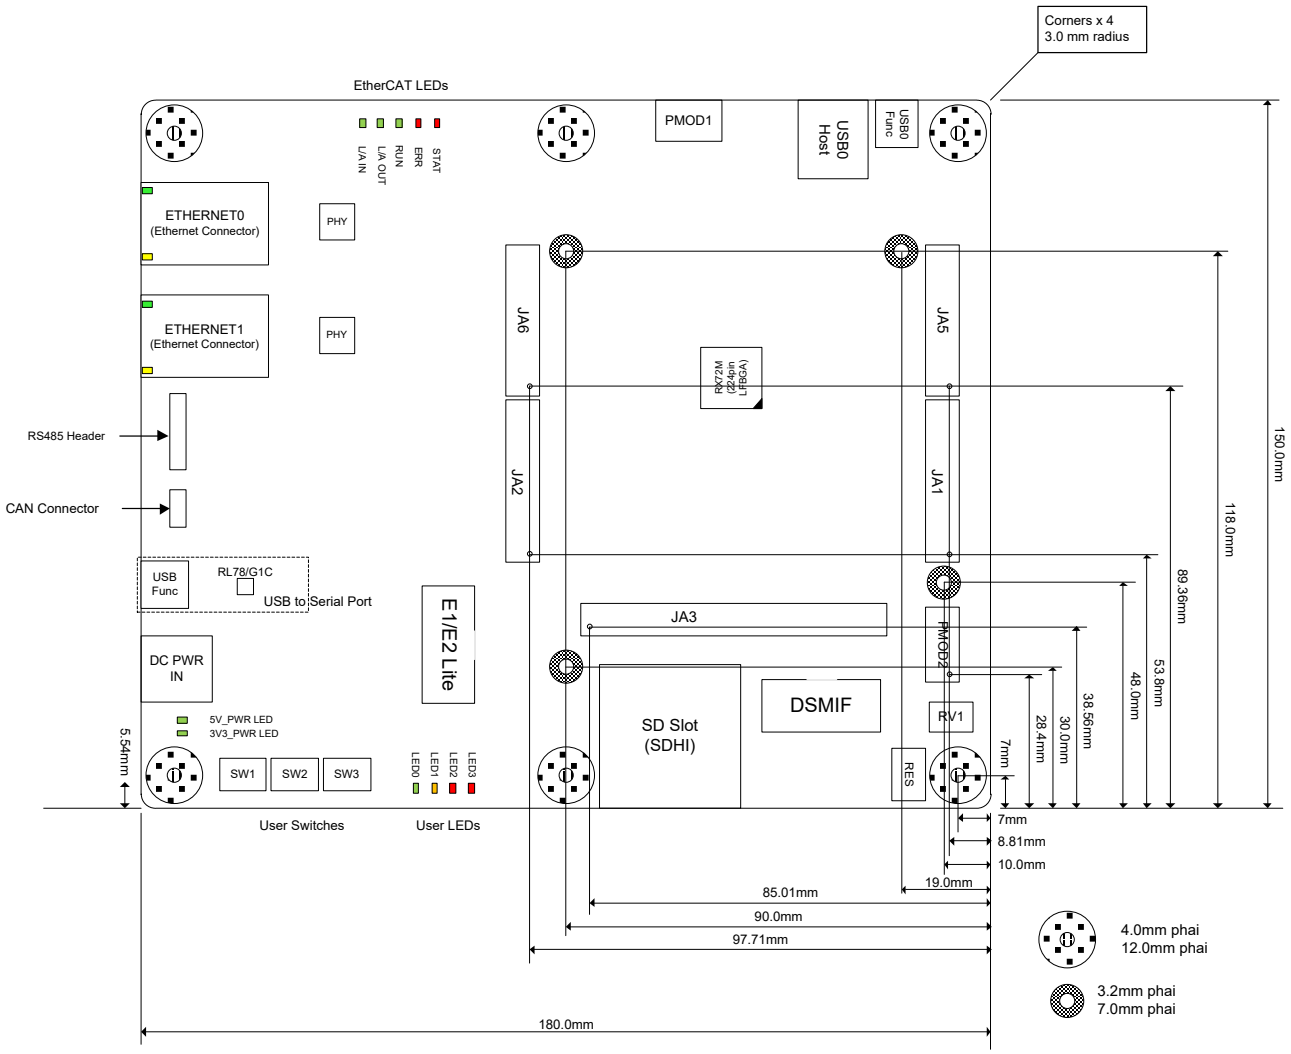

Figure 3-2: Board Dimensions

3.3 Component Placement

Figure 3-3 below shows placement of individual components on the top-side PCB – bottom-side component placement can be seen in **Figure 3-4**. Component types and values are shown on the board schematics.

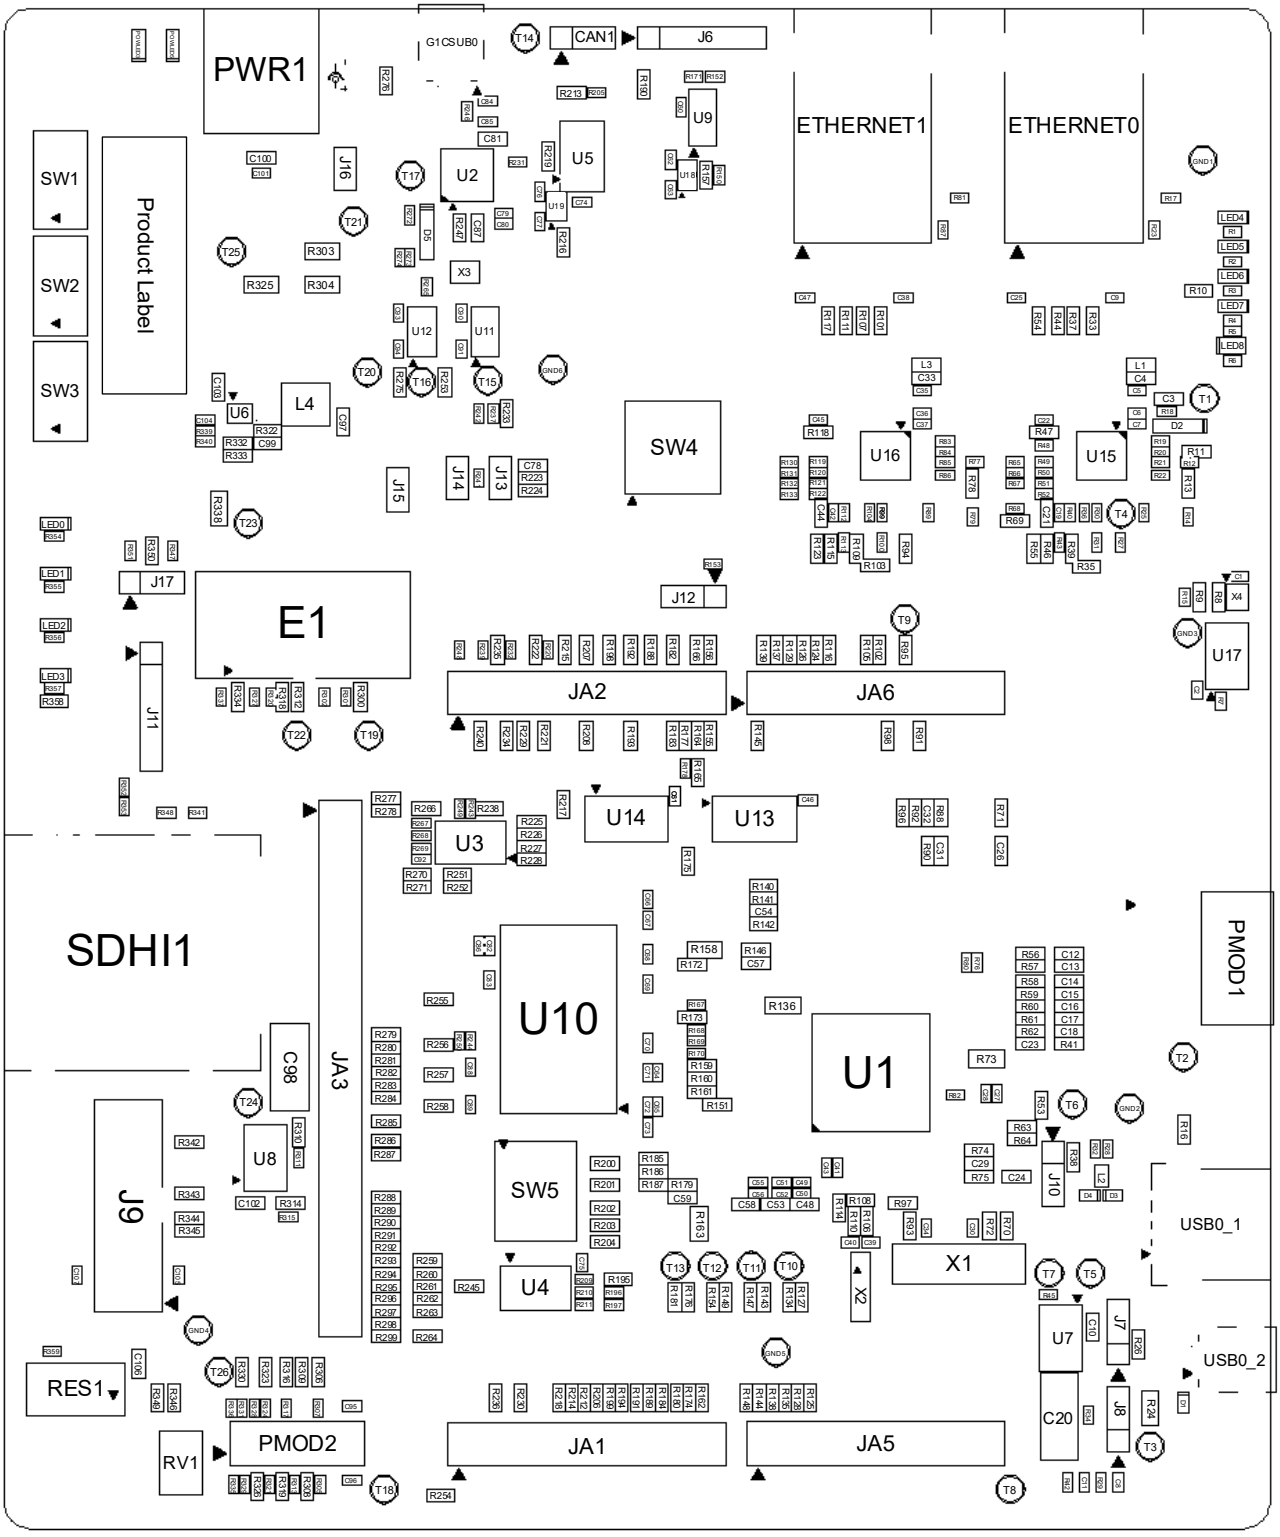

Figure 3-3: Top-Side Component Placement

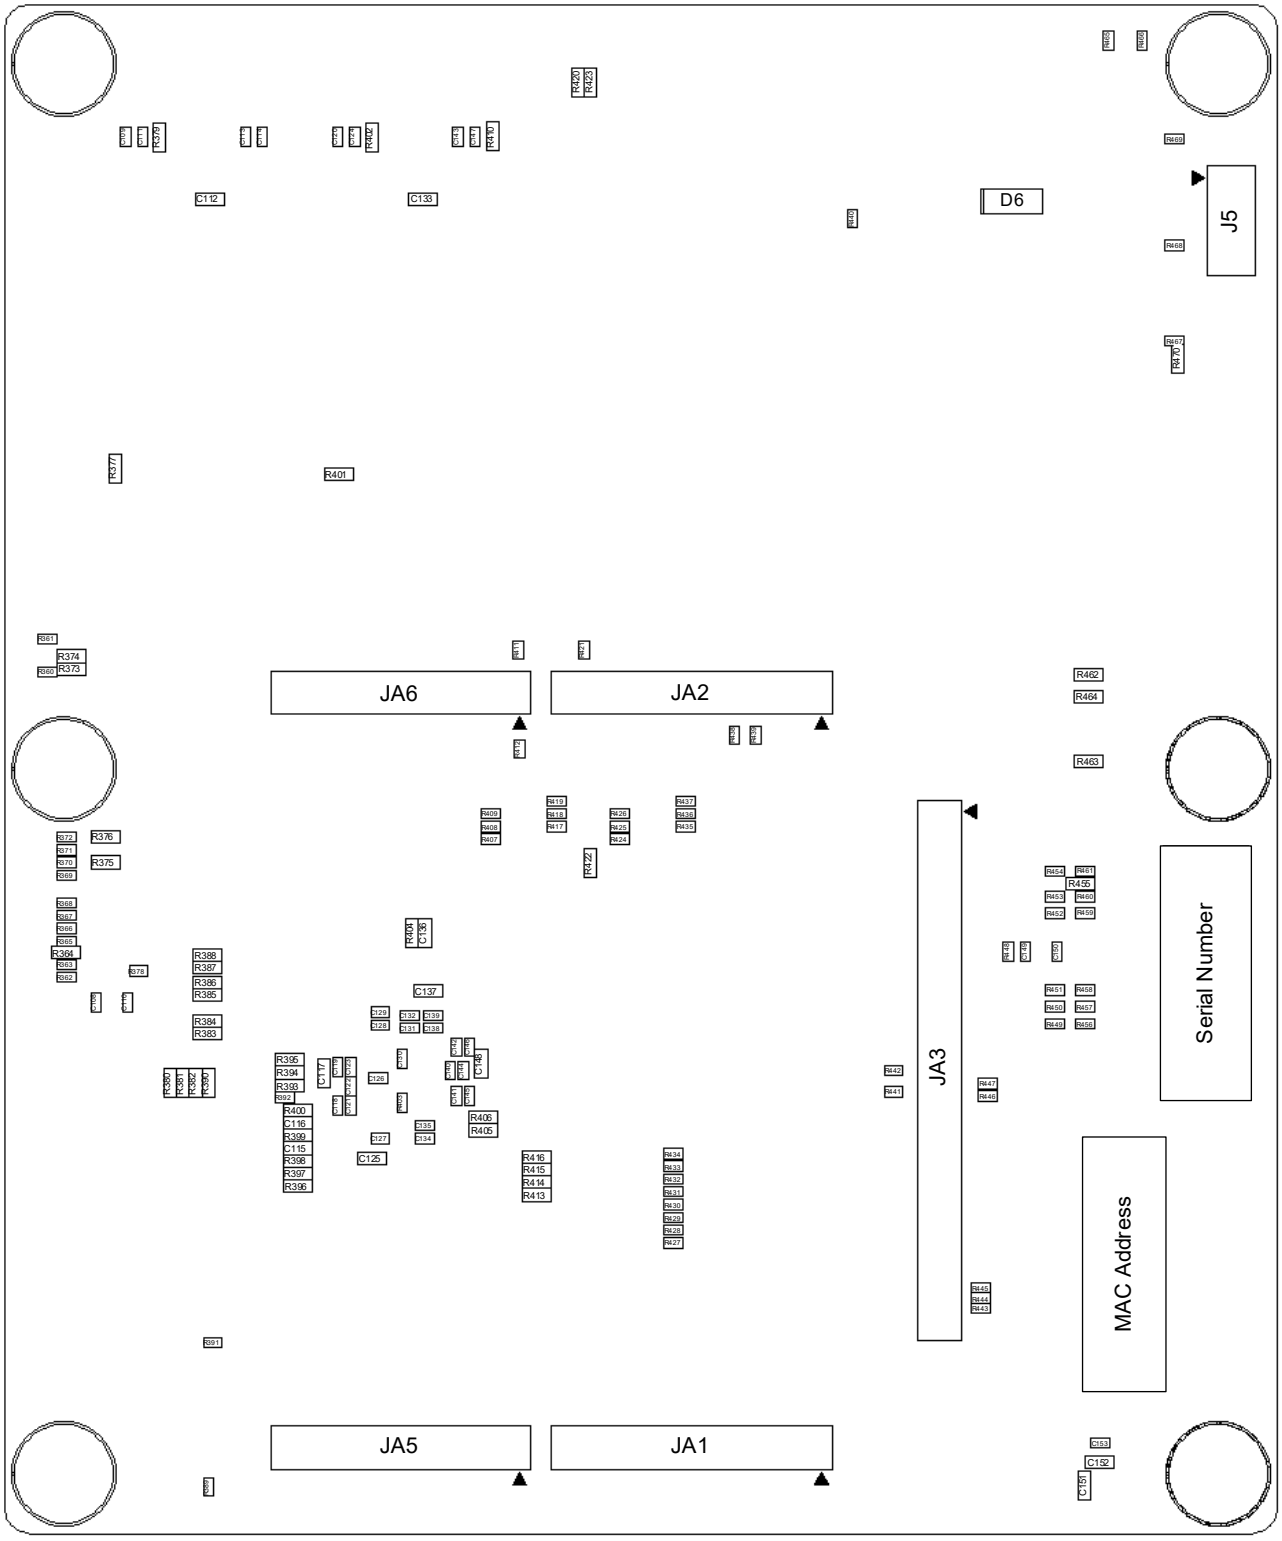

Figure 3-4: Bottom-Side Component Placement

4. Connectivity

4.1 Internal Board Connections

The diagram below shows the CPU board components and their connectivity to the MCU.

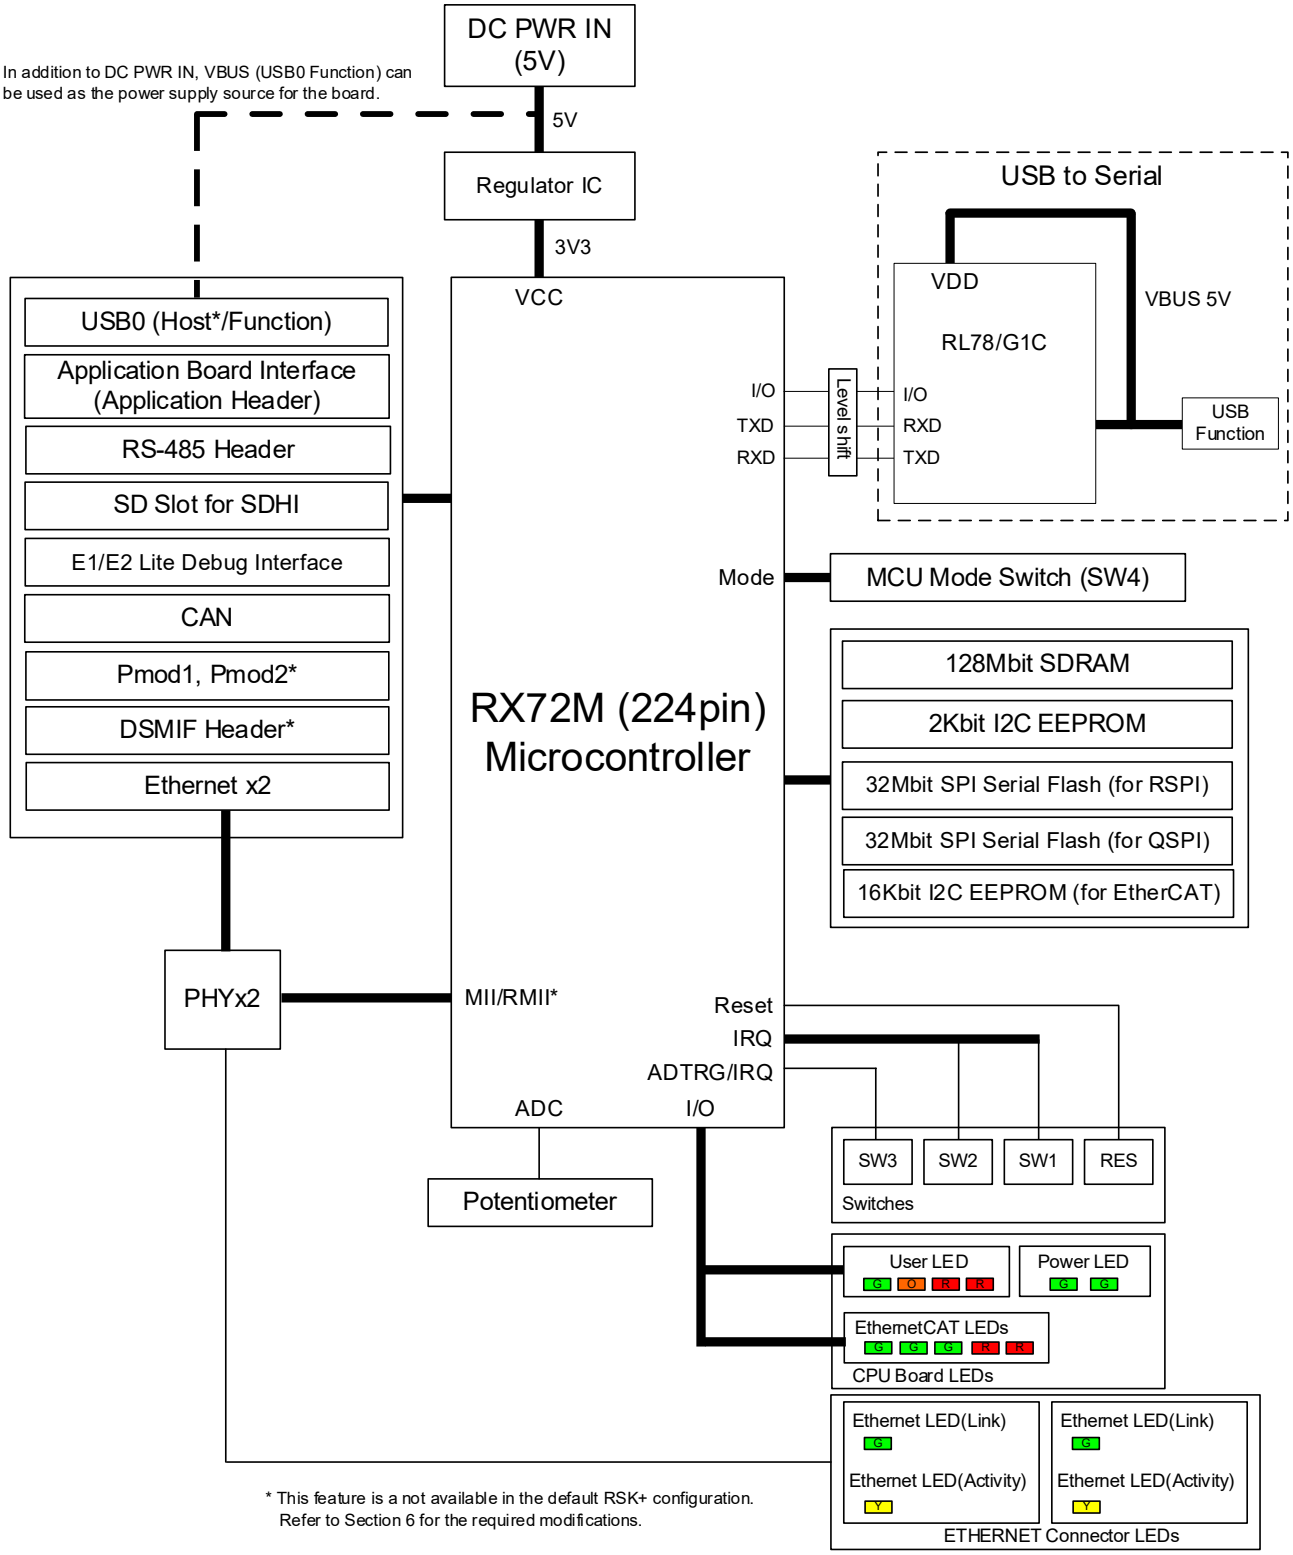

Figure 4-1: Internal Board Block Diagram

4.2 Debugger Connections

Figure 4-2 below shows the connections between the CPU board, E1/E2 Lite debugger and the host PC. The DSMIF connector is the same size as the E1/E2 Lite connector so be careful when connecting.

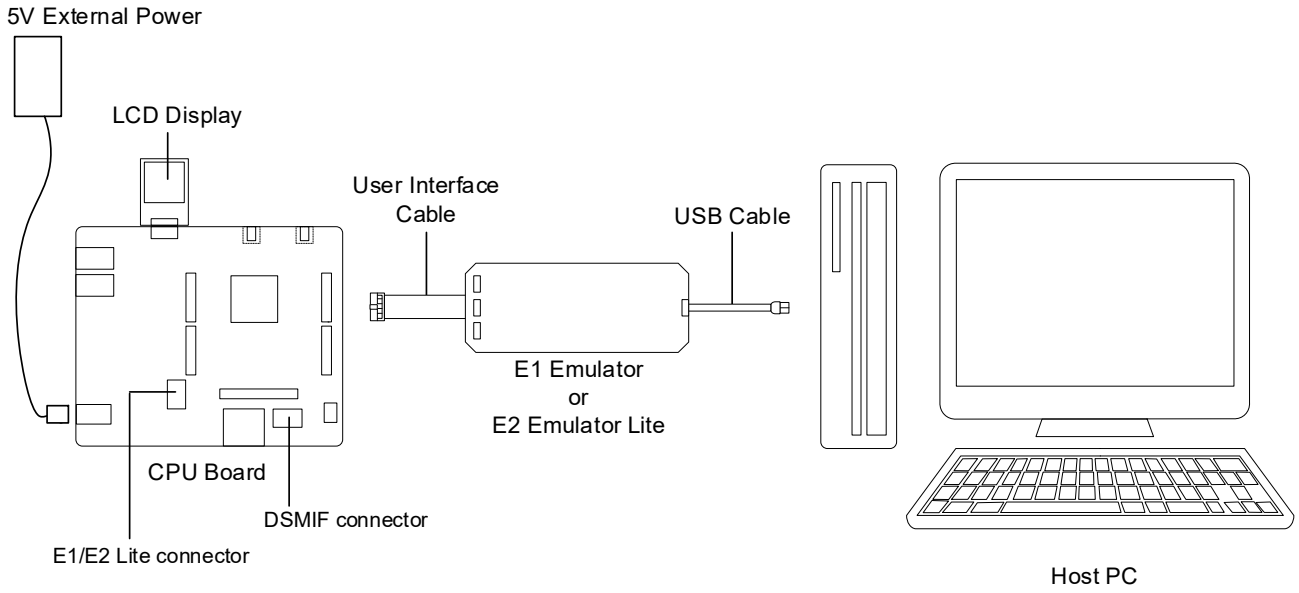

Figure 4-2: Debugger Connection Diagram

5. User Circuitry

5.1 Reset Circuit

A reset control circuit is fitted to the CPU board to generate the required reset signal, and is triggered from the RES switch. Refer to the RX72M Group User's Manual: Hardware for details regarding the reset signal timing requirements, and the CPU board schematics for information regarding the reset circuitry in use on the board.

5.2 Clock Circuit

A clock circuit is fitted to the CPU board to generate the required clock signal to drive the MCU, and associated peripherals. Refer to the RX72M Group Hardware Manual and the RL78/G1C hardware manual for details regarding the clock signal requirements, and the CPU board schematics for information regarding the clock circuitry in use on the CPU board. Details of the oscillators fitted to the board are listed in **Table 5-1** below.

Table 5-1: Crystal

Crystal	Function	Default Placement	Frequency	Device Package
X1	Main MCU crystal for RX72M	Fitted	24MHz	Encapsulated, SMT
X2	Real time Clock for RX72M	Fitted	32.768kHz	Encapsulated, SMT
X3	Main MCU crystal for RL78/G1C	Fitted	12MHz	Encapsulated, SMT
X4	Crystal for Ethernet (RMII)	Fitted	50MHz	Encapsulated, SMT

5.3 Switches

There are six switches located on the CPU board. The function of each switch and its connection is shown in **Table 5-2 and Table 5-3**. For further information regarding switch connectivity, refer to the CPU board schematics.

Table 5-2: Push Switch Connections

Switch	Function	MCU	
		Signal (Port)	Pin
RES	When pressed, the microcontroller is reset.	RES#	G7
SW1	Connects to an IRQ13-DS input for user controls.	P45	D1
SW2	Connects to an IRQ12-DS input for user controls.	P44	C4
SW3	Connects to an IRQ15 input for user controls. Connects to an ADTRG0 input for ADC controls.	P07	E5

Table 5-3: DIP Switch Connections

Switch		Function	MCU	
			Signal (Port)	Pin
SW4	Pin 1	Refer to section 6.2 for the setting contents.	MD/FINED	G4
	Pin 2	Refer to section 6.2 for the setting contents.	PC7	N9
	Pin 3	For PROFINET or User switch.	P60	C10
	Pin 4	For PROFINET or User switch.	PK3	J9
SW5	Pin 1	For EtherCAT-ID or User switch.	PH2	J6
	Pin 2	For EtherCAT-ID or User switch.	P46	B4
	Pin 3	For EtherCAT-ID or User switch.	PQ3	E9
	Pin 4	For EtherCAT-ID or User switch.	P05	C3
	Pin 5	For EtherCAT-ID or User switch.	P72	K15
	Pin 6	For EtherCAT-ID or User switch.	P47	D2
	Pin 7	For EtherCAT-ID or User switch.	PC1	N14
	Pin 8	For EtherCAT-ID or User switch.	PN5	J11

5.4 LEDs

There are 15 LEDs on the RSK+ board. The function of each LED, its colour, and its connections are shown in **Table 5-4**.

Table 5-4: LED Connections

LED	Colour	Function	MCU	
			Port	Pin
3V3 PWR	Green	Indicates the status of the Board_3V3 power rail.	NC	NC
5V PWR	Green	Indicates the status of the Board_5V power rail.	NC	NC
LED0	Green	User operated LED.	P42	B3
LED1	Orange	User operated LED.	PH0	N2
LED2	Red	User operated LED.	PN4	L12
LED3	Red	User operated LED.	P85	N4
LED4	Green	LED for EtherCAT-IN.	PK6	F7
LED5	Green	LED for EtherCAT-OUT.	PK7	P1
LED6	Green	LED for EtherCAT-RUN.	P15	J7
LED7	Red	LED for EtherCAT-ERR.	PH3	L1
LED8	Red	LED for EtherCAT-ERR.	PH3	L1
	Green	LED for EtherCAT-STAT.	PH4	K3
ETHERNET0 Connector	Green	Ethernet LED(Link with Activity / Link)	P34	H2
ETHERNET0 Connector	Yellow	Ethernet LED(Speed / Activity)	NC	NC
ETHERNET1 Connector	Green	Ethernet LED(Link with Activity / Link)	P84	M6
ETHERNET1 Connector	Yellow	Ethernet LED(Speed / Activity)	NC	NC

5.5 Potentiometer

A single-turn potentiometer is connected as a potential divider to analog input AN000, (Port P40, Pin D4). The potentiometer can be used to create a voltage between Board_3V3 and AVSS0.
Refer to the maker site for specification of the potentiometer (VISHAY with part number TS53 series).

The potentiometer offers an easy method of supplying a variable analog input to the microcontroller. It does not necessarily reflect the accuracy of the controller's ADC. Refer to the RX72M Group User's Manual: Hardware for further details.

5.6 Pmod™

The RSK+ board is equipped with connectors for the Digilent Pmod™ interface. Please connect an LCD module that is compatible with the PMOD1 conenctor.

Care should be taken when installing the LCD module to ensure pins are not bent or damaged. The LCD module is vulnerable to electrostatic discharge (ESD); therefore appropriate ESD protection should be used.

The Digilent Pmod™ Compatible headers use an SPI interface. **Figure 5-1** below shows Digilent Pmod™ Compatible Header Pin Numbering. Connection information for the Digilent Pmod™ Compatible header is provided in **Table 5-5 and Table 5-6** below.

Please note that the connector numbering adheres to the Digilent Pmod™ standard and is different from all other connectors on the RSK designs. Details can be found in the Digilent Pmod™ Interface Specification Revision: November 20, 2011.

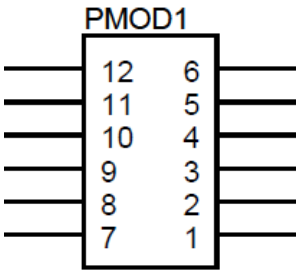

Figure 5-1: Digilent Pmod™ Compatible Header Pin Numbering

Table 5-5: Pmod™1 Header Connections

Digilent Pmod™ Compatible Header Connections							
Pin	**Circuit Net Name**	**MCU**		**Pin**	**Circuit Net Name**	**MCU**	
		Port	**Pin**			**Port**	**Pin**
1	PMOD1-CS	PC5	R10	7	PMOD1-IO0	P30	J5

6	Board_3V3	-	-	12	Board_3V3	-	-

*1: This connection is a not available in the default RSK+ configuration - refer to §6 for the required modifications.

5.7 USB Serial Port

A USB serial port is implemented in a Renesas low power microcontroller (RL78/G1C) and is connected to the RX72M Serial Communications Interface (SCI) module. Multiple options are provided to allow the selection of the connected SCI6 port. Connections between the USB to Serial converter and the microcontroller are listed in **Table 5-7** below.

Table 5-7: Serial Port Connections

Signal Name	Function	MCU	
		Port	Pin
SERIAL-TXD	SCI1 Transmit Signal. *1	PF0	K5
	SCI6 Transmit Signal.	P00	E3
	External RS232 Transmit Signal. *1	-	-
SERIAL-RXD	SCI1 Receive Signal. *1	PF2	J2
	SCI6 Receive Signal.	P01	D5
	External RS232 Receive Signal. *1	-	-
SERIAL-CTS *2	Clear To Send.	P03	D3
SERIAL-RTS *2	Request To Send.	P43	E4

*1: This connection is a not available in the default RSK+ configuration - refer to §6 for the required modifications.

*2: Flow control is a signal provided for expansion and is not currently supported. There is no schedule of function expansion at present.

When the CPU board is first connected to a PC running Windows™ with the USB/Serial connection, the PC will look for a driver. This driver is installed during the installation process, so the PC should be able to find it. The PC will report that it is installing a driver and then report that a driver has been installed successfully, as shown in **Figure 5-2**. The exact messages may vary depending upon operating system.

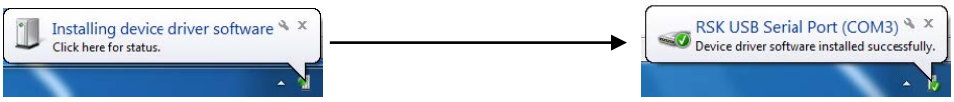

Figure 5-2: USB-Serial Windows™ Installation message

If you do not have the driver, please download the driver installer from the following URL.
https://www.renesas.com/en-eu/software/D6000699.html

5.8 Controller Area Network (CAN)

A CAN transceiver IC is fitted to the RSK+ board, and connected to the CAN MCU peripheral. For further details regarding the CAN protocol and supported modes of operation, please refer to the RX72M Group User's Manual: Hardware. The connections for the CAN microcontroller signals are listed in **Table 5-8** below.

Table 5-8: CAN Connections

CAN Signal	Function	MCU	
		Port	Pin
CAN1TX JA5-CAN1TX *1	CAN Data Transmission.	P32	H5
CAN1RX JA5-CAN1RX *1	CAN Data Reception.	P33	H4

*1: This connection is a not available in the default RSK+ configuration - refer to §6 for the required modifications.

5.9 Ethernet

When running any Ethernet software, a unique MAC address should be used. A unique Renesas allocated MAC address is attached to the PCB as a sticker, and should be always be used with this device ensured to ensure full compatibility when using other Renesas hardware on a common Ethernet connection.

An Ethernet controller IC is fitted to the CPU board, and is connected to the Ethernet MCU peripheral. The RX72M MCU supports full duplex 10Mb/s and 100Mb/s transmission and reception. Refer to §5.4 for information about the Ethernet LEDs. The connections for the Ethernet controller are listed in **Table 5-9, Table 5-10, Table 5-11, Table 5-12** below.

Table 5-9: Ethernet Connections (ETHERNET0)

Ethernet signal	Function	MCU	
		Port	Pin
ET0-TXCLK	MII: Transmit clock	PM6	N13
ET0-TXEN_RMII0TXDEN	MII/RMII: Transmit data valid	PL6	M12
ET0-ETXD0_RMII0TXD0	MII/RMII: Transmit data 0	PL4	R12

Isolate	Disable
Speed	100Mbps
Duplex	Full-Duplex
Auto negotiation	Enable

*1: RMII is not possible with EtherCAT

5.10 EtherCAT Slave Controller (ESC)

To run the EtherCAT slave controller software, the EtherCAT ID number is required. Please use SW5 as necessary.

The CPU board has an EtherCAT slave controller (ESC) and is connected to the ESC module of the microcontroller. EtherCAT status LEDs are listed in §5.4 and dip switches are listed in §5.3. The EtherCAT connections to and from the MCU are shown in **Table 5-13, Table 5-14, Table 5-15**.

Table 5-13: EtherCAT Connections (ECAT-IN)

EtherCAT signal	Function	MCU	
		Port	Pin
ET0-TXCLK	EtherCAT: Transmit clock	PM6	N13
ET0-TXEN_RMII0TXDEN	EtherCAT: Transmit data valid	PL6	M12
ET0-ETXD0_RMII0TXD0	EtherCAT: Transmit data 0	PL4	R12
ET0-ETXD1_RMII0TXD1	EtherCAT: Transmit data 1	PL5	M11

ET-RESn	PHY Reset	PJ3	H7
ET-INTn	PHY Interrupt	P27	L2

*1: For initial setting of PHY, refer to §5.9.

5.11 Universal Serial Bus (USB)

This CPU board is fitted with a USB Host socket (type A) and a Function socket (type Mini B). USB module USB0 is connected to the Host and Function socket, and can operate as either a Host or Function device. The connection for the USB0 module is shown in **Table 5-16** below.

Table 5-16: USB0 Module Connections

USB Signal	Function	MCU	
		Port	Pin
USB0-DP	D+ I/O pin of the USB on-chip transceiver	USB0_DP	R6
USB0-DM	D– I/O pin of the USB on-chip transceiver	USB0_DM	R5
USB0-VBUS	USB cable connection monitor pin	P16	R3
USB0-VBUSEN *1	VBUS (5V) supply enable signal for external power supply chip		
USB0-OVRCURA	External overcurrent detection signals	P14	P4

*1: This connection is a not available in the default RSK+ configuration - refer to §6 for the required modifications.

5.12 RS-485

This CPU board has RS-485 transceiver and header. Connection relations of RS-485 are shown in **Table 5-17, Table 5-18**.

Table 5-17: RS-485 Transceiver Connections

Serial Signal	Function	MCU	
		Port	Pin
RS485-RXD	Serial Transmit data	P86	N3
RS485-TXD	Serial Receive data	PC7	N9
RS485-DE	RS-485 Transmit enable	PL0	H11

Table 5-18: RS-485 Header Connections

Header Pin	RS-485 Signal	Function
1	Board_5V	Board_5V *1
2	ARXP	Receive data +
3	BRXN	Receive data -
4	ZTXN	Transmit data -
5	YTXP	Transmit data +
6	GROUND	GROUND

*1: Since it is not connected at the time of product shipment, please fit R190 if you want to enable it.

5.13 External Bus

The RX72M features an external data bus, which is connected to various devices on the CPU board. Details of the devices connected to the external data bus are listed in **Table 5-19** below. Further details of the devices connected to the external bus can be found in the board schematics.

Table 5-19: External Bus Address Space

Chip Select	Device Name	Device Description	Address Space
CS0	-	Unused	FF000000h – FFFFFFFFh (16Mbyte)
SDCS(SDRAM-SDCSn)	U10	128Mbit SDRAM	08000000h – 0FFFFFFFh (128Mbyte)
SDCS(JA3-CSb)	JA3	Application Header	08000000h – 0FFFFFFFh (128Mbyte)
CS1 – CS2	-	Unused	06000000h – 07FFFFFFh (2 x 16Mbyte)
CS3(JA3-CSa)	JA3	Application Header	05000000h – 05FFFFFFh (16Mbyte)
CS4 – CS5	-	Unused	03000000h – 04FFFFFFh (2 x 16Mbyte)
CS6(JA3-CSc)	JA3	Application Header	02000000h – 02FFFFFFh (16Mbyte)
CS7	-	Unused	01000000h – 01FFFFFFh (16Mbyte)

5.14 SDRAM

The RX72M features an SDRAM controller. It is connected to SDRAM on the CPU board with a 32-bit width. **Table 5-20** gives an Overview of the onboard SDRAM.

Table 5-20: Overview of the onboard SDRAM

Specification	Contents
Type name	MT48LC4M32B2P-6A
Constitution	1Meg x 32 x 4 bank
Capacity	128Mbit
Row address	12bit
Column address	8bit
Number of banks	4
Auto refresh period (tRFC)	Min. 60ns
Initialization auto refresh count	2
Precharge command period (tRP)	Min. 18ns
Auto refresh request interval	15.625us (64ms/4096)
CAS latency (CL)	2 @SDCLK:80MHz
Write recovery period (tWR)	Min. 12ns
ACTIVE-to-PRECHARGE command period (tRAS)	42ns - 120000ns
ACTIVE-to-READ or WRITE delay (tRCD)	Min. 18ns

When accessing SDRAM on the CPU board, make the following settings regardless of the operating frequency of the SDRAM clock. **Table 5-21** shows the On-board SDRAM settings.

Table 5-21: On-board SDRAM settings

Register name	Setting values	Setting details
External Bus Control Register 3 (PFBCR3.SDCLKDRV)	0b0	Use the pin with the SDCLK set for a frequency no higher than 60 MHz.
Drive Capacity Control Register (PORT6.DSCR)	0b0000000x	Normal drive output
Drive Capacity Control Register 2 (PORT6.DSCR2)		
Drive Capacity Control Register (PORT7.DSCR)	0bxxxxxxx0	
Drive Capacity Control Register 2 (PORT7.DSCR2)		
Drive Capacity Control Register (PORT9.DSCR)	0b00000000	
Drive Capacity Control Register 2 (PORT9.DSCR2)		
Drive Capacity Control Register (PORTA.DSCR)		
Drive Capacity Control Register 2 (PORTA.DSCR2)		
Drive Capacity Control Register (PORTB.DSCR)		
Drive Capacity Control Register 2 (PORTB.DSCR2)		
Drive Capacity Control Register (PORTD.DSCR)		
Drive Capacity Control Register 2 (PORTD.DSCR2)		
Drive Capacity Control Register (PORTE.DSCR)		
Drive Capacity Control Register 2 (PORTE.DSCR2)		
Drive Capacity Control Register (PORTG.DSCR)		
Drive Capacity Control Register 2 (PORTG.DSCR2)		

5.15 Renesas Serial Peripheral Interface (RSPI)

The RX72M features three Renesas Serial Peripheral Interface modules (Renesas SPI or RSPI). RSPI2 is connected to a 32Mbit Serial Flash. **Table 5-22** below details the connected devices, and their connections to the MCU.

Table 5-22: RSPI Connections

RSPI signal	Function	MCU	
		Port	Pin
RSPI-CS	Chip Select	P57	P7
RSPI-CLK	Clock	P56	N7
RSPI-MOSI	Master out slave in data	P54	R7
RSPI-MISO	Master in slave out data	P55	R8

5.16 Quad Serial Peripheral Interface (QSPI)

The RX72M features one Quad Serial Peripheral Interface module (QSPI). **Table 5-23** below details the connected device, and its connection to the MCU.

Table 5-23: QSPI Connections

QSPI signal	Function	MCU	
		Port	Pin
QSPI-CS	Chip Select	P76	N12
QSPI-CLK	Clock	P77	L11
QSPI-IO0	I/O Data0	PC3	R11
QSPI-IO1	I/O Data1	PC4	P11
QSPI-IO2	I/O Data2	P80	N10
QSPI-IO3	I/O Data3	P81	L9

5.17 I²C Bus (Inter-IC Bus)

The RX72M features three I²C (Inter-IC Bus) interface modules. RIIC0 is connected to a 2Kbit EEPROM. **Table 5-24** below details the connected device, and their connection to the MCU.

Table 5-24: I²C Bus Connections

I²C Bus signal	Function	MCU	
		Port	Pin
E2P-SDA	Data	P13	N5
E2P-SCL	Clock	P12	R4

5.18 SD Host Interface (SDHI)

A SD Card Slot is fitted to the CPU board, and connected to the SD Host Interface (SDHI) MCU peripheral. For further details regarding the SDHI operation, please refer to the RX72M Group User's Manual: Hardware. The connections for the SDHI signals are listed in **Table 5-25** below.

Table 5-25: SDHI Connections

SD Card Slot (SD1)							
Pin	Circuit Net Name	MCU		Pin	Circuit Net Name	MCU	
		Port	Pin			Port	Pin
1	SDHI-D3	P17	P2	2	SDHI-CMD	P20	P3
3	GROUND	-	-	4	SDHI-PE(SDHI-VCC)	PF5	G6
5	SDHI-CLK	P21	R1	6	GROUND	-	-
7	SDHI-D0	P22	N1	8	SDHI-D1	P23	M2
9	SDHI-D2	P87	R2	10	SDHI-CD	P25	M3
11	GROUND	-	-	12	SDHI-WP	P24	L4

5.19 Delta-Sigma Modulation Interface (DSMIF)

The RX72M microcontroller has six channels of Delta-Sigma Modulation Interface (DSMIF), of which 4 channels are connected to the 14 pin connector for DSMIF. **Table 5-26** shows the connection relationship.

Table 5-26: DSMIF Connections

DSMIF *1							
Pin	Circuit Net Name	MCU		Pin	Circuit Net Name	MCU	
		Port	Pin			Port	Pin
1	Board_5V	-	-	2	Board_3V3	-	-
3	Board_5V	-	-	4	Board_3V3	-	-
5	DSMCLK3	P71	J13	6	DSMDATA3 *2	P72	K15
7	DSMCLK2 *2	P74	R14	8	DSMDATA2 *2	P75	R13
9	DSMCLK1	P83	M9	10	DSMDATA1 *2	P56	N7
11	DSMCLK0 *2	P33	H4	12	DSMDATA0 *2	P34	H2
13	GROUND	-	-	14	GROUND	-	-

*1: Note that the number of pins and the pitch width are the same as the E1 / E2Lite interface.
*2 This connection is a not available in the default RSK+ configuration - refer to §6 for the required modifications.

6. Configuration

6.1 Modifying the RSK+

This section lists the option links that are used to modify the way CPU board operates in order to access different configurations. Configurations are made by modifying link resistors or headers with movable jumpers or by configuration DIP switches

A link resistor is a 0Ω surface mount resistor, which is used to short or isolate parts of a circuit. Option links are listed in the following sections, detailing their function when fitted or removed. **Bold, blue text** indicates the default configuration that the CPU board is supplied with. Refer to the component placement diagram (§3) to locate the option links, jumpers and DIP switches.

When removing soldered components, always ensure that the CPU board is not exposed to a soldering iron for intervals greater than 5 seconds. This is to avoid damage to nearby components mounted on the board.

When modifying a link resistor, always check the related option links to ensure there is no possible signal contention or short circuits. Because many of the MCU's pins are multiplexed, some of the peripherals must be used exclusively. Refer to the RX72M Group User's Manual: Hardware and CPU board schematics for further information.

In the table in this section, "pin" expression is omitted, so please read as follows.
Example: U9.4 -> U9.4pin
J7(1-2 short) -> J7(1pin-2pin short)

6.2 MCU Operating Modes

Table 6-1 below details the option links associated with configuring the MCU Operating Modes.

Table 6-1: MCU Operating Modes Switch Settings

SW4 Pin1	SW4 Pin2	J14 *1	Configuration	Related Links.
OFF	**OFF(don't care)**	**Open(don't care)**	**Single Chip Mode**	**R153**, R166, R156, **J12**
OFF	**OFF**	**Open(don't care)**	**Boot Mode(FINE Interface)**	**R153**, R166, R156, **J12**
ON	OFF	don't care	SCI Boot Mode	**R153**, R166, R156, **J12**
ON	ON	Open	USB Boot Mode (Bus-powered)	**R153**, R166, R156, **J12**
		Shorted	USB Boot Mode (Self-powered)	**R153**, R166, R156, **J12**

*1: Jumper J14 is not mounted on the board at the time of product shipment.

6.3 E1/E2 Lite Debugger Configuration

Table 6-2 below details the function of the option links associated with E1/E2 Lite Debugger Configuration.

Table 6-2: E1/E2 Lite Debugger Configuration Option Links

Signal name	MCU		MCU Peripheral Selection			Destination Selection		
	Pin	Port	Signal	Fit	DNF	Interface /Function	Fit	DNF
PC7	N9	PC7	**RS485-TXD**	**J12 (1-2pin short)**	**R166, R156**	**U9.4**	-	-

			DSW-MD_FINED	-	-	**SW4.1**	-	-

Table 6-3 below details the function of the jumpers associated with the E1/E2 Lite Debugger.

Table 6-3: E1/E2 Lite Debugger Configuration Jumper Settings

Reference	Jumper Position	Configuration	Related Links.
J17(DNF) *1	**Shorted Pin1-2**	**Enable E1/E2 Lite normal debugging and MCU single operation (without E1/E2 Lite).**	**R350**
	Shorted Pin2-3	Enable E1/E2 Lite debugging with Hot plug-in function.	-
	All open	DO NOT SET	-

*1: Jumper J17 is not fitted on the default CPU board. Same as Jumper Position “shorted pin1-2” setting by resistor R350.

6.4 Power Supply Configuration

Table 6-4 below details the function of the option links associated with Power Supply Configuration.

Table 6-4: Power Supply Configuration Option Links

Reference	Configuration	Fit	DNF	Related Links.
VBUS0	Connect 5V Power rail to VBUS0.	J16.shorted, **J8.Pin1-2**	-	**U6.1, U6.2**
Unregulated_VCC	**Connect 5V power rail to Unregulated_VCC.**	**R304**	-	**U6.1, U6.2**
JA1-5V	**Connect 5V power rail to JA1-5V.**	**R325**	-	**U6.1, U6.2**
USB_5V	**Connect 5V power rail to USB_5V.**	**R303**	-	**U7.2, U7.3**
Board_5V	**Connect 5V power rail to Board_5V.**	-	-	**U6.1, U6.2**, U3.8
SD_3V3	**Connect 3.3V power rail to SD_3V3.**	**R338**	-	**U8.2, U8.3**
JA1-3V3	**Connect 3.3V power rail to JA1-3V3.**	**R254**	-	**JA1.3**
Board_3V3	**Connect 3.3V power rail to Board_3V3.**	-	-	**U3.8**
UC_VCC	**Connect 3.3V power rail to UC_VCC.**	J15.Short or (R158 or R73 or R163 or **R136**)	-	**U1, R53, R143, R154**
	Enable current probe for measurement MCU current consumption.	-	**J15.Open** and (**R158, R73, R163**, R136)	**U1, R53, R143, R154**
VBATT	**Connect UC_VCC power rail to VBATT.**	**R224**	**R223**	**U1**
	J13 *1 connected to VBATT of MCU	R223	R224	**U1**

*1: J13 is a power connector for VBATT, not a jumper. Do not short-circuit J13 Pin 1 and Pin 2 because the power supply is directly connected to ground.

Table 6-5 below details the function of the jumpers associated with the Power Supply Configuration.

Table 6-5: Power Supply Configuration Jumper Settings

Reference	Jumper Position	Configuration	Related Links.
J15(DNF) *1	**Shorted**	**Connect 3.3V power rail to UC_VCC.**	R158, R73, R163, **R136**
	All open	Enable current probe for measurement MCU current consumption.	
J16(DNF) *2	Shorted	Enable VBUS0.	**J7**
	All open	**Disable VBUS0**	**J7**

*1: Jumper J15 is not fitted on the default CPU board. Fitting resistor R136 has the same effect as "shorting" jumper J15.

*2: Jumper J16 is not fitted on the default CPU board.

6.5 Clock Configuration

Table 6-6 below details the function of the option links associated with Clock Configuration.

Table 6-6: Clock Configuration Option Links

Reference	Configuration	Fit	DNF	Related Links.
XTAL, EXTAL	**Connect 24MHz crystal (X1) to RX72M.**	**R72, R93**	**R70**	**U1.H1, U1.J1**
	Connect JA2-EXTAL to RX72M.	R70	R72, R93, **R97**	U1.J1
XCIN, XCOUT	**Connect 32.768kHz crystal (X2) to RX72M.**	**R110, R106**	**R114**	**U1.F1, U1.G1**
	Disconnect X2 from RX72M.	R114	R110, R106	-

6.6 Analog Power, ADC and DAC Configuration

Table 6-7 below details the function of the option links associated with Analog Power, ADC and DAC Configuration.

Table 6-7: Analog Power, ADC and DAC Configuration Option Links

Signal name	MCU		MCU Peripheral Selection			Destination Selection		
	Pin	Port	Signal	Fit	DNF	Interface /Function	Fit	DNF

Table 6-35 below details the function of the jumpers associated with the USB Configuration.

Table 6-35: USB Configuration Jumper Option Links

Reference	Jumper Position	Configuration	Related Links.
J7(DNF) *1	Shorted Pin1-2	Self-powered	**J8, R26**
	Shorted Pin2-3	Bus-powered	**J8,** J16**, R26**
	All open	**Self-powered by R26**	**J8**
J8	**Shorted Pin1-2**	**USB0 Function mode**	J7**, R26**
	Shorted Pin2-3	USB0 Host mode	-
	All open	DO NOT SET.	-

*1: If J7 is fitted, remove R26.

When using USB in function mode, be sure to set J8 to 1-2 Short. Also, do not plug in both USB0_1 and USB0_2 cables at the same time.

7. Headers

7.1 Application Headers

This RSK+ board is fitted with application headers, which can be used to connect compatible Renesas application devices or as easy access to MCU pins.

Table 7-1 below lists the connections of the application header, JA1.

Table 7-1: Application Header JA1 Connections

Application Header JA1

8. Code Development

8.1 Overview

For all code debugging using Renesas software tools, the RSK+ board must be connected to a PC via an E1/E20/E2 Lite debugger. An E1/E2 Lite debugger is supplied with this RSK+ product.

For further information regarding the debugging capabilities of the E1/E20/E2 Lite debuggers, refer to E1/E20 Emulator, E2 Emulator Lite Additional Document for User's Manual (R20UT0399EJ).

8.2 Compiler Restrictions

The compiler supplied with this RSK+ is fully functional for a period of 60 days from first use. After the first 60 days of use have expired, the compiler will default to a maximum of 128k code and data. To use the compiler with programs greater than this size you need to purchase the full tools from your distributor.

The protection software for the compiler will detect changes to the system clock. Changes to the system clock back in time may cause the trial period to expire prematurely.

8.3 Mode Support

The MCU supports Single Chip and Boot Modes (SCI, USB, FINE), which are configured on the RSK+ board. Details of the modifications required can be found in §6.2. All other MCU operating modes are configured within the MCU's registers, which are listed in the RX72M Group User's Manual: Hardware.

Only ever change the MCU operating mode whilst the RSK+ is in reset, or turned off; otherwise the MCU may become damaged as a result.

8.4 Debugging Support

The E1 Emulator or E2 Emulator Lite (as supplied with this RSK+) supports break points, event points (including mid-execution insertion) and basic trace functionality. It is limited to a maximum of 8 on-chip event points, 256 software breaks and 256 branch/cycle trace. For further details, refer E1/E20 Emulator User's Manual (R20UT0398EJ) or E2 Emulator Lite User's Manual (R20UT3240EJ).

8.5 Address Space

For the MCU address space details, refer to the 'Address Space' section of RX72M Group User's Manual: Hardware.

8.6 Note of Flash Access Window Setting Register

This register is used to set the write protection flag and start-up area select flag for setting the flash access window start address, flash access window end address, and access window.

Once 0 is written to this bit, the bit can never be restored to 1.
Therefore, the access window and the BTFLG bit will never be set again. If set the TM function will never be disabled, once enabled. Exercise extra caution when handling the FSPR bit.

For details, refer to Section 7.2.9 in the RX72M Group User's Manual: Hardware.

9. Additional Information

Technical Support

For information about the RX72M Group microcontrollers refer to the RX72M Group Hardware Manual.

For information about the RX assembly language, refer to the RX Family Software Manual.

Technical Contact Details

Please refer to the contact details listed in section 8 of the "*Quick Start Guide*"

General information on Renesas microcontrollers can be found on the Renesas website at:
https://www.renesas.com/
